The Saṃvarodaya-tantra

Selected Chapters

by

Shinichi Tsuda

This thesis is submitted for the degree of

Doctor of Philosophy

in the Australian National University

This thesis is based on original research conducted by the author while he was a Research Scholar in the Department of South Asian and Buddhist Studies at the Australian National University from 1967 to 1970.

PREFACE

This work contains nineteen chapters selected from the total thirty-three chapters of the Samvarodaya-tantra; some chapters have been omitted because it was impossible to arrive at an adequate reconstruction of the Sanskrit text; other chapters have been omitted because I was not interested in their contents. Since it is our aim to prepare a Sanskrit text to serve as basic material for the future study of tantric Buddhism, it is preferable to present all the chapters of this tantra; but the limitation of time and my own lack of ability made this impossible at present; I hope to complete the task in the future.

This present work does not contain a chronological study of this tantra. The one and only item of internal evidence for the date of this tantra that we have acquired so far is found in chapter six. This chapter contains several verses which also occur in the vajrajāpa-krama of the Pañcakrama of Nāgārjuna; if we compare chapter six of our text with the vajrajāpa-krama, it becomes immediately evident that these verses are borrowed from the Pañcakrama but not otherwise. This evidence alone shows already that this tantra cannot be earlier than the late eighth century. We plan to accumulate further evidence and to establish the mutual relationship and chronological sequence of the tantras of the Samvara literature.

I chose this Samvarodaya-tantra as the subject of my Ph.D. thesis when I was awarded a scholarship from the Australian National University. For a number of reasons I thought that the task of editing this tantra would provide basic training in Sanskrit philology, since enough manuscripts were available; I could have chosen almost any other tantra, since there are as yet few critical editions. At that time,

I knew little about the Saṃvara literature; I simply imagined the Saṃvarodaya-tantra to be an important text; now I am convinced that this surmise was not wrong.

Having come to the end of my Ph. D. course, I wish to acknowledge my great debt of gratitude to Professor J.W. de Jong of the Department of South Asian and Buddhist Studies, School of General Studies, to Professor A.L. Basham of the Department of Asian Civilizations, School of General Studies, and to Mrs. L.A. Hercus, Senior Lecturer in the Department of South Asian and Buddhist Studies.

It was only through the kindness and the tenacious efforts of Professor de Jong that a Ph. D. scholarship was awarded to me, since I was not competent in the English language. As a supervisor, he very patiently guided me, as I was insufficiently trained in the Sanskrit language; every detail of my thesis has received his supervision. Professor Basham very kindly supervised me during the sabbatical leave of Professor de Jong; he corrected every line of my translation of chapter thirteen of the Saṃvarodaya and rendered it in his own excellent style; he thus provided me with a model translation which I attempted to imitate in other chapters. Without the guidance and assistance that I have received I would not have been able to complete this present work.

I wish to acknowledge my indebtedness to the School of General Studies in the Australian National University, to the Library of the Institute of Advanced Studies in the Australian National University, and to the National Library of Australia.

INTRODUCTION

I. Materials Employed

1). Sanskrit Manuscripts.

For the edition of the Śrī-mahāsaṃvarodaya-tantrarāja, the following eight manuscripts have been used:

- A: MS belonging to the University of Tokyo (Matsunami's Catalogue No.404). Dated 1595 A.D..
- B: MS belonging to the University of Tokyo (Matsunami's Catalogue No.403). Not dated.
- C: MS belonging to the University of Tokyo (Matsunami's Catalogue No.401). Dated 1751 A.D..
- I: MS belonging to the Asiatic Society of Bengal (H.P. Śāstrī's Catalogue of ASB No.59). Dated 1828 A.D..
- D: MS belonging to the University of Tokyo (Matsunami's Catalogue No.402). Dated 1852 A.D..
- E: MS belonging to the University of Tokyo (Matsunami's Catalogue No.405). Dated 1912 A.D..
- P: MS belonging to Bibliothèque Nationale of Paris (Cabaton's Catalogue of Paris No.194). Not dated.
- L: MS belonging to Royal Asiatic Society, London (Cowell and Eggeling's Catalogue of RAS No.38). Not dated.

There is an incomplete MS of 9 leaves belonging to the Asiatic Society of Bengal (H.P. Śāstrī's Catalogue of ASB No.60), which seems to be a very old MS written on palm leaves. We did not use this MS as the photo-copy is too blurred. Three more MSS are known to exist; one MS belonging to the University of Kyoto and two MSS belonging to the Bir Library. However, we have not been able to obtain photo-copies.

Of these the oldest MS A contains on the whole grammatically correct readings and sometimes contrasts very clearly with other MSS; and this fact is the main evidence for our supposition that the author of the Saṃvarodaya-tantra did intend to write correct Sanskrit.

MS B was provisionally placed between A and C only because the script and paper seem to be rather old. This is only an impression, but there is no clear evidence to the contrary.

MS C is very different from the other MSS with regard to the size of the leaves; each leaf contains seven long lines and it reproduces the text of about two leaves of other MSS. Its readings are sometimes similar to B and P which are not dated and this makes us think that it is closely related to them.

I and D apparently give the impression that they are more closely connected with each other than with all other MSS. MS D accords with MS I so closely in all its details that we may well suppose that it was transcribed from I but for the fact that D omits some 26 lines between dakṣiṇe rasana- (7-16) and samyag anuttaraphalam icchati (8-3). It shows that one leaf was lost from the manuscript (pre-D, for convenience' sake) which was based upon I; and after the omission of this leaf, the scribe of D copied this pre-D, directly or indirectly, without noticing the omission. The beginning and the end of this omission in D do not accord with the beginning and the end in I. This proves that D did not directly descend from I.

The scribe of I or of the manuscript on which I is based (pre-I) must have had some knowledge of grammar and scansion, with the help of which he corrected the text and made his own copy, that is, I or pre-I. Therefore, I and D very frequently offer grammatically and metrically more acceptable readings,¹ though they are more remote from the original and are not to be adopted. These readings, showing

1

For example, I dandāksakundikā vame is grammatically better than dandāksakundikā vame (23-21). ID yasya cintitasādhyan tu is metrically better than yasya cintitasādhyan (10-22). ID viddhva vicintayet is metrically better than viddhva cintayet (10-40). The word rupa in rūpavaidūryasuprabhah (23-27) has no meaning; tib. does not translate it satisfactorily. ID give the reading rūpya-; this makes good sense, but is not attested by tib..

how the scribe understood the meaning of a passage, are helpful to our understanding of the passage.

MS E sometimes resembles D and sometimes A. P resembles B and C.

From its paleographical features, MS L seems to be a quite recent manuscript; it is actually the most corrupt one. It was perhaps copied from a manuscript the first leaf of which was intermixed with that of the Hevajra-tantra. But, L sometimes accords in details with A and gives the impression of a remote descendant of A; it shows sufficient evidence of corruption in the course of transmission.

In the process of collating these MSS, we sometimes notice resemblances between certain MSS; but whenever we try to assume some genealogical relation between them, we quite easily find its counter-evidence.

It is also difficult to establish the stemma on the basis of sporadic discrepancies between certain MSS. Generally these discrepancies consist of interpolation or omission of only one or two lines. They suggest the following relations between the MSS: B-D-E (2-19); I-L-tib. (tib. = the Tibetan version) (5-38); E-I-L-tib., A-B-C-D-P (5-62); I-L-tib., A-B-C-D-E-P (5-64); B-D-E (5-67); I-P-L (10-5); B-P-L-tib., C-I-D, A-E (13-16); A-P (17-27); chapter 32 has not been included in our edition; it shows a disorder in the lines which suggests relations between A-E-P and between B-C-I-D-L. The most important data are provided by chapter 8: verse 30' is omitted in tib.; verses 32', 33', 34' and 35' are omitted in tib. A, I, and L; verse 36' is omitted in tib., A and L; and this suggests relations between C-I-P; verse 37' is omitted in tib., A, I, P and L; and at the same time this suggests relations between C-D-E.

These examples are still not sufficient to modify our impression that these eight MSS, the Tibetan version and perhaps the version used by Ratnaraksita accord quite well with each other, not in the details

but in their interpolations or omissions, and that they show only few indications of transmissional changes.

The Colophons of these manuscripts, which are written in very corrupt Sanskrit, suggest that this tantra, as well as other tantras, must have been frequently copied in Nepal for the purpose of accumulating religious merit for the clergy and the laity, and that a large number of manuscripts must have existed.

This fact is reflected in our manuscripts. If we attempt to relate from the readings of the words a certain MS to others, we come upon counter-evidence. Even the data, provided by interpolation or omission, are mutually contradictory. Consequently, in the process of constructing the stemma, we have to be rather bold in ignoring minute contradictions, and we have to consider the following stemma as entirely provisional.

Orthographical and paleographical problems such as occurring in such Nepalese manuscripts as used by us have already been thoroughly discussed by Brough in "The language of the Buddhist Sanskrit texts" (BSOAS, xvi, 1954, pp.351-75); we have found nothing to add to this.

2) Tibetan translation.

dPal bde mchog hbyun ba shes bya bahi rgyud kyi rgyal po
chen po. Peking No.20, Vol.2.

The Tibetan text presented in our edition is based upon a collation of following five editions: sDe dge, sNar thañ, Peking, Co ne and Lha sa; but, different readings of these editions are not given in the notes, even when the reading of all the editions appears to be incorrect and "the correct reading" is to be substituted for it.²

Disorder of folios or verses in these editions is, if any, negligible.

Discrepancy between the Sanskrit text and the Tibetan translation is not notable except in one case in the twenty-third chapter. Here, it is very difficult to decide which of the two gives the original text; both are possible. The only means which might have helped us to reach a decision is to examine the order of quotations found in Ratnaraksita's Pañjika; but in this particular instance the Pañjika could not be used because it does not quote this part of chapter 23 in full.³ Ratnaraksita's version seems to bear a closer resemblance to the Sanskrit text rather than the Tibetan text. It is not possible to find whether this discrepancy existed in the version used by the Tibetan translation or originated in the translation itself, granted that the meaning given by the Sanskrit text is the original one. In our edition, the text of the Tibetan translation has been rearranged to the Sanskrit text.⁴

2

For example, Peking sbyin dkañ bañ; sDe dge, sNar thañ, Co ne and Lha sa sbyañ dkañ bañ are corrected into sbyañs dkañ bañ (9-23); Peking hdab me; sDe dge, Co ne and Lha sa hdab ma; sNar thañ mdab ma into mdag ma (10-19); dbañ po in all the editions into dpah bo (3-6); bcug nas ni into bkug nas ni (5-36); mtshan khuñ into mthan khuñ (7-8); gsiñ rjeñi lto bar into gsiñ rjeñi lta bar (19-23); brgyad char into brgya char (26-45); dran bar bya into drañ bar bya (31-9).

3

Until verse 20 Ratnaraksita gives verbatim explanation; but after this, he gives the "summarized meaning" (bsdus pañi don) (Vol.51, 107-4-4 f.).

4

From the fourth pada of verse 24 dañ por sbyin sreg sbyin par bya to the third pada of verse 40 hjigs pañi rnam pa hdi ltar mthoñ originally followed after verse 52. The fourth pada of verse 40 mi hjigs pa ni chen po ston was originally between the second and the third pada of

3) Commentaries.

Ratnarakṣita's Pañjikā: dPal sdom pa hbyuñ baḥi rgyud kyi rgyal
po chen poḥi dkah hgreḥ padma can shes bya ba. No.2137, Vol.51.

Kṣāntiśrī's Sādhana: dPal sdom pa hbyuñ baḥi sgrub thabs.

No.2230, Vol.52.

Bu ston's Sādhana: dPal bde mchog hkhor lo sdom pa hbyuñ baḥi
sgrub thabs. The Collected Works of Bu-ston, edited by
 Lokesh Chandra, New Delhi, 1967, Volume 7 (JA), 465-490.

Bu ston's Maṇḍala-vidhi: dPal bde mchog sdom pa hbyuñ baḥi dkyil
hkhor gyi cho ga. op.cit.491-606.

Two commentaries i.e. Saṃvarodayatantrasya pañjikāvyaḥyā and
Saṃvarodayatantrasya unaviṃśatipāṭalavyākhyā are said to be preserved
 in the Bir Library;⁵ but they were not accessible to us.

Titles of other tantras and commentaries referred to in our
 edition are given, for convenience' sake, in abbreviated Sanskrit
 form together with their numbers in the reprinted Peking edition (The
Tibetan Tripitaka, edit by D.T. Suzuki, Tokyo-Kyoto, 1955-1961). For
 each quotation from these texts, volume, page, leaf and line of the
 reprinted Peking edition are given. Details of other edited Sanskrit
 texts and other references can be found in the notes.

4 contd

of verse 41. Two pādas, identical with the third and the fourth pāda
 of verse 51, followed after the mantra of verse 25; but these have
 been omitted in our edition.

See Ryūjō Yamada: Bongo-Butten no Shobunken, Kyoto, 1959, p.174.

II. Method of Editing the Text

Dr D.L. Snellgrove states clearly, in the Note on the Text of The Hevajra Tantra. A Critical Study. Part II, the policy which he adopted in editing the Sanskrit text of the Hevajra-Tantra (abbrev. Hevajra). This is the first and the only methodological reflection upon the procedure of editing a Buddhist tantra so far, we should therefore note carefully what he says about his method, paying attention especially to the connection between this method and material he employed. Then, we should apply this method to the Saṃvarodaya-tantra (abbrev. Saṃvarodaya) and examine whether it is effective.

In editing Hevajra, he first ascertained the intended sense of the text, and then edited the manuscripts accordingly, reversing the normal course of procedure, that is, first to establish a reliable text by a careful collation of the available manuscripts, and then to interpret it in accordance with the rules of grammar and syntax.

His excuse for his own method is that 'this is the most certain method of procedure, when one is dealing with manuscripts so manifestly rife with error as are the available manuscripts of the Hevajra-tantra', and that 'the primary concern is to learn the contents of the work and establish its relationship to a general cultural background'.

He regards the Tibetan translation as the most reliable version because it reproduces an original text much older than the nineteenth-century Nepalese MSS. He gives precedence to the commentaries over the extant manuscripts as they refer to versions of the text dating from the ninth to eleventh centuries. He says, 'in fact these two powerful aids, Tibetan translation and commentarial works, are in themselves sufficient to provide us

with a satisfactory translation of the whole work, while the manuscripts taken alone are not'.

Thus he arrives at the conclusion that the actual editing of the Sanskrit text should follow rather than precede our understanding of it, though he is well aware of the fact that it is 'the second best thing'.

He justifies his method by the following argument:

'In order that a text should serve as a reliable guide, it is necessary that the editor should first be able to edit with some consistency, and in order to do this he must feel confident that the original text which he is attempting to restore was a correct text, the scansion, grammar, and syntax were originally regular. In a choice between several readings he would then logically choose the one that was correct and in restoring corrupt passages he would pay full regard to regular scansion. But in the case of the Hevaja-tantra there can be no such confidence.'

'Since this is so, it is clearly impossible to hope to provide a satisfactory edition of such a text. One's aim, of course, should be to produce a version as close to the original as possible, but there is a great difference between attempting to restore an originally perfect text and an originally imperfect text, for in the latter case we are deprived of the chief measure of success, namely the correctness of the restored version.'

'In our case therefore we have had to be content with the next best thing, namely a text that accords with the required sense as it may be ascertained from the Tibetan translation and the several commentaries.'

Thus following his line of argument, what we immediately notice is, firstly, his excessive reliance on the Tibetan translation and on the commentaries. They are certainly of great

value for understanding a work; but before deciding that they are 'of far more value than a Sanskrit manuscript alone', we would need more proof. It would be necessary for us to examine their usefulness with regard to editing a Sanskrit text, and to investigate the nature of the information to be obtained from them.

Secondly, his argument could be carried so far that one would be able to assert that it is not necessary to edit the Sanskrit text at all. As long as his primary concern is to learn the contents of the work and to establish its relationship to a general cultural background, it is a matter of course that he should be content with only ascertaining, if possible, the meaning of the text; the next step, that is, to edit the manuscripts, is not necessary any more.

But, as our aim is not to reconstruct the Sanskrit text on the basis of the Tibetan version, but to edit the Sanskrit text so as to obtain a basic material for future study, it is our fundamental thesis that the Sanskrit manuscripts are the chief authority, and that the Tibetan version and the commentaries are to be treated as of a subsidiary nature with the understanding that they should actually be more reliable.

In the case of the Samvarodaya we have obtained the impression that the Tibetan translation and the commentaries are not in themselves sufficient to provide us with a satisfactory version of the whole work.

The Tibetan translation of the Samvarodaya is as unreliable as that of Hevajra. Generally speaking, the utility of the Tibetan translation of a work lies in the fact that it enables us to know which words occur in the Sanskrit version used by the translator, besides giving us a general idea of the whole passage. Sanskrit words restored from the Tibetan translation are, admitting that they reflect a far earlier version than the one presented by the extant manuscripts, to be examined on the same level as words occurring in

Sanskrit manuscripts. In addition to this indirectness, which in principle qualifies the Tibetan translation as material of a subsidiary nature, we have to take account of the following facts: inevitable discrepancy between Sanskrit words and their Tibetan translation, misunderstandings or mistranslations by the translator, and above all our own misunderstandings caused by the inherent ambiguity of the Tibetan language or by our own incompetence.

Ratnaraksita's Pañjikā, the only commentary of the Samvarodaya preserved in the bsTan hgyur reproduces a version of the text dating from the twelfth century, but as its quotations of the text are rather sporadic, this commentary does not always help us in restoring the Sanskrit words and in deciding their own context. In the case of sādhanas, the state of things is not fundamentally different. They are closely connected with a certain chapter of the text, for example Ksāntiśrī's Sādhana is connected with the thirteenth chapter of the Samvarodaya, and is certainly of great help for the understanding of that chapter, but not of other chapters.

To mention one example of the danger inherent in excessive reliance on the Tibetan material: Hevajra I, vii, 4 and Samvarodaya 9-4 are identical. Snellgrove's reconstruction paṭaṃ samdarsāyed yas tu trisūlaṃ tasya darsāyed looks reasonable since the Tibetan translation has gañ zig gos ni ston pa la // de yi rtse gsum rab tu bstan //. In the case of the Samvarodaya, from the available materials: that is the MSS readings paṭaṃ sam- AD pratisaṃ; BEP patan; C pataśaṃ; I lalātan; L saṃputī; tib. sDe dge ba ti sa; sNar thañ, Co ne pa ni sa; Peking ba ni sa; Lha sa pa ti sa; and from the context, in which something corresponding to trisūla is required, we reconstruct paṭisaṃ (= paṭisaṃ MS C) samdarsāyed yas tu trisūlaṃ tasya darsāyed. Since we have not yet examined more materials than those presented by Snellgrove, we have no right to

decide that his reconstruction is wrong; but still this example may suggest that the usefulness of Tibetan translations has its limitations.

Of the MSS of Saṃvarodaya, our first impression is that they are apparently unreliable. They are full of metrical, grammatical and syntactic aberrancies, some of which are supposed to be reflecting a version which is older than the oldest of the extant MSS. Therefore, our edition may be considered as an effort to restore, what Snellgrove says, 'an originally imperfect text'; and in this case 'we are deprived of the chief measure of success, namely the correctness of the restored version'.

If this is true, as long as we are reluctant to be content with what Snellgrove says 'the next best thing', we would have no choice but to go to and fro between what J. Brough calls 'over-correction' and 'the other extreme' i.e. preserving all the aberrant forms of the oldest of the extant MSS and consequently multiplying the enumeration of irregularities of the kind that are found in Edgerton's Grammar.

To avoid this, we have to try to adopt a madhyamā pratipad (J. Brough ibid. p.375). But, how is this possible? By closer examination of the various forms and styles of the Buddhist Sanskrit writings and a detailed grammatical analysis of each type as Brough says?

Here, we arrive at the necessity of adopting a quite artificial standard by which acceptance or rejection of an irregular form is to be decided.

This may be justified by the same argument of Snellgrove as mentioned above. If it is supposed that the text of Saṃvarodaya is 'originally imperfect', it naturally follows that our success does not have to be measured by how closely our edition adheres to the original, much less by 'the correctness'. And the text edited

according to this standard will necessarily possess a tinge of artificiality, though the aim is to be as close to the original as possible.

Now, we would like to examine our own method of editing a text. At first, we collect by a collation¹ of MSS as many possibilities of both sense and form of a sentence or a passage as are possible within the limits allowed by MSS. Then, examining each of those possibilities in as many contexts as we can think of, we try to find the most probable one by the process of elimination.² At this stage the Tibetan material is actually of great help.

The final aim of this whole process is to restore the original text. Here, we confront the abovementioned problem of adoption or rejection of each irregular form, and we arrive at the necessity of introducing an artificial standard by which we decide this.³

1

To collate MSS, it is a matter of course that we have to be ready to take into account many irregularities. These irregularities may seem to be caused by carelessness when we consider each manuscript separately; nevertheless we may find some general tendency, even if it may be vague, in the irregularities of a form by studying all the available MSS collectively. It is no wonder that MSS are 'rife with errors'.

2

It is by no means unusual for all the words of a sentence to have various readings in the MSS. The possible permutations and combinations of these readings allow many different interpretations of the text. And nothing is to be gained by simply enumerating all the possibilities. Recourse to the Tibetan translation, however, will enable us to show at least one of these possible interpretations. The first step is to reconstruct from the Tibetan version one such combination which accords with, in Snellgrove's term, 'the required sense' or 'the intended sense' of the sentence. The next step is to explore the other possible combinations by comparing to the first possible interpretation the alternative readings suggested by the MSS. In this way, the most acceptable possibility can be found through the process of elimination. The text thus established may indeed agree with the sense of the Tibetan version, not because the Tibetan version is in principle always reliable, but because it simply happens to present the most acceptable possibility in this case.

3

We should take note of the fact that the final aim of our effort is to restore the original text, but it does not mean that the 'success' of our present edition has to be measured by the extent to which the text is restored. 'Success' should be measured by the degree to which this procedure works effectively and coherently in each case.

This artificial standard should result from the hypothetically presupposed intuition of the author of the Saṃvarodaya. This 'working hypothesis' is based upon our attitude not to consider all irregularities separately from the morphological point of view, but to study the way in which they occur and to try to find some regularity in it.⁴

In any case, the author may well have used some, if not all, of these irregularities intentionally. It might, perhaps, be rash for us to regard them as 'barbarities' or as evidence of 'carelessness' as Snellgrove does.

The attitude of the author as presupposed by us is as follows. The author intended to write the Saṃvarodaya-tantra in grammatically correct Sanskrit. But, when he felt difficulty in establishing a correct metre, he gave priority to the metre, especially to the fifth, sixth and seventh syllables of each pāda of śloka, and consequently introduced various kinds of grammatical distortion.⁵

Since we presuppose the attitude of the author in this way, the procedure in adopting or rejecting an irregular form should necessarily be as follows. Among various readings, we should adopt one that is grammatically correct or that can be corrected within the limits allowed by the MSS. If an irregular form seems to

4

For example, one of the conspicuous grammatical features of the MSS of the Saṃvarodaya is the omission of the case endings -h and -m. This phenomenon is also noted in the Hevajra; and it has been considered carefully by Professor N. Tsuji in his review of Snellgrove's edition of the Hevajra (Tōyōgakukō, vol.42, No.4, 1960, p.59 f.). But, our concern is rather different from Tsuji's; it lies not in showing the linguistical meaning of this phenomenon, but in discovering whether there is some regularity in its way of occurring; for instance, we must find whether it occurs in certain syllables of a verse or not.

5

The range of this distortion must have been within the limits between which the text was understandable for the people of his time. But it is in principle difficult to know this range; Edgerton's Grammar or Tsuji's abovementioned review may be regarded as an attempt to determine it.

possess sufficient support in the manuscripts and if its existence can be explained by metrical reasons, it should be preserved.

This procedure, by being too simple and too vague and containing some uncertainty, may produce inevitable inconsistencies in its application. In fact it sometimes contradicts the evidence of MSS which reflect an older stage of the text.

For example, in the case of vidhiyutān (18-20), which is supported by MSS AL, vidhiryutān (MSS BCIDEP) should be adopted if we were to apply this procedure mechanically.

In the case of tena tustena tal labhyañ (33-27), which is supported by MSS BEL, it cannot be denied that the original reading was tal labhyate (MSS ACIP and D). However, because labhyañ is grammatically understandable, we preferred it. It is also to be preferred from the point of view of the metrics. See Pañcakrama IV. 45.

The opposite case is mandalākṛti tathā (31-3); all MSS except A, take it as an even-numbered pāda, and read -ākṛtis. This can quite reasonably be adopted by applying our procedure. But in this case, the reading of A, which is grammatically correct, was adopted because it is possible to consider this pāda as an odd-numbered pāda (na-vipulā), and because -ākṛtis is grammatically not understandable.

When an irregularity occurs in syllables other than the fifth, sixth and seventh of a pāda of śloka, the situation is more uncertain. For example, in the case of dāridraduḥkha naśyati (33-31), dāridrañ duḥkha naśyati which is attested by MSS CP is metrically preferable, but tib. confirms the reading of AIDL and B. If we should, giving preference to metre and accepting as a result syntactic distortion, adopt the reading of MSS CP, it might be counted as an example of 'compounds divided into separated words' (next section 8). 3.).

The opposite case is cakradvaya samālikhet (10-37), which is supported by MSS BEP, and is metrically correct. Here, it is difficult to deny that the original reading is cakradvayaṁ (MSS ACIDL).

It is sometimes very difficult to decide whether or not an irregular form is to be preserved. In such difficult cases we must first of all try to discover if there is any reason for the occurrence of such an irregular form, in particular, any reason connected with the thinking of the author in as much as it can be presupposed. This investigation brings us to the following stage, that is, the consideration of the internal necessity for the author to adopt a certain irregular form.

For example, we can easily find the reason for the occurrence of sādhyo 'pi (28-15) which possesses the meaning of sādhyaṁ api. Here the author could have made the metre more regular more easily by emending the phrase, for example, into sādhyañ ca or sādhyaṁ tu. But, why did he use api and accept the irregularity of using the ending -ah with the meaning of an acc. sg. m.? If api is necessary, the sense required should be: '(the practiser) should draw the figure of sādhya ...; also covering the sādhya (himself)'; but this is not probable from the context. Thus, we fail to explain the necessity for the irregular form sādhyo 'pi.⁶

Once we take the difficulty of yāsu ānayed manasepsitam (28-16) to have been caused by metrical reasons, we acquire two possible ways of paraphrasing it: (1) yam ānayed manasepsitam; (2) yāsu ānayed manasepsitāsu. After examining the context of this passage, we can decide that (1) is the better. In the case of (2), the intended sense would be '(thus) he leads (the sādhya) to whatsoever (state)

6

If one prefers to consider it as a case of -ah, acc. sg. m. (see Tsuji, *ibid*, p.67 2. a.) or regard it as a syntactic irregularity, granting that it has a meaning, one can only do so after failing in this way, otherwise one will be apt to forego the possibility of discovering the meaning of the author.

he wishes'; but in this case, we would have to explain why the author used the feminine form yāsu when yeṣu is also possible. Of course it is impossible for us to explain the use of the form yāsu when we take the clause for the meaning of (1), but there is in fact no need for any such explanation, as the meaning of the whole sentence has already been explained by manasepsitam, nor do we have to make further emendations, for example, yañ ca instead of yāsu, since the required sense is already clear enough.⁷

We began our attempt to edit the Sanskrit text of the Saṃvarodaya with the realization that it is, what Snellgrove says, an attempt 'to restore an originally imperfect text'; and this necessarily made us employ an artificial standard on the adoption or rejection of irregular forms. Therefore, our edition merely reflects our present understanding of the text.

The consistent principle in this edition should be sought in its introduction of 'the working hypothesis', and 'success' should be measured by judging how effectively and consistently this 'hypothesis' works, but not by ascertaining whether 'the original' has been restored or not.

7

This gap between the required sense and the Sanskrit form restored from MSS is inevitable. We make use of it as the starting point of our investigation into the meaning of the text. It is this gap that forces us to present the Tibetan version and English translation together with the Sanskrit text.

III. Grammatical Notes

The following notes list the grammatically irregular forms which have been adopted in our edition of the Samvarodaya-tantra as a result of the procedure mentioned in the previous section. They have been classified in the conventional way so as to show how widely they occur throughout the grammatical system. Short explanations with the usual abbreviations are attached to each example in order to show the context.

EG = Edgerton: Buddhist Hybrid Sanskrit Grammar, New Haven 1953.

1) Phonology, vowels.

1. Long vowels for short.

-samāvarṇā (26-4) for -samavarṇā; sāhasram (23-46) for sahasram, in this case, a long 3rd syllable is required in the even-numbered pāda, since there is a long 4th syllable.

2. Short vowels for long.

peśito (2-18) for peśīto; sukhotsahah (21-13) for sukhotsāhah; sukhotsahe (26-16) for sukhotsāhe; ābhirīsthāne (21-16) for ābhirīsthāne.

2) Sandhi

1. Double sandhi.

a. Double sandhi with loss of -h.

vajrasūryeti (13-37) for vajrasūrya iti; tasyāvabhāsatah (13-4) for tasyā avabhāsatah; jānuno 'bhyantare (23-24) for jānunor abhyantare; manotsāhaṁ (8-32); but note adhordhvan (19-32) which occurs in a prose passage.

b. Double sandhi with loss of -m.

kalpāgnīva (10-38) for kalpāgnim iva; hūmkāroccārayed (17-20) for hūmkāram uccārayed; vakrānyatra (26-1) for vakram anyatra.

c. madhyadeśopapadyate (2-9) for madhyadeśa upapadyate.

2. Hiatus.

About forty cases of hiatus which occur between the first and second, third and fourth pādas of a śloka are to be noted; hiatus appears sometimes even in prose, for example, 28-20, 26; 31-14, 15, 34; 33-9.

In the following six examples, hiatus serves to bring about a short 5th syllable in even-numbered pādas: sitapuspena arcayet (10-4); pañca āvaset (21-2); ca adūṣitaḥ (8-7); iti uktavān (18-24); dharma-utsavaḥ (18-6); buddha-rddhayaḥ (21-25).

In the following two examples, hiatus gives rise to a short 5th syllable in odd-numbered pādas (metre: pathyā): yogiyogini ācāryaḥ (8-4); ca ahaṁkāri (8-15).

Other examples are: peśi amitanāthasya (2-21); ghano amogha-siddhayeḥ (2-21) contra met.; praveśya āsane (8-14) contra met.; satyavādī ahiṁsā (18-3); parātma ātmarūpena (21-29); sahajā iti (9-12), in this case, sahajeti is contra met. cf. all MSS exc. A. sahajā-m-iti; grāme ekarātriḥ (21-12), grāma ekarātriḥ is unmetr.; śmaśāne ekalinge (21-14), śmaśāna ekalinge is contra met.; ekākī ekamānsasaḥ (21-13); mātaṅgī-ābhirāsthāne (21-16); yathā-oṣṭhapramānataḥ (23-8); bhoti acintayā (33-10); devatā-āsanaḥ (23-16); nānā-āsavabhedañ (26-50); bhage aṅguli (31-6); sūkṣmā adhyātmikā (31-5).

3. -m- as sandhi-consonant.

This phenomenon should be considered with caution. In the following sahajā iti (9-12); nāma uccārya (28-19) (prose) and yānti uddamśā (28-25), the fact that all MSS except A have -m- possibly suggests that -m- is not original but is inserted by later scribes, cf. devatātmaka ācāryaḥ (17-8), all MSS suggest devatātmaka-m-ācāryaḥ.

The following examples can either be regarded as compounds which are divided into separate words because of metrical reasons, or as instances of 'the accusative with nouns and adjectives treated as

verbal in force (EG 7.16)': pūrvakuśāla-m-apekṣitam (2-9) for pūrvakuśālāpekṣitam; -vr̥nda-m-āśritam (33-34); unmattavrata-m-āśritah (21-14) cf. yad icched vratam āśritah (21-24). In the phrase karma-m-anuṣṭhāyēt (8-20), one could read karmam (acc. sg. n.); and vidveṣakarma-m-ākhyātam (28-9) could be interpreted as karmam (nom. sg. n.) ākhyātam (EG 17.10). But, as -m- actually has the effect of making the 5th syllables short in these cases, it is not easy to deny the possibility that the sandhi-consonant -m- is used here as a handy means to regulate metre. For jalpanam japam ākhyātam (21-14), jalpanam japa-m-ākhyātam is also possible; for amrtam argham uttamam (26-15), amrtam argha-m-uttamam (= arghottamam) is possible too, 'amṛta is the best of (all kings of) arghas'.

In the following examples, this phenomenon is more clearly attested: sarvacintā-m-acintayā (33-10); nānāropa-m-anāropam (33-12); ānandaphala-m-āśā (33-16). In the case of sarva-m-advayatām (4-32), sarvam can be taken as adv. ('attains advayatā perfectly'); but the Tibetan version suggests a sandhi-consonant. If sādhya-m-ākṛṣṭih (10-23) is considered as an even-numbered pāda of a śloka, the use of -m- brings about a short 5th syllable (pathyā); it is also possible to take sādhya as acc. sg. m. and the object of the verbal noun ākṛṣṭih.

But, it would seem unnecessarily complicated to apply the idea of a sandhi-consonant -m- in a case like grhadevatam eva ca (9-18) and sindum eva ca (9-19).

For svayambhūjñānam ādharam, tib. rañ byuñ ye śes kyi ni rten suggests svayambhūjñāna-m-ādharam, but this is less probable from the context.

For madirotsavasānandaṃ (8-33), a reading madirotsava-m-ānandaṃ (= madirotsavānandaṃ) is very likely, as s and m are graphically very similar.

bhava (4-5) acc. sg. m.; ratmasambhava (5-54) nom. sg. m.;
ucchuṣma (8-38) acc. sg. m.; upaśmaśana (9-19) nom. sg. n.;
ghorāttahāsa (9-26) acc. sg. m.; anāmikārakta (10-15) acc. sg. n.;
merupākṛānta (10-30) acc. sg. m.; vidhi (10-35) acc. sg. m. but,
vidhi-niścitam is also possible in this case; preta (13-30) nom.
 sg. m.; bhūmi (17-7) acc. sg. f.; sīmāprakāra (17-12) acc. sg. m.;
deśagokula (23-4) acc. sg. n.; gandhanaivedya (23-23) nom. sg. n.;
stutisaṁtoṣa (23-41) acc. sg. m.; 'mrta (26-12) nom. sg. n.;
codaka (26-41) acc. sg. n.; -duḥkha (33-31) acc. sg. n..

- b. The following are examples of short 5th syllables in odd-numbered pādas (metre: pathyā)

paramānanda (2-16) nom. sg. n.; viśayaviśuddhi (4-22) nom. sg. f.;
samaya (8-24) acc. sg. m.; utsrṣṭabali (8-38) acc. sg. m.;
caturmukhamantra (10-26) acc. sg. m.; ghorāndhakāra (17-37) nom.
 sg. m., n.; deha (18-5) nom. sg. m.; ācāryābhiṣeka (18-28) acc.
 sg. m.; mṛtyu (19-8) nom. sg. m.; hūmkāra (19-32) acc. sg. m.;
vāra (21-9) acc. sg. m.; śūlamudgara (26-7) nom. sg. n. or for
śūlamudgarau nom. dual m.; aṅguli (31-6) acc. sg. f..

- c. Attention is paid rather well to the fact that a short 4th syllable is needed when the 3rd of an even-numbered pāda is short. In the following cases, the omission of -h or -m makes the 4th syllable short:

nāḍīcakra (7-1) acc. sg. m.; candana (8-18) nom. sg. m., n.;
himalaya (9-17) nom. sg. m.; saptakṣara (10-18) nom. sg. m., n.;
laṅkāraṅkita (10-28) acc. sg. n.; cakradvaya (10-37) acc. sg. n.
 cf. ACIDL cakradvayaṁ; lakṣmīvana (17-37) nom. sg. n.; sadyāsava
 (26-35) nom. sg. m..

- d. In the case of kārunyanirbhara (8-32'), -ṁ is omitted (metre: vasāntatilakā). In kāmika svargasya (19-35) and nirantara kṣane kṣane (5-22), the omission of -h and -ṁ does not make the metre regular.

2. In order to make the metre regular, various kinds of anomalies occur in the case-forms.

a. -a stem.

-a nom. pl. m. (EG 8.79): -akṣobhya (4-14); antarābhava (2-4) must be regarded as plurals, they cannot be nom. sg. m.; in both the examples, the use of -a result in a short 5th syllable in an even-numbered pāda. -a in kharamānuṣa (2-3) causes a short 4th syllable, which is required by the short 3rd syllable in an even-numbered pāda. -a loc. sg. m., n. (EG 8.11): ghṛtamadhumadhya (10-11); silpikāgrha (21-16); amaśarāva (10-16) (pathyā); in these cases, a short 5th syllable results. -ya dat. sg. m.: devatārādhyā (8-19) for devatārādhyāya. But, in the following examples, -aya is metrically not required: amukākarsaya (10-23); devadattastambhaya (10-32), cf. EG 8.44.

b. -ā stem.

-a nom. sg. f.: tathatāmaya (7-24); dvibhuja (13-29); here the use of -a (for -ā) causes the 5th syllable to be short in an even-numbered pāda. -a nom. voc. pl. f. is used for -āh in -bhagna (8-23) (metre: mālinī).

c. -i stem, -ī stem.

bhairavakālarātrin (13-17) for -tri acc. sg. n.; sattva-
vatāramuktin (33-35) for -kti bahuv. nom. sg. n.; here the anomalous final -n makes the 7th syllable of the odd-numbered pāda long (metre: pathyā). See EG 10. 24. It must be noted that dvandvas appear generally as neuter singular in this text. -in nom. pl. m. (EG 10.165): devatālokapālādīn (4-8) for -dayah. -ayeh gen. sg. m.: amogasiddhayeh (2-21) for -ddheh. Another example of distortion due to metrical reasons is bhāvato (8-23) for bhavatyō nom. voc. pl. f. (metre: mālinī).

d. Consonant stems.

Root consonant stems: svaparārthasampado (6-1) for -sampad nom. sg. m. (EG 15.1); numeral unapañcāśa (10-24) for unapañcāśat; but, śukrapratipade (31-34) for -pratipady loc. sg. f. is not metrically required.

-as stem. -asāh nom. sg. m.: śubhacetāsāh (8-37) for -cetāh; -hitacetāsāh (18-3) for -hitacetāh; these two examples result in giving short 7th syllable to even-numbered pāda.

-an stem: parvañ (21-9) is used for parva acc. sg. n.; this gives a long 2nd syllable which is required by the short 3rd in the even-numbered pāda; similarly ksīrasāgaranāmañ (26-9) is used for -nāma acc. sg. n. or -nāmānañ bahuv. acc. sg. m.; but in the phrase karma-m-anuṣṭhayet (8-20), karmam (acc. sg. n.) anuṣṭhayet is also possible (EG 17.10); karma (= karme) (10-55) loc. sg. n. (EG 17.15).

-in stem: gunino (8-7) for gunī nom. sg. m. (metre: bha-vipulā).

-at stem: in the case of acintayena buddhena (33-11), acintayena (EG 18.61) is used for acintayata pres. part. to give a short 5th syllable to a pathya.

-mat stem: dhīmatah for dhīman nom. sg. m..

-ac stem: tiryacas (19-37) for tiryāñcas nom. pl. m.; this gives a short 5th syllable to a pathya.

- e. Other irregular forms: paraprāṇi ca nirdayah (18-7) for paraprāṇini nirdayah (metrically identical); akṣamālayā (21-18) for akṣamālā nom. sg. f.; sādhyo 'pi (28-15) for sādhyaṃ api; sūkṣmapadmeṣu (31-25) for sūkṣmapadmañ; vajradhārinam (31-23) for vajradhārinī (metrically identical); but, saiva śuddhi (for śuddhā) bhavet (17-7) is still contra met. even as bha-vipulā; in case of mahasukhaprapradā sarve (31-30), sarve is considered to be loc. sg. with nominal ending -e, and is used in the meaning of sarveṣu.

6) Verb.

Aberrant forms are few in the verbal system; only the following have been noted.

causative: saṁcāret (8-23) for saṁcārayet; adhitiṣṭhayet (8-24) for adhiṣṭhāpayet; sambhavet (2-12) for sambhāvayet; vindhayet (28-18) is perhaps for vidhyet 3. sg. opt.; another possible form vyādhayet 3 sg. caus. opt. seems to have been avoided as it is metrically correct.

adhyeṣatu (17-2) e. sg. impv. see EG p.205, Dictionary; adhyeṣya (8-11) ger.(?) must be interpreted as 3 sg. opt. or 3 sg. impv. cf. adhyeṣyo (17-8) fut. pass. part..

kuru (10-50) for kurutām 3 dual impv. or kuryātām 3 dual opt..

niyatām (19-22) 3 sg. impv. is perh. for niyeta 3 sg. pass. opt.; MS L niyate is metrically possible.

uktavān (18-24) past act. part. is used for pres. ind. P vakti or opt. P vacyāt.

Gerund -ya for -tvā: pūjya (23-44), but no MSS; pūjā (MSS AIDEL) must perhaps be preserved; sevyā (26-40); grhya (28-26) prose!; dhārya (17-21) (unmetr.) for dhṛtvā (metrically better)?; but it is impossible to interpret dhārya as a fut. pass. part. dhāryaṁ modifying khasūtram; cf. MS A dhāryatu for impv. dhāratu or dhārayatu?

7) Concord.

1. Number.

a. Lack of agreement between noun and adjective.

etā nādikāḥ ... śarīreśubhakāriṇī (7-23); tribhir divasena (26-39); sarpakañcukasamīśraṁ kākolūkagrāhāni (28-9); dvayor pārśve (31-22).

b. Third singular forms for plural number.

catvāri ... upatiṣṭhate (4-3); ye sattvā ... vartate (4-4); bahuvighnās tu jāyate (26-24); devasuramanuṣyaṇām (for devasuramanuṣyā c.m.) ... jāyate (4-8); in these cases, the personal ending -te is used instead of -nte in order to make the previous syllable, the 7th of the even-numbered pada, short.

c. Third plural forms for singular number.

śukraṃ ... patanti (19-17); yo 'bhirohanti (19-21), cf. yo 'bhirohati (19-22), all MSS exc. A -nti, still contra met.;
viṣṇānavayurudhasya (for vayurudhaviṣṇānaṃ c.m.?) ... gacchante (19-34). yogī ... vicaranti (5-51); bhayaṇakākārah kathayanti;
 in those two cases, -nti is used to give a long 3rd syllable which is required by the short 2nd to the even-numbered pāda.
karālī ca sravanti (13-23); here, -nti is used to give a long 2nd syllable which is required by the short 3rd in the even-numbered pāda; sravanti pres. part. nom. sg. f. is not attested by MSS, though it is metrically possible.

2. Person.

udānayaṃasa (2-1) 3 sg. periphrastic perfect for udānayaṃasitha 2 sg.; 'haṃ maṇḍalaṃ likhet (17-13); vivarjayet (18-18) 3 sg. caus. opt. for vivarjayāmi 1 sg.; sevayet (18-18) 3 sg. caus. opt. for sevayāmi 1 sg. opt..

3. Gender.

hrīhkarāṃ vīryahantā ca (26-22) for vīryahantr; param āhutam (28-3) for param.

4. Case.

yāsu ānayed manasepsitam (28-16) for yam ānayed manasepsitam or less likely yāsu ānayed manasepsitāsu.

5. Other miscellaneous examples.

catvari bhūta sarvagāḥ (4-7) for catvari bhūtāni sarvagāni or caturbhūtāni sarvagāni; śikṣāsamayuktāṃ (for -yuktānaṃ) śiṣyānaṃ (18-20); śatruṇāṃ baladarpitāḥ (for -darpitanāṃ) (28-7).

8) Compounds.

1. Anomalies in the prior member.

a. Long vowels for short: āgatāsarvavīraṇāṃ (8-39) for āgata-; vikṛtāraudracittena (23-18) for vikṛta-; triphalākumkumānābhi (26-44) for triphala-kumkuma-nābhi; in these three examples, a

long 3rd syllable in a pathyā is needed because of the short 2nd; ksayovrddhi (5-14) for ksaya-, possibly B ksaya-; -saṅghābhagna (8-28) for -saṅgha-bhagnāḥ (metre: mālinī).

- b. Short vowels for long: kāñcanaprabhasannibhaḥ (5-54) for -prabhā-; yogiyoginimelāyaḥ (26-29) for -yoginī-; dhātakipuṣpaḥ (26-38) for dhātakī-, cf. BCIP dhātakī-; cf. dhyanadhāraṇavinirmuktaḥ (33-6) (all MSS!) for -dhāraṇa-, but not metrically needed.
- c. -vidhiryutān (MSS BCIDEP) is metrically preferable to -vidhiyutān (18-20) (MSS AL); -sadyakarakah (5-40) is preferable to -sadyahkarakah.
- d. traya- for tri-: trayanādīśvarūpaś (4-26); cf. catvāra- for catur-: catvarānandarūpiṇī (31-22), but not metrically needed.

2. Anomalous order of members of a compound.

rāgadveṣādimohāndhā (2-8) for rāgadveṣamohādyandhā; pītamandala-
candrasṭhaḥ (10-12) for pītacandramandalasṭhaḥ; vajrāṁkitatrisūcikaḥ
(13-10) for trisūcikavajrāṁkitam; viññānavāyurūḍhasyā (19-34) for
vāyurūḍhaviññānasya; narakaurave (26-25) for rauravanarake.

3. Compounds divided into separate words.

māraṇaḥ vidhi (10-35) for māraṇa-vidhi; in this case, a long 3rd syllable is needed because of the short 2nd; but māraṇaḥ vidhi-nīścitam is not impossible; a contrasting example is śarāvasaṁputikṛtam (10-28), here a long 3rd syllable is required on account of the long 4th, but the reading śarāvaḥ saṁputikṛtam is not attested by the MSS; mandalaḥ bhūmibhāgasya (17-7) for mandalabhūmibhāgasya; khacitaḥ vajraratnais tu (17-35) for khacitavajraratnais tu; gardabhaḥ vānararūḍho (19-32) for gardabhavānararūḍho; in those three cases, a long 3rd syllable is needed because of the short 2nd in a pathyā; marakān rogaśāntikā (23-4) for marakarogaśāntikā, a long 3rd syllable is required by the short 2nd and long 4th; anādinidhanaḥ rūpaḥ (33-7) probably stands for anādinidhanarūpaḥ; cf. devyā herukajñānan (3-7) for devīherukajñānan, but metrically identical; prthivīmātraḥ kāthinyaḥ

(4-7) is, as ma-vipulā, metrically not correct; prthivīmātrakāthinyam (MSS CIEPL) is metrically right, but not original; its meaning should be understood as prthivikāthinyamātram.

4. Miscellaneous examples: rasajihvāvisuddhitvam vijñānam (4-19) should be understood as rasajihvāvijñānam visuddham or rasajihvā-vijñānavisuddhitvam.

5. Of khatvāṅgasakamaṇḍalu (26-7), -sa- has been inserted between the members of a compound simply to give an extra syllable; khatvāṅgaṁ sakamaṇḍalu is not attested by MSS.

9) Irregular use of the cases.

It is often difficult to draw a clear distinction between morphological and syntactic confusion (EG 7.2); some of such instances have already been discussed. In the following examples, it is difficult for us to guess why the author introduced such an irregular form. Such anomalous forms might simply have been chosen at random as could be expected in view of 'the presupposed attitude of the author'.

For 2-13, the Tibetan version suggests the following sentence which is easier to understand: antarābhavasattvaś ca deśāntaragāmivat / kathamcit karmasūtrenā sadgatyā ca prajāyate; pindamātran tu ratnasya (2-22) is considered to be intended for pindamātraratanasya, and is more likely than the alternative pindamātrasya ratnasya, because the latter is metrically right; devāsuramanuṣyaṇām (4-8) for nom. pl. m.; dākinī saha (or dākinīsahā) (17-8) for dākinīyā saha (metrically identical) paraprāṇi ca nirdayaḥ (18-7) for paraprāṇini nirdayaḥ (metrically identical); dadyād ... -vidhiyutān (for -vidhiyutebhyah) (18-20); prsthasya (for acc.) pūrayet (18-33), cf. homaṁ ca pūrayet (18-35); viññānavāyurūḍhasya ... gacchante (19-34) for vāyurūḍhaviññānam ... gacchate; madena vihvalā kaścid (26-24) is more likely for madena vihvalatā kasyacid than the alternative madena vihvalas kaścid, because the latter is metrically right; yāsu (for yam) ānayed manasepsitam (28-16).

10) Word-formations.

1. The suffix -ka is easily and frequently used only in order to make the metre regular, ex. pītavarnakam (13-10); in one case, -tas is used in the same way: trivimokṣatas (4-23) for trivimokṣaḥ; but in the following instance the addition of -na makes the meaning different from the one required: prabhāvanaiḥ (18-16) for prabhāvaiḥ; cf. anutpādarasāvedād (3-14) for anutpādarasavedanād tib.; pratijñāta- (21-5) for pratijñā-.

2. For niścetata (4-6), tib. suggests niścetastā; jarāyus (2-2) stands for jarāyujās (BD); saṃsveda (2-2) for saṃsvedaḥ (BD); madhvajā (26-31) in lieu of madhuja (MSS BIDPL); guṇavartih (7-10) is used in the meaning of guṇavartinī.

IV. The Saṃvarodaya-tantra in its relation
to the Saṃvara literature.

1) The Saṃvarodaya-tantra and the Laghusaṃvara-tantra.

The Saṃvarodaya-tantra has not completely been ignored by modern scholars. G. Tucci considers the Saṃvarodaya, together with its commentary (Ratnarakṣita's Pañjika), as one of the most important examples of tantras dealing with iconometry.¹ S.B. Dasgupta quotes several important passages from the Saṃvarodaya, which he calls Heruka-tantra, in his An Introduction to Tantric Buddhism, Calcutta, 1950.² However, this tantra has not received much attention in spite of the unique information it offers. It is because the whole Buddhist tantric system itself has not been studied enough; but this tantra especially has been unduly ignored because it was thought to be a commentarial tantra (bśad rgyud) of the Saṃvara³ (bDe mchog) or the Cakrasaṃvara-tantra.⁴ The word bśad rgyud tends to give the impression that it is not a work of first-rate importance.

In the bsTan hgyur, there are many commentaries on the Saṃvara or Cakrasaṃvara; they are actually commentaries on the Laghusaṃvara-tantra (No.16). Comparing the contents of the Saṃvarodaya and the Laghusaṃvara, we can easily notice that the Saṃvarodaya is not a mere commentary of the Laghusaṃvara. If so, what is the Laghusaṃvara?

1

G. Tucci: Tibetan Painted Scrolls, p.293.

2

Dasgupta quotes from the MS belonging to the Asiatic society of Bengal, No.11279, which is identical with our MS I. He says that he has not tampered with the reading of manuscripts except when the mistake or the corruption has been palpable, but the readings in many quotations do not always agree with those of our MS I.

3

G.N. Roerich: The Blue Annals, Part I, p.388, fn.1; Ryūjō Yamada: Bongo-Butten-no-shobunken, Kyoto, 1959, p.170, fn.8.

4

The reason why commentators call it the Cakrasaṃvara is still not clear. rGyal ba bzañ po (Jayabhadra) in his commentary on the Cakrasaṃvara (No. 2122) says that Cakrasaṃvara is the preacher of the tantra, by whom Heruka and Vajravārāhī are advocated (Vol.49, 21-1-6). In ch.39 of the Dakṛnava the word Cakrasaṃvara refers to a deity (Vol.2, 181-5-8).

What does the word 'commentarial tantra' (bśad rgyud) mean? To answer these questions, we must first consult Bu ston's system of the Saṃvara literature, because the Cakrasaṃvara is said to be 'the original tantra' (rtsa rgyud, mūla-tantra)⁵ of it, and compare it with bTsoñ kha pa's system.

Bu ston's classification of the tantras in his rGyud sde spyiḥi rnam par bshag rgyud sde rin po cheḥi mdses rgyan (Complete Works, BA, edit. by Lokesh Chandra) has already been summarized and discussed by Tucci.⁶ We do not have to repeat these discussions here; but as what Tucci remarks about the Saṃvara literature is slightly different from what Bu ston says, we would like to study the part dealing with the Saṃvara literature.

Bu ston divides all tantras into four big classes: I. bya rgyud; II. spyod rgyud; III. rnal hbyor rgyud; and IV. bla na med. bla na med is divided into three; thabs rgyud, ye śes rgyud, and gñis su med rgyud. ye śes rgyud is divided into seven groups: A. rigs drug mñam par ston paḥi rgyud; B. Tantras connected with Heruka; C. with rNam snañ; D. with rDo rje ñi ma; E. with Padma gar dbañ; F. with rTa mchog; G. with rDo rje hchañ. The second of these seven divisions, tantras connected with Heruka, has five subdivisions: a. bDe mchog; b. Kye rdo rje; c. Saṅs rgyas thod pa; d. sGyu hphrul chen mo; e. A ra li. The Saṃvarodaya and the Laghusaṃvara belong to this bDe mchog, the Saṃvara literature.

2) The original tantra of the Saṃvara literature.

Now, the discussion is to be divided into two parts: (1) the problem of the original tantra (rtsa rgyud, mūla-tantra) and (2) the problem of the commentarial tantras (bśad rgyud).

5

G. Tucci: Heruka-ni-tsuite, Shyūkyō-kenkyū, New Vol.14, No. 2, 1937, p.142.

6

G. Tucci: Tibetan Painted Scrolls, p.261, n.276.

As to the original tantra, Tucci mentions the dPal bde mchog hbyuñ ba (Tohoku 373), which is nothing but the Samvarodaya; but this is not the case. Bu ston does not mention it. Bu ston first quotes Vajra's commentary on the Samvara-mūla-tantra,⁷ which says as follows:

The original tantra has 100,000 chapters; the uttara-tantra is the mKhah dañ mñam pa (Khasama-tantra) of 100,000 ślokas; and the uttarottara-tantra of fifty-one chapters has 1,700 ślokas.⁸

This uttarottara-tantra must be identical with the Laghusaṃvara. On the other hand, Lva ba pa says that the original tantra has 300,000 ślokas.⁹

Bu ston makes these two opinions meet by relying on the commentary on the Herukābhyudaya (No. 2138), which says that the longer Abhidhāna of 300,000 (ślokas) and the shorter Abhidhāna of 100,000 (ślokas) are said to be identical, in its explanation of a passage of the Herukābhyudaya. This passage states that (the

7

dPal bde mchog gi rtša rgyud kyi rgya chen bsad pa tshig don rab tu gsal ba shes bya ba. No. 2128, Vol.49.

8

This quotation is worded as follows in the text of Vajra's commentary: cihi phyir phyi mahi phyi ma yin she na / lehu hbum pa ni rtša bahi rgyud yin la / slo ka hbum pa nam mkhah dañ mñam pahi phyi ma yañ lehu lha bcu rtša gcig pa ni phyi mahi phyi ma yin pas so, // Vajra: *ibid.* Vol.49, 163-2-6 f. cf. Vol. 49, 162-5-1.

Reasoning of this kind is rather common, for example, Snellgrove: Hevajra, Part I, p.16 f.; Herukābhyudaya: dpal khrag hthuiñ mñon par hbyuñ ba las hbum phrag gsum las btus pa // bstan bcos thams cad kyi rgyal po dpal khrag hthuiñ chen po klags pas hgrub pa // thams cad mkhyen pahi ye ses gshan las rgyal ba dañ pohi grub pahi rgyud phyi ma // 'Extracted from the Sriherukābhyudaya of 300,000 (ślokas), the king of all the scriptures (titled) Srimahāheruka (which is) accomplished by being merely recited, the Sarvajñajñāna-parajñā-ādisiddha-uttarāntantra.' Vol.2, 234-3-4 f.. The reconstruction parajñā from gshan las rgyal ba is only suppositional; it needs to be examined again.

9

de la slob dpon Lva ba pahi hgrel par rtša bahi rgyud hbum phrag gsum par bsad la / hgrel pa gshan rnams kyi rtša bahi rgyud hbum par bshad pa. Bu ston: *ibid.* BA, 39-3 f.

shorter tantra) of 100,000 (ślokas) is said to have been extracted from (the tantra of) 300,000 (ślokas), and this shorter work in fact is (the tantra) which has summarized the essence of the larger work.¹⁰

He further relies on the Dakārnava which says that that which has

been extracted from the Abhidhāna of 300,000 (ślokas) is the

Laghusaṃvara.¹¹ Bu ston thinks that the original tantra (which must be,

10

he ru ka mñon hbyuñ las / hbum phrag hbum phrag gsum las bśad // rgyud kyi sniñ po bsdus pa yin // shes pañi hgrel par rgyas pa mñon par brjod pa hbum phrag gsum pa dañ / bsdus pa mñon par brjod pa hbum phrag gcig par bśad / 'Explaining the remark in the Herukabhyudaya that (the Abhidhāna of) 100,000 (ślokas) has been extracted from (the Abhidhāna of) 300,000 (ślokas) and summarizes the essence of (this) tantra (of 300,000 ślokas), the commentary says that the longer Abhidhāna of 300,000 (ślokas) and the summarized Abhidhāna of 100,000 (ślokas) are identical'. Bu ston; ibid. 391-5 f. But, Herukabhyudaya: hdi dañ hdra bañi gsañ sñags ni // hjig rten gsum na med pa ste // hbum dañ hbum phrag gsum du gsuñs // rgyud kyi sniñ po mthah dag bsdus // 'A secret mantra similar to this one does not exist in the three worlds; this is said in (the tantra of) 100,000 (ślokas) and (the tantra of) 300,000 (ślokas). (This mantra) has summarized all the essences of the tantra.' Ch.9, Vol.2, 224-1-6. The wording is slightly different from that in Bu ston's quotation, but, of course, does not contradict Bu ston. The commentary, that is, Zla ba gshon nu's dPal he ru ka mñon par hbyuñ ba rnal hbyor mañi rgyud kyi rgyal po chen poñi dkah hgrel yi ge nuñ fu (No. 2138) has: hbum phrag ni mñon par brjod pañi hbum paho // rgyas par mñon par brjod pa hbum phrag gsum yod do // hbum phrag tu mi dmigs pañi skad cig gi phyir ro // hbum phrag gsum ni bskyed dañ / skyes pa dañ / yohs su rdsogs paho // '(the tantra of) 100,000 (ślokas)' means the Abhidhāna of 100,000 (ślokas). As the longer (tantra), the Abhidhāna of 300,000 (ślokas) exists, because of the moment of non-perception in (the tantra of) 100,000 (ślokas). (The tantra of) 300,000 (ślokas) is origination, that which has originated and perfection.' Vol. 51, 120-5-8 f.. The latter half of this passage is as yet not comprehensible.

11

The passage in question, which can be found in prakāra 4 (Vol.2, 193-2-2 f.), is quoted by Tsoñ kha pa in explaining the meaning of the number of the chapters of the Laghusaṃvara: rgyud hdi la ña gcig tu byas pa ni / mkhah hgro rgya mtsho las / de ltar ñes brjod hbum gsum las // phyuñ ba bde mchog nuñ fu ste // a yig la sogs kṣa yig mthar // lehu rñams ji ltahi rim pa yis // de kho na nid ldan par sbyar // shes lehu rñams rtsa rgyud las ji ltar hbyuñ bañi rim pa yis / a nas kṣa yig gi bar la sbyar la / de yañ de kho na nid ldan par sbyar shes gsuñs so // ho na dbyaṅs gsal gyi yi ge lña bcu yod la / lehu ña gcig yod pas ma mthun no sñam na / skyon med de yi ge so soñi de nid sbyar ba lña bcu / ña gcig pa ni spyiñi de nid dañ sbyar bar bya ba yin pañi phyir ro // 'With regard to the fact that (the number of the chapters) has been made to be fifty-one in this tantra, the Dakārnava says as follows: Likewise, from the Abhidhāna of 300,000 (ślokas) is extracted the Laghusaṃvara, the chapters of which are, in order from the character a to the character kṣa, connected with (each of) those which are equipped with the truths. This is to be explained as follows: each chapter (of the Laghusaṃvara) is connected with (each of) the characters from a to kṣa

what Vajra calls, the uttara-tantra) i.e. the Abhidhāna of 100,000 (ślokas), from which the present Laghusaṃvara has been extracted, has itself been extracted from (the Abhidhāna of) 300,000 (ślokas).

So far Bu ston has distinguished between the mūla-tantra and the Laghusaṃvara; but discussing the fact that the Laghusaṃvara does not have the introductory formula evaṃ mayā śrutam etc.,¹² he changes the meaning of the word mūla-tantra rather surreptitiously from the legendary tantra of 100,000 chapters or the so-called Khasama-tanta or the Abhidhāna-tanta to the extant Laghusaṃvara-tantra; he concludes his discussion of the mūla-tantra by summarizing the contents of each chapter of the Laghusaṃvara without mentioning its title Laghusaṃvara-tantra.¹³

bTsoñ kha pa's reasoning in his commentary on the Cakrasaṃvara¹⁴ (No. 6157) is generally similar to Bu ston's as far as the quotations are concerned. He quotes the same passages from Vajra's commentary, the Dākāṇava, the Herukābhyudaya and its commentary as Bu ston does; but subsequently, he quotes from the Yoginīsaṃcārya (No. 26) the

11 contd

according to the order in which it has been extracted from the mūla-tantra, and is also connected with (each of) "those which are equipped with the truths". Then, it might be considered that (the total number of) vowels and consonants i.e. fifty characters and (the number of) the chapters i.e. fifty-one do not accord; but there is no fault about it. The truths to be connected with each character are fifty; the fifty-first (chapter) is to be connected with the truth common (to all the characters)'. bTsoñ kha pa, *ibid.* Vol.157, 7-4-1 f.. Here, de kho na ñid ldan pa is still not clear; in the quotation, it may be equivalent to the character each of which is connected with a certain truth, but in the explanation, it seems to be equivalent to the truth (de kho na ñid).

12

For example, Lva ba pa says that it exists in the mūla-tantra but not in the Laghusaṃvara because this is the uttara-tantra. Arguments of this kind can also be found in Bhavyakīrti's commentary (No. 2121) Vo.49, 3-3-1 f.. See bTsoñ kha pa: *ibid.* 11-1-1 F..

13

Bu ston, *ibid.* 392-5 f..

14

dPal hkhör lo sdom par brjod pa bde mchog bsdus paḥi rgyud kyi rgya cher bsad pa "sBas paḥi don kun gsal ba" shes bya ba, Vol. 157.

following passage:

From the tantra preached in 100,000 (ślokas) the bDe mchog (the Saṃvara-tantra) has been extracted. In the Khasama-tantra of 100,000 (ślokas), the same explanation is given.¹⁵

He explains this as follows:

That which has been mentioned (here in the Yoginīsaṃcārya) as the Khasama-tantra of 100,000 (ślokas) corresponds to [what Vajra mentioned as the uttara-tantra i.e. the Khasama-tantra of 100,000 (ślokas)] previously. (Here,) it is said that the Laghusaṃvara-tantra has been extracted from the Abhidhāna of 100,000 (ślokas). The Abhidhāna of 100,000 (ślokas) from which the Laghu-tantra has been extracted and the Khasama-tantra are two (different tantras); (but, here they have been) confused.¹⁶

According to the same quotations from the Herukābhyudaya and its commentary as those given by Bu ston, Tsoñ kha pa concludes that there are two different mūla-tantras.

He quotes a passage from the mūla-tantra which, in this case, is nothing but the Laghusaṃvara:

15

hbum du brjod paḥi rgyud las ni // bde mchog btus par gyur pa dañ //
nam mkhaḥ dañ ni mñam paḥi rgyud // hbum gcig na yañ hdi dag bśad //
Vol. 157, 3-3-8 f.. The only passage corresponding to this quotation is the following: miñ gi rgyud ni hbum sde las // sñiñ po bśdus par gyur pa yin // nam mkhaḥ dañ ni mñam paḥi rgyud // hbum phrag gcig nas de bshin bśad // '(This is the tantra of) the essence extracted from 'the tantra of name' (Abhidhāna-tantra ?) of 100,000 parts. The same explanation is given in the Khasama-tantra of 100,000 (ślokas)' Yoginīsaṃcārya, ch.13, Vol. 2, 240-4-6.

16

nam mkhaḥ dañ mñam paḥi rgyud hbum phrag gcig tu bśad pa ni sñā ma dañ mthun la / hbum phrag gcig paḥi mñon brjod las bde mchog nuñ nuḥi rgyud btus par bśad de / nuñ nuḥi rgyud gañ las btus paḥi mñon brjod hbum pa dañ / nam mkhaḥ dañ mñam paḥi rgyud gñis so snor gsuñs so //
Tsoñ kha pa, ibid. 3-4-1 f.. The last passage of this quotation can literally be translated as follows: It has been said in an inverted way that both the Abhidhāna of 100,000 (ślokas) and the Khasama-tantra have been extracted from the Laghu-tantra; but, this translation is not adoptable from the context. bTsoñ kha pa: op.cit. 3-4-1 f..

The hero has preached the summary tantra (extracted) from
rig pa rgya mtsho.¹⁷

He says that some Tibetan scholars take this rig pa rgya mtsho as
the mūla-tantra of 100,000 ślokas.¹⁸

After discussing these various kinds of mūla-tantras, he says
that only the Laghusaṃvara of fifty-one chapters is extant and that
summarized tantras (bsdus rgyud) are in themselves not the mūla-
tantras; nevertheless the Laghusaṃvara of fifty-one chapters (which
is itself a bsdus rgyud) should (provisionally) be regarded as the
mūla-tantra.¹⁹

Consequently, according to Bu ston and bTsoṅ kha pa there are
three different mūla-tantras: 1) the legendary mūla-tantra of
100,000 chapters; 2) the mūla-tantra called Abhidhāna which is said
to have 300,000 verses (the longer Abhidhāna) or 100,000 verses (the
shorter Abhidhāna or the Khasama-tantra of 100,000 verses); and 3)
the extant mūla-tantra, that is, the Laghusaṃvara-tantra of
fifty-one chapters.

17

rtsa rgyud las rig pa rgya mtsho las ji bshin // dpah bos mdor
bsdus pa yin. bTsoṅ kha pa: op.cit. 3-4-4.

18

This passage can be found in chapter 34 of the Laghusaṃvara. rig
paḥi rgya mtsho las de bshin // mdor bsdus nas ni gsuṅs pa yin //
Vol. 2, 36-1-4. Admitting that rig paḥi rgya mtsho may be taken as
a name of the Saṃvara, it is not required from the context that it
should be considered as the mūla-tantra of 100,000 ślokas.

rig paḥi rgya mtsho occurs also in ch.67 of Abhidhanottara:
sbyor ba rgyud kyi rjes hbraṅ ba // bgrod daṅ bgrod min rnal hbyor ma //
rig paḥi rgya mtsho mchog yin te // rdo rje mkhaḥ hgro nuṅ zad cig //
sgyu hphrul sdom paḥi rgyud yin no // rnal hbyor ma ni hbyuṅ baḥi
rgyud // gsaṅ baḥi rgya mtsho rgyud yin te // hes brjod rgyud ni bla
med pa // hdus pa mchog ni bsad pa yin // (Vol. 2, 92-1-5 f.). In this
context rig paḥi rgya mtsho does not necessarily have to be taken as
the larger mūla-tantra. This passage, of which the meaning is not
clear, should be noted because it contains names of tantras yet to be
identified.

19

bsad rgyud maṅ po yaṅ raṅ raṅ gi rgyud rgyas pa las bsdus paḥi bsdus
rgyud yin pas / bsdus rgyud gaṅ yin rtsa rgyud min yaṅ ṅa gcig pa lta
bu ni rtsa rgyud do // bTsoṅ kha pa: op.cit. 3-4-6 f..

To conclude this discussion of the mūla-tantra of the bDe mchog i.e. the Saṃvara literature, we would like to examine which concept of the mūla-tantra can be found in the Laghusaṃvara itself and in other texts.

The Laghusaṃvara always mentions the title of Śrīherukābhidhāna at the end of each chapter; and in the last chapter, it defines itself as follows:

Completed is the miraculous and wonderful kalpa (adbhutaścārya-kalpa) extracted from the Śrīherukābhidhāna of one hundred thousand (ślokas), the king of all the teaching ever preached, Śrīherukamahāvīra, accomplished by being merely recited, not surpassed by any other (tantras), complete from the beginning and the supreme.²⁰

The Abhidhānottara, which actually calls itself the Abhidhānottarottara, frequently refers to the Abhidhāna-tantra especially in its third, eleventh and sixty-seventh chapter.²¹ It also refers to the bDe mchog:

de ñid bsdus las gañ gsuñs dañ // de bshin bde mchog las gañ
gsuñs // gsañ bahi rgyud las yañ dag bsad // de bshin dpal

20

dpal he ru kahi ñes par brjod pa hbum pahi nañ nas phyuñ ba grub
pahi rtog pa rmad du byuñ ba ño mtshar dañ bcas par byed pa bstan
chos thams cad kyi rgyal po dpal he ru ka dpah po chen po klags pas
grub pa gshan thams cad kyis mi thub pa gdod nas grub pa bla ma yin //
Vol. 2, 40-4-7 f.. This rtog pa rmad du byuñ ba can be taken as another name for the Śrīherukābhidhāna, just as the Sahajodaya-kalpa is another name for the Saṃvarodaya; and Śrīherukamahāvīra might be another name as Sarvayoginirahasya is another name for the Saṃvarodaya. The expression klags pas grub pa (paṭhitasiddha) occurs in the colophons of the Saṃvarodaya and the Herukābhyudaya.

21

The numbering of chapters in the Sanskrit manuscripts is different from that of the Tibetan translation. Here we use the numbering of the latter.

mchog dañ po dañ // rdo rje hjigs byed ñid las gsuñs // bzlas
dañ brtul shugs sogs pa hgrub // '(It, purity śauca or
 attainment of purity, is nothing but) that which has mentioned
 in the Tattvasaṃgraha, that which has mentioned also in the
Saṃvara; it has been rightly mentioned in the Guhya-tantra
 No. 88?), and likewise in the Śrīparamādyā and the Vajrabhairava.
 It accomplishes recitation, pious observance and so on.'²²

and

rig rgyal hkhor lo sgyur bañi sñags // hdi ni ma byuñ hbyuñ mi
hgyur // de ñid bsdus dañ dpal mchog dañ // bde mchog rdo rje
hjigs byed du // khro bo bshi dañ yañ dag ldañ // sku brgyad
dañ ni bcas par ru // 'This king of vidyā (magical spell), the
mantra which turns the wheel (of the right teaching) has not
 appeared (before) and will not appear (in the future) either;
 (this is) mentioned in the Tattvasaṃgraha, the Śrīparamādyā, the
Saṃvara and the Vajrabhairava. This is fully provided with the
 four angers and is completely possessed of the eight figures.'²³

Passages completely identical to these two are found in chapter 27
 (Vol.2, 34-1-7) and chapter 30 (Vol.2, 35-1-7) of the Laghusaṃvara
 respectively.

22

Chapter 46, Vol.2, 78-1-4. However, Skt. MSS belonging to the
 University of Tokyo: No. 173, ch.43, 146b-5 f. and No.474, ch.45,
 172b-5 f. give the following reading:

tattvasaṃgrāhe yad uktaṃ ca tathoktaṃ cakrasaṃvare //
guhyatantre samākhyātaṃ haritāntre tathaiva ca //
mahābhairave caiva japaprabhādisiddhidam //

Chapter 46 of the Abhidhānottara and ch. 27 of the Laghusaṃvara contain
 a long common passage, in which this quotation is included.

23

Chapter 60, Vol.2, 87-4-5. However, Skt. MSS belonging to the
 University of Tokyo: No. 173, ch.57, 186a-1 f. and No. 474, ch.59,
 219b-5 f. give the following reading:

vidyādhara cakravartī ayaṃ mantrō na bhūto na bhaviṣyati //
tattvasaṃgrāhe ca mūlamantre saṃvare vā tathaiva ca //
catuḥkhrodhasamayuktam aṣṭamurtisamanvitam //

Chapter 30 of the Laghusaṃvara is identical with the first half of
 ch.60 of the Abhidhānottara. Differences in the details between these
 two are to be studied carefully.

In the Herukābhyudaya, the hkhlor lo sdom (Cakrasaṃvara) is mentioned in the same way:

de kho na ñid bsdus pa dañ // dpal mchog dañ po hkhlor lo sdom //
rdo rje hñigs byed la sogs par // man ñag ñe bar hgro ba ni //
lus kyi dbus na yod pa ste // rdo rje khrag hthun ye ses ni //
sgrub pos gañ gis mi ses pa // gañ shig brtul shugs yun riñs yañ //
de las dños grub med par hgyur // hdi ru las mchog ses par bya //

'The teaching which occurs in the Tattvasaṃgraha, the Śrīparamādyā, the Cakrasaṃvara, the Vajrabhairava and so on is (as follows):

The wisdom of Vajraheruka exists in the centre of the body. The deed of a practiser who does not know it, even if he (makes an endeavour) through pious observances for a long time, will not reach the perfection; in this (vajraherukajñāna) the supreme deed is to be known (to exist).'²⁴

sDom pa (Saṃvara) occurs in chapter 2 of Dākāṇava.²⁵ But, the following two passages in chapter 49 and prakāra 4 respectively give different information:

mkhañ hgro dañ ni sdom rgyud dañ // ñes par brjod pa phyi ma
dañ // kun spyod hbyuñ bañi rgyud rnams su // dños po las ni
rab tu bstan // de yis rgyud ni chen po hdi // thub pa skyes bu
mchog gis gsuñs // 'In the tantras such as the Dāka, the
Abhidhānottara, the (Yoginī-) saṃcārya and the Udaya (= the
Saṃvarodaya?), the substance and the action (of the great energy
mahāvīrya) have been taught; through this (great energy) this
mahātāntra has been preached by the Silent One, the highest being.'²⁶

²⁴

Vol. 2, 229-2-5.

²⁵

mkhañ hgro sdom pa mñon brjod dañ // gshan yañ rnal hbyor mañi rgyud
dañ // rnal hbyor rgyud rnams su gsuñs pañi // las kyi tshogs kyi dños
grub ster // 'This grants the perfection of the multitude of actions
mentioned in the Dāka, the Saṃvara, the Abhidhāna and other yoginī-
tantras and yoga-tantras.' Vol. 2, 153-2-4 f., also prakāra 1, 188-4-7.

Chapter 49, Vol. 2, 187-5-6 f..

and

hdus pa bde mchog bla ma dañ // bde mchog rdo rje mkhah hgro dañ //
hbyuñ ba de ñid hdus pa dañ // rdo rje hjigs byed sañ pu ti //

'the (Guhya-) samāja, the Saṃvara-uttara (= the Abhidhānottara?),
 the Saṃvara, the Vajradāka, the Udaya (= the Saṃvarodaya?), the
Tattvasaṃgraha, the Vajrabhairava, the Saṃputi,²⁷

Saṃvara, Saṃvara-tantra or Cakrasaṃvara is here mentioned together
 with such tantras as the Tattvasaṃgraha or the Śrīparamādya or the
Vajrabhairava which names seem to refer to extant tantras; therefore,
 it will be difficult to consider the Saṃvara as the longer mūla-tantra
 which is not extant. Especially, in the last two examples, the Saṃvara
 is mentioned together with the Vajradāka, the Abhidhānottara, the Udaya
 (= Saṃvarodaya), (the Yoginī-) saṃcārya and the Saṃputi; this Saṃvara
 must be the extant Laghusaṃvara.

The Khasama-tantra is referred to in chapter 9 of the Yoginīsaṃcārya
 (Vol. 2, 239-1-1) and chapter 41 of the Herukābhyudaya (Vol. 2, 233-1-6).

In its last chapter (33-30), the Saṃvarodaya refers to the
Śrīherukābhidhāna-tantra. It defines itself in the final remark of the
 last chapter as the Sahajodaya-kalpa extracted from the
Śrīherukābhidhāna-mahātantrarāja of 300,000 ślokas. bTsoñ kha pa points
 out the importance of this information;²⁸ it will be discussed by us
 again later.

Thus, the existence of the larger mūla-tantra of the Saṃvara
 literature has been suggested by various tantras; but at the same time,

bsad rgyud du mdsad pa ltar byaho // bTsoñ kha pa: op.cit. Vol.157,
 3-5-8.

none of them give direct quotations²⁹ from it. It will be our future task to reconstruct the concept of this mūla-tantra by means of a philological treatment of the extant materials.

3) Commentarial tantras of the Saṃvara literature.

Bu ston classifies commentarial tantras of the Saṃvara literature into three: 1. Special (thun moñ ma yin pañi rgyud); 2. Common (thun moñ gi bśad rgyud);³⁰ and 3. Commentarial tantras about which there is discussion whether they are true tantras or not (rgyud yañ dag yin min rtsod pa can).

As thun moñ ma yin pañi bśad rgyud, he enumerates the following tantras:

- a. Nes par brjod pañi bla mañi bla ma (No. 17)
- b. dPal rdo rje mkhañ hgro shes bya bañi rgyud (No. 18)
- c. mKhañ hgro rgya mtsho rnal hbyor mañi rgyud kyi chen po (No. 19)
- d. dPal he ru ka mñon par hbyuñ ba rnal hbyor mañi rgyud kyi rgyal po chen po (No. 21)
- e. rNal hbyor mañi kun tu spyod pañi rgyud (No. 23)
- f. bDe mchog sdom pa hbyuñ bañi rgyud (No. 20)
- g. rNal hbyor ma bshiñi kha sbyor gyi rgyud (No. 24)
- h. hPhags mo mñon par byañ chub pa (No. 22?)³¹

29

Only one direct quotation from the Śrīherukābhidhāna has been found so far. It is to be found in Ratnarakṣita's Pañjika: dpal he ru ka mñon par brjod par // thun moñ rgyud rnams thams cad kyi // gtan tshigs rnams kyis gshom bya min // dad pa tsam gyis gzun bya ste // mig dañ lag par ma yin no // shes so // (Vol. 51, 75-4-2 f.). This passage cannot actually be found in Laghusaṃvara which is also called Śrīherukābhidhāna; but it occurs in ch. 46 of the Abhidhanottara (Vol. 2, 77-5-1). It is quite doubtful that Ratnarakṣita's "Śrīherukābhidhāna" means the larger mūla-tantra.

30

Tucci translates thun moñ ma yin pañi rgyud by 'Extraordinary' and thun moñ gi bśad rgyud by 'Ordinary'. op.cit. p.261, n. 276.

31

Tucci does not mention a. c. and h.. op.cit. p.261, n.276.

Bu ston mentions one more tantra, entitled hBum phrag gsum pa las phyuñ bañi sgyu hphrul dra ba chen mo ral pa gyen du brdses pañi rgyud sgyu ma chen mo, and says that the Mai tri mkhañ spyod kyi rgyud is attached to this (as an appendix); we cannot find these two tantras in the bsTan hgyur. bTsoñ kha pa also doubts their existence.³²

bTsoñ kha pa discusses things carefully in his commentary on the Cakrasaṃvara. He begins his discussion by interpreting a passage quoted from Durjayacandra:

mkhañ hgro hbyuñ ba kun spyod dañ // de bshin mtshan mchog bla mañi rgyud // kha sbyar rgyud dañ bshi po ni // bśad pañi rgyud du śes par bya // 'The Dāka, the Udaya, the Saṃcārya, also the Abhidhānottara-tantra with as fourth the Saṃputa are considered to be the commentarial tantras'.³³

He takes mkhañ hgro as the Vajradāka (No. 18); as to hbyuñ ba he gives three possibilities: the Herukābhyudaya (No. 21); the Vārāṇśīabhyudaya (No. 22); and the Samvarodaya (No. 20). There are different ideas about the number of bśad rgyud; some scholars, for example, Dārikapa adds the Caturyoginīsaṃputa (No. 24) and Dākārnava to these enumerated by Durjayacandra and obtains a total of seven bśad rgyud. Some Tibetan scholars add the Samvarodaya and the Vārāṇśīabhyudaya to these and obtain a total of nine tantras.

bTsoñ kha pa classifies the tantras into two classes according to Buddhaguhya's way of classification: commentarial tantras (bśad rgyud) and resembling tantras (cha mthun gyi rgyud).

32

sgyu ma chen mo shes bya ba hdi ni me tre mkhañ spyod rgyud chuñ hu gcig logs su bkol bar snañ shes gsuñs te / mañ du mkhyen shiñ sñiñ kha ma chuñ la blo gros che la shi ba pa rñams kyis legs par dpyad par byaho // bTsoñ kha pa: op.cit.4-2-3 f..

33

Rin po cheñi tshogs shes bya bañi dkañ hgral. No. 2120, Vol. 48, 256-3-1.

He includes the Yoginīsaṃcārya, the Saṃputa, the Vajradāka, the Abhidhānottara and the Saṃvarodaya in the bśad rgyud and the Herukābhyudaya, the Dakārṇava and the Caturyoginīsaṃputa in the cha mthun gi rgyud; the Vārāhī-abhyudaya is not regarded as a bśad rgyud and perhaps not as a cha mthun gyi rgyud either. His arguments about the Abhidhānottara and the Saṃvarodaya are noteworthy. He says:

The Abhidhāna, though, explaining it, some take it as a commentarial tantra and some regard it as a mūla-tantra, should be taken as a commentarial tantra.³⁴

Mentioning the fact that some Tibetan scholars explain the Saṃvarodaya to be a tantra summarized as a commentary (hgrel par bsdus rgyud) and at the same time to be both an uttara-tantra and a bśad rgyud, bTsoñ kha pa says:

Though the Saṃvarodaya contains the very important information according to which the Sahajodaya-kalpa has been extracted from the larger tantra of 300,000 (ślokas), it is to be regarded as a bśad rgyud according to the commentary.³⁵

bTsoñ kha pa's classification seems very relevant. The systems of the Herukābhyudaya and the Caturyoginīsaṃputa are obviously different from the system of Abhidhānottara, the Saṃvarodaya and the Yoginīsaṃcārya which are considered to reflect the same system with regard to the

34

mñon brjod la ni hgrel par res bśad rgyud dañ / res rtsa rgyud du byas kyañ bśad rgyud du byaño // bTsoñ kha pa: op.cit. 3-5-6 f..

Ratnaraksita's Pañjika on the Saṃvarodaya (No. 2137) suggests that the Saṃvarodaya and the Sahajodaya-kalpa are identical. Vol. 51, 119-1-4. This is to be discussed again later.

non-extant larger mūla-tantra.³⁶ The second Dalai lama dGe ḥdun rgya mtsho seems to have adopted Tsoñ kha pa's classification in his dPal hkhor lo sdom paḥi rim pa dañ poḥi lam la slob paḥi tshul go bde par rjod pa ḥdod pa ḥjo baḥi sñiñ po so far as we can judge from Tucci's remarks.³⁷

Bu ston includes the rGyud thams cad kyi gleñ gshi dpal yañ dag par sbyor ba shes bya baḥi rgyud (No. 26) and its uttara-tantra (No. 27, rGyud kyi rgyal po chen po dpal yañ dag par sbyor baḥi thig le shes bya ba) in the second of the three divisions of bśad rgyud.³⁸

36

In the case of the Saṃputa, we should take the following things into account. What Tsoñ kha pa meant by Saṃputa must be the Saṃputi nāma mahātantra (No. 26); Bu ston includes it in thun moñ gi bśad rgyud. Strangely enough, Tucci ignores this tantra and mentions only the dPal yañ dag sbyor baḥi thig le (No. 27) which is the uttara-tantra of the former. Bu ston does not mention the title of the latter; it is mentioned only as "rgyud phyi ma" (BA, 420-5). Bu ston says that it (No. 26) is a bśad rgyud common to many tantras; but that it is mainly (a bśad rgyud of) the bDe mchog for the following reasons: the main deity of the mandala of this tantra i.e. Vajrasattva is a form of bDe mchog; it is to be explained in the introductory remarks of bDe mchog (bde mchog gi gleñ gshi la bśad par bya baḥi phyir); it is said to be a bśad rgyud of bDe mchog in many commentaries (Bu ston: BA, 429-1 f.). The Saṃputi-tantra (No. 26) certainly makes the impression to be different from the Abhidhānottara or the Yoginīsaṃcārya. For example, it discusses thirty-seven bodhyaṅgas in prakāra 2 of its first kalpa (Vol. 2, 246-5-8 f.); and this is different from discussions found in ch. 9 and ch. 14 of the Abhidhānottara and ch. 3 of the Yoginīsaṃcārya. Its enumeration of places of pilgrimage in prakāra 1 of the fifth kalpa is also different from that in the Laghusaṃvara or the Abhidhānottara. The system of deities of the mandala is also different. We have the impression that the Saṃputi-tantra is similar to the Caturyoginīsaṃputa which is a cha mthun gyi rgyud in Tsoñ kha pa's classification. It would be too hasty to take this as evidence of inconsistency in Tsoñ kha pa's system of classification, because we have not yet fully studied these tantras. The relations between these tantras and the principles of classification which have been adopted by Bu ston and other scholars should be discussed after studying each of the tantras carefully. Nearly everything is yet to be done in this regard.

37

Tucci: Indo-Tibetica, III, Part II, p.29, f.n.1; Heruka ni tsuite, Shūkyō-kenkyū, New Vol. 14, No. 2, 1937.

38

In Vajra's commentary on the Saṃvara-mūlatantra the kha ḥbyor thig le is referred to as a bśad rgyud (Vol. 49, 163-5-8); it is yet to be decided whether it means this uttara-tantra of the Saṃputa or not.

As the third i.e. rgyud yañ dag yin min rtsod pa can, Bu ston enumerates thirty-two Ra li tantras which are thought to be commentarial tantras of the bDe mchog.³⁹ bTsoñ kha pa does not seem to have paid much attention to them.⁴⁰

4) The identity of the Saṃvarodaya-tantra.

We have already noted the special character of the Saṃvarodaya. bTsoñ kha pa has mentioned the point of view of Tibetan scholars according to which the Saṃvarodaya can be taken as a commentary, and at the same time as an uttara-tantra and also a bśad rgyud. We must examine this information in its context of the final remark of the last chapter of the Saṃvarodaya, which has been reconstructed as follows:

śrīherukābhīdhāne⁴¹ mahātantrarāja trilakṣoddhṛtasahajodaya-
kalpaśrīmahāsaṃvarodayatantrarājasarvayoginīrahasye
paṭhitasiddhe trayastriṃśattamah paṭalah samāptah.

This reconstructed text means that Sahajodaya-kalpa, Sarvayoginīrahasya and Saṃvarodaya are equivalent, and that the Saṃvarodaya has been extracted from the Śrīherukābhīdhāna of 300,000 ślokas. However, we have to take into account that the Sanskrit manuscripts allow other possible interpretations. Tibetan translation dpal he ru ka mñon par brjod pañi rgyud chen po hbum phrag gsum pa las lhan cig skyes pa hbyuñ bañi rtog pa las btus pa can mean that the Sahajodaya-kalpa has been

39

- De bshin gsegs pa thams cad kyi thugs kyi sniñ po don gyi rgyud which is yet to be identified. Bu ston enumerates four more tantras (Nos. 59, 60, 61 and 62), the characteristics of which are not clear (BA, 429-4 f.).

40

hdi rnams sñā nas kyañ rgyud rtsod pa can du grags śin / rgyud yañ dag min par ñes pa hgah shig snañ la / gshan rnams the tshom gyi gshir snañ ba dpyod par byaño //bTsoñ kha pa, op.cit. 4-1-8 f..

41

śrīherukābhīdhāna- is more probable; but only MS P attests it.

extracted from the Śrīherukābhīdhāna of 300,000 ślokas and that the Samvarodaya itself has been extracted from the Sahajodaya-kalpa. Another possible interpretation of the Tibetan translation is the following: the Śrīherukābhīdhāna of 300,000 ślokas and the Sahajodaya-kalpa are identical; and the Samvarodaya has been extracted from the Sahajodaya-kalpa.

The reading of MSS CIDEPL trilakṣoḍdhṛtasahajodayakalpe partly confirms the Tibetan translation; but this reading was not adopted in our edition. The place of btus pa does not agree with the place of uddhṛta in the Sanskrit text; we find here a rather intentional alteration by the Tibetan translator.

The idea which considers the Sahajodaya-kalpa as identical with the Samvarodaya is adopted by Bu ston. Concluding his recapitulation of the contents of each chapter of the Samvarodaya in his "rgyud sde rin po chehi mdses rgyan", he says:

(This is) the Sahajodaya-kalpa extracted from the Śrīherukābhīdhāna-mahātantrarāja of 300,000 (ślokas).⁴²

btsoñ kha pa's remark mentioned above can be understood in two ways:

- (1) The Samvarodaya contains the very important information according to which the Sahajodaya-kalpa (which is nothing but the Samvarodaya itself) has been extracted from the Śrīherukābhīdhāna of 300,000 ślokas, that is, the larger (mūla-) tantra (of the Samvara literature); (so, it should be considered as a mūla-tantra just as the Laghusamvara which is a mūla-tantra), (but,) according to the commentary, it should (provisionally) be taken as a commentarial tantra.

42

dpal he ru ka mñon par brjod pahi rgyud kyi rgyal po chen po hbum phrag gsum pa las phyuñ ba lhan cig skyes pa hbyuñ bahi rtog paho // Bu ston, op.cit. BA 423-2 f..

- (2) The Saṃvarodaya contains the very important information according to which the Sahajodaya-kalpa i.e. the Saṃvarodaya itself has been extracted from the Śrītherukābhidhāna of 300,000 ślokas, that is the larger mūla-tantra; therefore, according to the commentary, the Saṃvarodaya should be taken as a commentarial tantra.

As is said already, (1) is grammatically unnatural, but logically more correct. (2) is grammatically more natural, but logically wrong, because if the Saṃvarodaya is a bśad rgyud for the reason that it has been extracted from the larger mūla-tantra, the Laghusaṃvara which has also been extracted from the larger mūla-tantra should also be a bśad rgyud.

Thus, both interpretations lead to nearly the same conclusion as to the character of the Saṃvarodaya. In any case, the Saṃvarodaya can only provisionally be taken as a bśad rgyud; in its relation to the larger mūla-tantra, the Saṃvarodaya is logically not different in nature from the Laghusaṃvara. If the Laghusaṃvara is taken as a mūla-tantra, the Saṃvarodaya is also a mūla-tantra; and if the Saṃvarodaya is a bśad rgyud, the Laghusaṃvara too should necessarily be a bśad rgyud.

Now, we must examine the commentary (Ratnarakṣita's Pañjika) which, according to Tsoṅ kha pa's remark, one expects to take the Saṃvarodaya as a bśad rgyud. The passage in question is as follows:

hbum phrag gsum gyi bdag ñid can dpal he ru ka mñon par brjod
pañi rgyud las / de don mthah dag bsdus pañi khyad par gyis
hdir lhan cig skyes pañi dgah bar rab tu bstan pañi phyir /
phyi mañi rgyud dañ ñuñ ñuñi rgyud bśad pañi rgyud kyañ
ste / lhan cig skyes pa hbyuñ bañi rtog pa shes bya ba /
miñ gshan sdom pa hbyuñ bañi yañ dag par phyuñ ste / sñigs ma
lñahi dus su skyes pañi gdul bya rnams rjes su gzuñ bañi
phyir shes paho //⁴³

This passage can be interpreted in various ways; but the most natural way of understanding it is as follows:

From the Śrīherukābhidhāna-tantra of 300,000 (ślokas), because it excels in summarizing all the truths, in order to explain here sahajāṇanda (the innate joy), the Sahajodaya-kalpa, alias the Samvarodaya as an uttara-tantra, (and at the same time) a laghu-tantra and also a commentarial tantra, has been extracted. This is for the sake of benefiting the beings to be converted who are born in the age of five kinds of defilements.

This interpretation partly resembles the point of view of Tibetan scholars, which has already been mentioned by Tsoṅ kha pa, according to which the Samvarodaya is a tantra compiled as a commentary (hgrel par bsdus rgyud) and is at the same time an uttara-tantra and also a a bśad rgyud.

Other interpretations are also possible. phyi maḥi rgyud daṅ ṇuṅ ṇuḥi rgyud bśad rgyud kyaṅ ste might possibly be interpreted as follows:

In order to explain sahajāṇanda, there exist the uttara-tantra (= Abhidhānottara ?), the laghu-tantra (= Laghusaṃvara) and commentarial tantras; but (besides them,) the Samvarodaya was extracted from the Śrīherukābhidhāna-tantra of 300,000 ślokas (especially for this purpose).

or,

In order to explain sahajāṇanda, there exist the uttara-tantra (= the Abhidhānottara ?), the laghu-tantra (= the Laghusaṃvara) and also the commentarial tantra; and as this commentarial tantra the Samvarodaya was extracted.

In these discussions, we have come to note the unique character of the Samvarodaya. It should not be defined simply as a bśad rgyud, granted that the definition of the word bśad rgyud is still not clear enough. It can be taken even as a mūla-tantra in the same way as the Laghusaṃvara which is only provisionally regarded as the mūla-tantra of the Samvara literature.

However, it is clear that through these external investigations it is difficult to determine precisely the character of the Samvarodaya; we must be content with the bare fact that some mutual relation exists between the Laghusaṃvara, the Samvarodaya and the Abhidhānottara which, apart from the Yoginīsaṃcārya,⁴⁴ can also be taken as a mūla-tantra.

We must consider the internal investigation of these tantras as our future task. Only the accumulation of internal evidences will help us to clarify the meaning of the words mūla-tantra, bśad rgyud and uttara-tantra and their mutual relation.⁴⁵

44

This tantra is so closely related with the Abhidhānottara as to suggest a direct relation with it. For example, the complicated system of ch. 5 of the Yoginīsaṃcārya completely accords with that exposed in ch. 14 of the Abhidhānottara.

45

So far as we are able to determine, we have obtained the provisional impression that the Samvarodaya is closely connected with both the Laghusaṃvara and the Abhidhānottara. Each of these three seems to reflect directly, even if in different manner and in different parts of the text, a common system, in another word, the larger mūla-tantra, which is not extant. For example, in ch. 9 of the Samvarodaya, each of the places of pilgrimage is distributed according to the ten stages of Bodhisattvas: pīṭha---Pramuditā; upapīṭha---Vimalā; kṣetra---Prabhakarī; upakṣetra---Arciṣmatī; chandoha---Abhimukhī; upacchandoha---Sudurjaya; melapaka---Duraṅgama; upamelapaka---Acala; śmaśana---Sadhumatī; upasmaśana---Dharmamegha. Here, the sixth stage Abhimukhī is combined with chandoha; and after this comes the fifth stage Sudurjaya which is connected with upacchandoha. This disorder can also be found in ch. 50 of the Laghusaṃvara (Vol. 2, 40-2-4) and ch. 56 of the Abhidhānottara (Vol. 2, 84-4-8 f.). Therefore, this idea of distributing places of pilgrimage according to the ten stages of Bodhisattvas can be attributed to the larger mūla-tantra; and it is reflected in these three tantras.

V. The contents of the Saṃvarodaya-tantra.

As is said by Dasgupta, the main object of the tantra-literature must be "to indicate and explain the practical method for realizing the truth".¹

In the Saṃvarodaya-tantra, we find mentioned various practices, such as consecration (abhiṣeka) (ch. 18), the rites of writing and honouring the maṇḍala (chs. 8 and 17), the burnt-sacrifice (homa) (chs. 23 and 28), magical rites using yantra (ch. 19), the brewing of spirituous liquors (ch. 26), characteristics of the teacher (ācārya) and the disciple (ch. 18) and their religious practice (ch. 21) and so on. Those practices, though they may sometimes appear to be directed towards the fulfilment of worldly aims, are backed by a Weltanschauung entertained in common, if not consciously, by each practiser.²

There are other descriptions which seem, though not very clearly and systematically, to reflect more directly the doctrinal system of the Saṃvarodaya itself or of the Saṃvara literature.

The tantras are not concerned with any system of abstract philosophy; we are not necessarily interested in discussing what Dasgupta says "unsystematised philosophical fragments" found in the Saṃvarodaya. Still it is necessary for us to systematize the various themes of the Saṃvarodaya and to prepare for the future comparison with other tantras not only of the Saṃvara literature, but also of as many other systems as possible in order to reconstruct the doctrinal system of the Saṃvara literature and, eventually, the Weltanschauung of Tantric Buddhism.

1

S.B. Dasgupta, An Introduction to Tantric Buddhism, Calcutta, 1958, p.1.

2

For example, we find the reflection of this 'Weltanschauung' in the doctrinal justifications for the practices such as the rite of homa (see 23-59, 60) and the rite of brewing spirituous liquors (see 23-10, 11, 12).

Now, as our knowledge of other tantras is very limited, we have to be content with setting up, provisionally, a doctrinal framework which is applicable to other tantras. This framework will serve as a standard in systematizing the contents of these tantras in order to compare them with each other, and in studying the unsystematized contents of the Samvarodaya-tantra accordingly.

We base this doctrinal framework on the recognition that Tantric Buddhism is a typical system of religious mysticism.³ This framework consists of the following three points of view:

- 1) The ultimate reality.
- 2) The individual existence.
- 3) The relation between the ultimate reality and the individual existence.

This third point of view is nothing but utpatti-krama (the process of origination) and utpanna-krama (the process of perfection).⁴

We find that this very same system has already been mentioned in bTsoñ kha pa's commentary on the Cakrasaṃvara-tantra as being the system established by Nāropa; it consists of the following points⁵:

3

We have obtained many suggestions from H. Kishimoto's systematization of the Yoga-sūtra-system from the standpoint of religious mysticism in his Shūkyō-shimpī-shugi ("Religious mysticism"), Tokyo, 1958, which is a study of the Yoga-sūtra of Patañjali.

4

The fact that utpatti-krama and utpanna-krama are the most fundamental subjects of the Cakrasaṃvara-tantra has been rightly noticed by bTsoñ kha pa in his commentary on the Cakrasaṃvara-tantra. In Vol. 151, 4-4-7 f., he points out passages from many tantras which mention these two kramas; these passages, however, do not always give a clear explanation. Of these two kramas, various translations are possible. Snellgrove uses the words "process of emanation" and "process of realization" in his translation of the Hevajra, and A. Wayman translates them by "the Steps of Production" and "the Steps of Completion" in his mKhas grub rje's Fundamentals of the Buddhist Tantras, The Hague, Paris, 1966, p. 255 f.

5

de la rañ bshin shes pa grub pa po rin po che lta buñ gañ zag gi rañ bshin rgyud dañ gshi shes pa rim gnīs kyi bsnen sgrub

- (1) The cause (mentioned in) tantras is the body (pudgala) of a practiser.
- (2) The means (mentioned in) tantras is practice of utpattikrama and utpanna-krama.
- (3) The result (mentioned in) tantras is apraṭiṣṭhitanirvāṇa, Vajradhara and the body of yuganaddha.

1) The ultimate reality.

a. The various aspects of the ultimate reality.⁶

In translating the first line of verse 7 of chapter 3:

catvāro dhātavaḥ skandhāḥ ṣaḍviśayātmakāḥ tathā /

the context requires us to paraphrase as follows:

caturdhātvatmakam (pañca-) skandhātmakam ṣaḍviśayātmakam tathā.

This line is translated by us:

'It is of the nature of the four dhātus, (the five) skandhas and likewise the six viśayas'.

5 contd

yan lag bshi thabs rgyud dañ / mi gnas pañi mya ñan h̄das rdo rje
h̄chañ ñam zuñ h̄jug gi sku / gshan gyis h̄phrog par mi nus pa h̄bras
buñi rgyud du na ro pas bsad de / don gyi rgyud la gsum du phye bañ //
 (Vol. 157, 10-5-2 f.). The meaning of this passage is not yet clear; the following translation is only provisional: 'Here, "the essence" means the essence of the jewel-like pudgala of a practitioner; this is the tantra of cause. "The fundament" (gshi) is the practise of the two kramas in four parts; this is the tantra of means. And, the Nirvāṇa without fixation (apraṭiṣṭhitanirvāṇa), Vajradhara or the body of yuganaddha; this is the tantra of result from which one cannot be deprived by other people. Thus it is said by Nāropa. As to their meaning, tantras are divided in (these) three (groups).'

6

Kishimoto explains the ultimate reality as one of the essential characteristics of mystic thought: "The mystic thought presupposes some kind of substantial reality. This reality is not to be treated merely intellectually; it eventually coincides with the ultimate goal of the practice. This coincidence is regarded as the realization of the religious aim. Various expressions are given to this ultimate reality, emphasizing its transcendency and absoluteness which are the characteristics of the unthinkable mystic experience. This is expressed differently in each system as the absolute truth, the transcendent God, the universal self and so on. The manner of attaining it and realizing the ultimate union with it is also expressed in different ways such as "to become it", "to see it", "to know it" and so on". (Kishimoto, op. cit., p. 58). This is exactly applicable to the following discussion.

This "It", which is repeatedly mentioned in the following passages, is generally modified by neuter singular adjectives: it is thought to be nothing but the subject of this chapter, dealing with utpanna-krama: the ultimate reality which is to be realized through the process of completion (utpanna-krama) and which manifests itself through the process of origination (utpatti-krama).⁷

We must at first survey chapter 3 in order to discover the various aspects of the ultimate reality and their mutual relationship, and then, discuss these aspects concisely.

The metaphysical aspect of "it", the ultimate reality, is defined as jñāna. Jñāna in turn is defined as being caused through the inseparable union of Heruka, the theistic aspect of "it", with his female partner (devyā herukajñānam = devīherukajñānan). This jñāna is of the nature of the four dhātus, the five skandhas and six viśayas, that is, all the dharmas of the phenomenal world (3-7).

Its theistic side i.e. Nairātmya and Heruka corresponds to the metaphysical side, i.e. tathatā (śūnyatā) and upāya; the inseparable union or interpenetration of these two elements, which is nothing but jñāna, is itself the mandala, the figurative expression of the phenomenal world (3-9).

As its own essence is the joy innate in everybody, it is inherent (sahaja) in every dharma. Thus, we find both transcendent and immanent sides of the ultimate reality.

The relationship between the ultimate reality and the individual existence, that is, utpatti-krama and utpanna-krama has already been

7

The same procedure is to be found in chapter 33; passages of this chapter may mention saṃvara or tattva; both are expressed by neuter adjectives referring to a neuter principle.

mentioned. Utpatti-krama is the process of emanation of the phenomenal world from jñāna (or in its theistic side), Heruka; utpatti-krama is at the same time the process of evolution of all the phenomenal aspects, that is, the contents of the ultimate reality, and is shown visually by the mandala.

Various aspects of utpanna-krama, the process of realizing the ultimate religious goal through practice, are mentioned fragmentarily in this chapter; bTsoñ kha pa tries to relate these fragments to the system of the Pañcakrama (see note 1 to the translation of this chapter). We also find the essential elements of utpanna-krama. As is already discussed, the goal is nothing but the ultimate reality, that is, jñāna; it is the state of interpenetration (yuganaddha) of Nairātmyā and Heruka i.e. prajñā and upāya; it is the universal, great pleasure which is expected to be identical with the joy innate in everybody. This goal or the state in which this goal is realized may be mentioned especially by the words dākinījālasaṃvara (3-6) and saṃvara (3-17, 18, 19).

The medium⁸ in and through which this goal is to be realized is the human body, what bTsoñ kha pa says, the body (pudgala) of a practitioner; it is said as follows:

'Depending upon the mandala of body (kāya), the body (vigraha) of dharma and the body of enjoyment (saṃbhoga) exist; it completes the process of perfect enlightenment, therefore it is called the mandala of body (deha) (3-2).

This quotation suggests that the problem to be discussed in the item of "the individual existence" is the physical side of human existence.

8

See Dasgupta, op. cit. pp. 3, 146.

b. The ultimate reality as jñāna.

In chapter 53 of the Abhidhānottara, we find the following verse:

'The mandala is the highest truth; it is Śrīheruka, the highest jñāna. The mandala is the lotus of bhaga; it is the happiness (śubha) originated from the body of Varāhi.⁹

This is a typical example of the way in which the identity of Heruka with jñāna is expressed. But in the Saṃvarodaya, we do not find a clear example of this kind; the identity of Heruka with jñāna must have been an axiom. We must add the following two quotations from the Herukābhyudaya.

In chapter 41, Heruka is defined as being of the essence of sarvajñajñāna; it is said as follows:

'Śrīheruka is the supreme hero; he is the union of all the pleasures (priya). The attainment (of his status) will be realized by Soma-drink. It is the highest abode of eternity, dākinījālasaṃvara (which) has been extracted from the Khasama (-tantra). Sarvajñajñāna is his essence.'¹⁰

This quotation is also to be noted in connection with dākinījālasaṃvara. The expression "the highest abode" alludes to another aspect of the ultimate reality, that is, the goal of religious

9

dkyil hkhog mchog gi de ñid ni // he ru ka dpal ye śes mchog //
bha gahi pad mahi dkyil hkhog ni // phag mohi sku lus mchog gyur pa //
(Vol. 2, 82-5-2 f.)

The Skt. MSS belonging to the University of Tokyo give the following reading:

maṇḍalaṃ paramaṃ tattvaṃ śrīherukaṃ jñānam uttamaṃ /
maṇḍalaṃ bhagapadmaṃ tu varāhya dehaṃ śubhaṃ // (No. 173, ch. 50,
165b-5 f.; No. 474, ch. 52, 195a-1 f.).

10

dpal ldan khrag hthuiḥ dpaḥ bo mchog // mdsah ba thams cad ḥdus
pa yin // zla baḥi btuiḥ bas dños grub hgyur // rtag pa yi ni go

btus pa yin // kun mkhyen ye śes de raḥ bshin // (Vol. 2, 233-1-6 f.).
A passage similar to this is found in chapter 9 of the Yoginīsaṃcārya,
Vol. 2, 239-4-1 f.

practice or the summit of mystic experience. "The union of all the pleasure" is replaced by "the union of all the excellent people" in the corresponding passage of the Yoginīsaṃcārya; this foretells utpatti-krama.

In the following verse of chapter 37, the relation between Heruka, sarvajñajñāna and the world is clearly shown:

'Śrīheruka evolves himself as the phenomenal world; he is the supreme sarvajñajñāna. He is the essence of (all) living beings; he is all the buddhas; he is Vajrasattva, the supreme pleasure.'¹¹

This aspect of sarvajñajñāna, i.e. the origin of the evolution of the world, and the manner of the evolution are to be discussed in relation to utpatti-krama.

A well-known characteristic of this jñāna is the state or the union of prajñā and upāya or prajñā and karuṇā.¹² We find an example of it in the Saṃvarodaya itself; it is as follows:

prajñopāyātmakaṃ yogī herukatvaṃ vibhāvayet (21-11).

'The yogin should imagine himself to be in the state of Heruka (herukatva) which consists of prajñā (-wisdom) and upāya.'

This translation alludes to the relationship between Heruka and individual yogins, and the actual practice of utpanna-krama. But at the same time, it is quite possible to translate this more simply as follows:

11

dpal ldan khrag hthuñ hjig rten hgyur // thams cad mkhyen pahi ye ses mchog // sems can rañ bshin sañs rgyas kun // rdo rje sems dpah bde bahi mchog // (Vol. 2, 231-5-8 f.).

12

Dasgupta discusses this problem in great detail. op.cit. pp. 3 f., 9 f., 88 f.

'The yogin should imagine that herukatva consists of prajñā (-wisdom) and upāya.'

or

'The yogin should imagine herukatva to be of the essence of (the inseparable union of) prajñā and upāya.'

This herukatva reminds us of buddhatva, one of the commonest expressions of the metaphysical principle and at the same time the religious goal of Mahāyāna-Buddhism.

It is also well-known that prajñā and upāya refer to the female and male elements, and that the union of the two is expressed in sexual metaphors. The term mahāsukha expresses this union. It is said as follows:

'The pleasure (caused by the) ardent, undivided (union) of the two is nothing but the great pleasure (mahāsukha); distinction between prajñā-wisdom and karuṇā (compassion) is like (that between a lamp and (its) light (33-17). These two are of (one,) undivided essence; they appear in the form of one mind. It is caused by the union of prajñā-wisdom and upāya (means); and it realizes the complete enlightenment (33-18).'

When prajñā and upāya are in the state of union (samāyoga), they are one and the same spiritual existence (citta); this is the complete enlightenment (sambodhi), and is expressed as the highest abode of all the buddhas (33-19).

Lastly, we must note the examples of another aspect of the ultimate reality, that is, viññāna¹³ which is closely related with jñāna. It is said as follows:

13

Dasgupta frequently discusses "pure consciousness" as an aspect of the ultimate reality. op.cit. pp. 13, 24 f., 29, 78, 81, 85, 133 f.

'In the middle of it is consciousness (viññāna); it is ever-risen and all-pervading; it is the self-produced wisdom and is the receptacle (ādhāra); (this) consciousness is the supreme Lord (31-26).'

Then, we must discuss the last line of verse 11 and the first line of verse 12 of chapter 4:

tatra tiṣṭhet sadā devo viññānaṃ parameśvaraḥ //
tasyāvartate jñānaṃ ākāraḥ pañcādevataḥ /

Our translation, which is suggested by Pañj. and the reading of MS D (tasmā āvartate jñānaṃ), is as follows:

'(and earth is nothing but the place) where the deity always exists. Consciousness (viññāna) is the highest lord (11). Wisdom (jñāna) occurs depending on it; and the aspects of this wisdom are the five deities.'¹⁴

But, the corresponding Tibetan translation is as follows:

de la rtag tu gnas paḥi lha // rnam śes mchog gi dbaḥ phyug ste //
lha lha yi ni rnam pa ru // rnam śes de ni yoḥs su hgyur //

'the deity who always exists there (on earth) is the Lord of the supreme consciousness; this viññāna evolves of itself assuming the aspect of five deities.'

Though the second rnam śes for jñānaṃ is not confirmed by the Skt. MSS, the idea underlying the Tibetan translation is quite understandable.¹⁵

14

From this one can deduce a state of homogeneity between jñāna and viññāna based upon the theory of conversion (pravṛtti) of viññāna into jñāna. See Mahayanasutralāṅkāra, edited by Sylvain Lévi, IX. 65.

15

It is possible to paraphrase this second line into tasyāvartante jñānasya ākāraḥ pañcādevataḥ 'the (five) aspects of this jñāna evolve as five deities.' In this context, viññāna and jñāna are identical.

The verses which immediately follow this passage are of significance. They mention the correspondence which exists between the series of five skandhas such as rūpa, the series of the five wisdoms such as ādarśajñāna and the series of the five buddhas such as Vairocana; this correspondence is explained as the evolution from jñāna or as the manifestation of the contents of jñāna. In this same chapter, the manifestation of viññāna as the six indriyas (sense-organs), the six viṣayas (the objects of the senses) and the six viññānas (the perceptions by the senses) is mentioned (4-16, 17, 18, 19, 20). The second line of verse 20 reads:

ṣaṭpravṛtti vijñānam ālayan tu tathāgataḥ /

'Consciousness (viññāna) manifests itself in these six modes;

it is "the receptacle" (ālaya), the tathāgata.'

This adds the aspect of ālayaviññāna¹⁶ to the ultimate reality.

These examples show the theoretical side of utpatti-krama.

c. Dākinījālasaṃvara or saṃvara as an aspect of the ultimate reality.

In studying the Hevajra-tantra it is quite essential to elucidate the meaning of the word dākinījālasaṃvara, because the title of this work is Śrīhevajraḍḍakīnījālasaṃvara.¹⁷ In the Saṃvara literature, this word is quite common; its meaning must have been obvious to people in those days; but it is not easy to find an explanation of this word in the tantras themselves. We should at first discuss a typical passage from the beginning of the Laghusaṃvara-tantra, in which this word is used:

'Śrīherukasamāyoga fulfils all the wanted benefits. It is

superior to the superior, dākinījālasaṃvara. It resides always

¹⁶

Cf. Dasgupta, op.cit., pp. 19, 20.

¹⁷

Snellgrove gives brief explanations of the words dākinī and saṃvara. See The Hevajra Tantra, Part I, pp. 135, 138.

in the essence of everything, in the joy of the supreme secret.
The being who is composed of all the dākinīs is Vajrasattva,
the highest pleasure. This is the self-originating Lord, the
hero, dākinījālasaṃvara.¹⁸

As can be seen the word dākinījālasaṃvara occurs twice in this passage.
The meaning with which it is used at the end of the passage has brought
a two-fold explanation from bTsoñ kha pa:

'Dākinī means heroes and their female partners; jāla is their
assemblage. Ṣaṃvara means (the state in which) all of them are
bound together as the essence of the one and only Heruka. The
context is: by the Lord who is in this state the tantra is
explained.'¹⁹

and

'Dākinī is thirty-six veins and humours flowing in them.
jāla means assemblage. The wisdom appeared from the bodhi-mind
(bodhicitta) which is aroused by the wind circulating in it is
saṃvara; saṃvara means the supreme pleasure.'²⁰

In the first explanation, dākinījāla is nothing but saṃvara; saṃvara,
in Snellgrove's words, "the unity" of all the aspects of the world,
(which is itself Heruka) is expressed figuratively as the assemblage

18

dpal he ru ka yañ dag sbyor // hdod pañi don kun sgrub byed yin //

of all dākas and dākinīs. This idea of saṁvara reminds us of the idea of dharmakāya, sarvajñajñāna from which all the aspects of the world evolve, or in which all the aspects of the world are stored; here, utpatti-krama is meant.

According to the second explanation, jñāna, that is, the supreme pleasure in another aspect, is realized within the body of an individual. This idea makes it possible to mediate between the universal and the individual through the medium of the human body; it alludes to utpanna-krama.

Now, we must discuss how the word dākinījālasaṁvara is used in the Samvarodaya itself in order to obtain an understanding of its original meaning. In this text we find expressions such as dākinīvrnda (33-34) and sarvavīrasamāyogadākinījālasatsukha (3-6, 26-10) which are interchangeable with dākinījāla and sarvavīrasamāyogadākinījālasaṁvara (33-31) respectively. On the basis of these expressions and other more indirect evidences which can be found sporadically, we can form the following idea of the meaning of the word dākinījālasaṁvara.

The male and female followers of the tantric cult (yogins and yoginīs, or perhaps they imagine or call themselves dākas and dākinīs) make pilgrimage to certain countries which are thought to be places of pilgrimage such as pīṭha, kṣetra and so on.²¹ When they meet at such places, they recognize each other through secret signs (chomā).²² Their assembly (23-50) takes place in a secret, inauspicious place such as a graveyard with the superintendent

21

pīṭhakṣetre tu saṁkete yoginīyogimelakam (4-29). With regard to the correspondence of the names of countries and the places of pilgrimage, see 9-14 f.

22

The characteristics of these female practitioners (yoginīs) are explained in chapter 31. The secret signs are fully explained in chapter 9.

of the assembly (gaṇādhyaṅkṣa)²³ and his female partner as the central figures. This leader of the assembly (cakranātha) (8-29) and his female partner are thought to be identical with Heruka and his partner Vajravārāhī; this assembly is imagined to be no other than the mandala (8-29). Here, pleasure is realized through the sexual yogic practice practised by all the members of this assembly at the same time; it is a pleasure which is universal, and which can be experienced in common by all the members of the assembly, or in other words, the pleasures experienced by each member are fused into one super-individual pleasure. This pleasure is identified with the universal and supreme pleasure realized through the sexual union of Heruka and Vārāhī.

Thus, we arrive at the conclusion that dākinījālasaṃvara is a figurative expression for the inexpressible supreme pleasure which, just like the ānanda aspect of Brahman, is one of the aspects of the ultimate reality. People of that time must have had a clear mental picture of the scene; such an assembly must have had some actuality for them; and they understood the connotation of the word dākinījālasaṃvara visually; this is perhaps the reason that they did not need explanation.

Since we imagine this to be the original connotation of the word saṃvara²⁴, we must be able to explain particular instances of

²³

With regard to the relation or identity of gaṇādhyaṅkṣa and dātr (the donor), 8-36 is not sufficiently clear.

²⁴

We also find one instance in which saṃvara is replaced by sukha-vara (3-18). The word saṃvara cannot be explained etymologically as sukha-vara, much less as satsukha; we have to reject the traditional Tibetan explanation of saṃvara as śam (= sukha) + vara. See G. Tucci, "Heruka ni tsuite", Shukyo-kenkyū, New Vol. 14, No. 2, 1937, p. 140; Snellgrove, op. cit. Part I, p. 138.

its use for example in bTsoñ kha pa's first explanation mentioned before (p. 59); here saṃvara means the state of "union" of aspects of the world fused into one, or in which saṃvara is identified with the assembly (dākinījāla) itself.

bTsoñ kha pa explains in another place the meaning of saṃvara as follows:

sdom pa ni ḥdus pa mchog go // sdom rgyu ni sañs rgyas thams cad
kyi sku gsuñ thugs kyi gsañ ba gsum gyi las so // de ñid ni
sku gsuñ thugs kyi ḥkhor lo yañ yin no // sdom tshul ni sdom
rgyu de thams cad dbyer mi phyed par gcig tu sdom pa ste / bde
ston gcig tu sdom pa dañ sku gsuñ thugs gsum lhan cig skyes kyi
he ru ka gcig gi ño bor sdom pa ste / 'Saṃvara is the supreme
 assembly. "The causes of saṃvara" are actions of three secrets,
 i.e. body, speech and mind of all the buddhas; it is (or, the
 truth is) also the cakras of body, speech and mind. "The way
 of saṃvara" is (the state) in which all these causes of saṃvara
 are inseparably bound together into one; it is (the state in
 which) sukha and śūnyatā are bound together into one; and (in
 which) the three, i.e. body, speech and mind are bound together
 into the essence of one innate Heruka'. (Vol. 157, 10-4-4 f.).

Subsequently, he quotes a passage, which is verse 18 and the second pāda of verse 19 of chapter 3 of the Saṃvarodaya as evidence; the quotation is as follows:

sku gsuñ thugs kyi yañ dag las // rnam pa thams cad gcig sdom pa //
sdom pa bde mchog byañ chug ste // brjod par bya min bstan du med //
ḥdus pa sdom pa dag gi mchog // (Vol. 157, 10-4-6 f.).

Here, we imagine that the original meaning of saṃvara has changed into "unity" or "union" via the intermediary of the Tibetan word sdom pa. In the last half of this explanation sdom pa is apparently

used as a past participle passive; and here we suppose that bTsoñ kha pa intentionally used sdom pa instead of bsdoms pa²⁵ or bsdams pa in order to emphasize the word saṃvara. But in the quotation this is not applicable; it is not possible to take rnam pa thams cad gcig sdom pa as the meaning of rnam pa thams cad gcig tu bsdoms pa.

Thus, as far as bTsoñ kha pa is concerned, we can imagine that the original connotation of saṃvara changed into "union" or "unity" through the intermediary of sdom pa, which was at first used to translate the etymological meaning of "religious observation". But, this discussion must be regarded as futile, since we find in the Saṃvarodaya itself an example in which saṃvara can be identified with the assembly (milana)(3-19).²⁶ We should be content for the present with the fact that our idea of dākinījālasaṃvara leaves room for further study of these changes in connotation.

Originally, dākinījālasaṃvara was used to show visually the pleasure which is to be realized in the assembly (dākinījāla), it is to be identified with the supreme pleasure which is one of the aspects of the ultimate reality. Thus, the word saṃvara, being always accompanied by the vision of this assembly, came to mean the assembly itself in which this pleasure (saṃvara) is actually realized.

25

In sKai ldan grags pa's Cakrasaṃvara-pañjikā (No. 2121), dākinī-jālasaṃvara is explained as follows: mkhah hgro ma ni khams gsum thams cad na gnas pa rnams so // de rnams kyi dra ba ni tshogs so // dehi sdom pa ni yañ dag par bsdoms pa ste // sba bar bya ba shes bya bañi tha tshig go // (Vol. 49, 4-3-3 f.). 'dākinī means everyone who exists in the three worlds. Their jāla is assembly; saṃvara of it is (the state in which they are) completely bound (together); it denotes something that is to be concealed.' Here we find bsdoms pa; the Sanskrit word for yañ dag par bsdoms pa must be saṃvṛta (what is concealed). This explanation refers to another aspect of the meaning of saṃvara.

26

milanaṃ saṃvaraṃ varam can be translated as "saṃvara is the highest assembly".

This actual assembly, in which all the members are fused into one through the pleasure experienced in common, may easily be identified with the enlarged connotation of saṃvara as the state in which all the aspects of the world are fused into one as the essence of Heruka as is shown in bTsoṅ kha pa's first explanation.

As a result of this discussion, we can assume, with some certainty, that saṃvara need not be explained by bTsoṅ kha pa's abovementioned explanation or by Snellgrove's terminology.²⁷ In hearing the word ḍakiniṭṭjālasaṃvara or saṃvara what we should do at first is to imagine visually the scene of the secret assembly of practitioners and their female partners as we have already discussed.

2) The individual existence.

It has already been pointed out that the medium of attaining the ultimate reality is the human body. With regard to the human body, the doctrine of the four cakras is well-known; this doctrine reflects a kind of sexual yogic practice, or in other words, it adapts methodological reasoning to the actual sexual yogic practice. Besides this, we find another idea which must reflect another kind of practice; we call it "the theory of internal pīṭha".

The followers of the tantric cult all had the same general ideas about the human body. According to them the body consists of seventy-two thousand subsidiary veins, one hundred and twenty principal veins, twenty-four abodes of veins (pīṭha), the three veins and the four cakras. In the actual method of practice, some of these elements assume varying degrees of importance.

27

For example, the translation of saṃvara by "union" in the following phrases would simply be equivalent to tautology: sarvākāraikasaṃvara (Hevajra, I,x,1; Saṃvarodaya, 3-18) or sarvadharmāikasaṃvara (Hevajra, II,x,1).

a) The theory of internal pīṭha.

Pīṭhas are abodes of veins (nāḍīsthāna) (7-3); as is known from chapter 7, they are actually parts of the body. In this chapter, twenty-four countries are enumerated such as Pullīramalaya, twenty-four pīṭhas such as the head and twenty-four humours which flow in these veins (or, intestines in which veins flow) are enumerated; these correspond to each other. These twenty-four countries are called the external pīṭhas (bāhyapīṭha).

The human body is an aggregate of these twenty-four internal pīṭhas which are the abode of twenty-four veins (13-41, 42). This idea of the human body as an aggregate is unconditionally identified with the idea of the highest God. The second line of 13-42 says as follows:

evaṃ piṇḍamayāṃ vīraṃ sarvabuddhasamo hy asau //

'Thus, the hero²⁸ is made of "lump", and he is indeed equal to all the buddhas.'

Here, we notice a tendency to identify the individual with the universal through the medium of their qualitative or structural similarity; the human body and God are identified because they are structurally similar, as both are aggregates of pīṭhas.

Now, we must discuss a passage in which the meaning of pīṭha, "the abode of vein", appear to be in the process of taking on the meaning of "vein". In 9-20, the internal pīṭha is said to be nāḍīkarūpa (the form of vein); it is said in the next verse:

'Its form (= nāḍīkarūpa) has the aspect of deities; for this reason the body consists of the lump (piṇḍa) of them; he (who has this body) is equal to all the buddhas (9-21).'

28

Here, it is not clear why vīra is neuter. MS A reads dehaṃ instead of vīraṃ; this is quite probable. See 9-21.

In explaining this pinda, Ratnarakṣita's Pañjikā says as follows:

'(The body) "consists of the lump of them"; this means that, that which consists of the complete collection of these twenty-four countries such as Pullīra and so on which have been distributed to ten (places of pilgrimage) such as pīṭha and so on, (twenty-four) goddesses such as Pracanda²⁹ and so on and (twenty-four) heroes such as Khaṇḍakapāla and so on (each of whom corresponds to each) of these countries, is the body of a yogin.' (Vol. 51, 87-5-2 f.).

In this case, the body is identified with the world and the mandala of deities

We find the same situation in the Saṃvarodaya itself; in chapter 29, which is not given in our edition, there occurs the following passage:

svabhāvaṃ saha jām ity uktāṃ sarvākāraikasāṃvaram /
mandalaṃ saiva saṃvittih sarvākāravilakṣaṇā //
ḍākinyo nādikāḥ sarvāḥ sarvāyatanamandalam /
sarvāny ekarasāpattau sphuritā herukakṛtiḥ //

Some MSS read skandhāyatanamandalam instead of sarvāyatanamandalam.

As points of detail are not yet clear, we only give a provisional translation of the main points:

'(The truth) is saṃvara in which all the aspects of the world are fused into one; it is the mandala. Ḍākinīs are veins; when all of them, which are at the same time all the aspects of the world as is expressed as skandhas or āyatanas, are fused into one and the same taste, it appears as the figure of Heruka.'

29

This explanation refers to the enumerations and correspondences of countries, gods and goddesses which are frequently mentioned in the Abhidhanottara and the Yoginīsaṃcārya. See note 1 to the English translation of chapter 7.

Here, the word "veins" conveys the same meaning as the pīthas (mentioned above) and the veins are identified with dākinīs.

Consequently, the human body which is an aggregate of veins is identified with the assemblage of dākinīs (dākinījāla, maṇḍala)³⁰

When the pleasure is realized in the assembly, it becomes Heruka himself; when the individual pleasure is realized within the human body through some kind of yogic practice, the practiser becomes Heruka himself. Thus, we find that the theory of internal pītha is the outcome of an effort to reason methodologically about yogic practice, but we have not yet been successful in reconstructing the form of the practice in this case.

b) The theory of the four cakras.

The theory of the four cakras and the three veins, that is, Lalana, Rasana and Avadhūtī is fully explained by Dasgupta; we find nothing to add to his explanation.

This theory itself is already well-known. Its outline is as follows: four cakras (centres of veins; in Dasgupta's word, plexus) are postulated in the human body; they are, from the lowest to the highest, Nirmāṇa-cakra, Dharma-cakra, Sambhoga-cakra and Mahāsukha-cakra, and are at the same time lotus-flowers of sixty-four petals, eight petals, sixteen petals and thirty-two petals respectively; these are located in the navel, the heart, the throat and the head respectively. These four correspond to the four kinds of joy, that is, ānanda, paramānanda, viramānanda and sahajānanda.

30

The passage 3-2 (discussed above) can be interpreted similarly; i.e. the body is equivalent to the maṇḍala. The expression 'it completes the process of perfect enlightenment' means that the practice depending on this idea is a kind of utpanna-krama.

Three principal veins are also postulated; the left vein is Lalanā and conveys the semen; the right is Rasana and conveys the menstrual fluid, in Dasgupta's word, the ovum. These two veins correspond to prajñā and upāya or śūnyatā and karuṇā. They meet at the region of the navel, from which the central vein Avadhūtī starts. The confluence of Lalanā and Rasana is the union of prajñā and upāya; and consequently the bodhi-mind (bodhicitta) originates at Avadhūtī. This reflects the actual sexual yogic practice, and represents at the same time the union of the semen and the ovum; and through this union bodhicitta (a mixture of the semen and the ovum) is produced at the navel.

The bodhi-mind thus produced at the navel, the Nirmāṇa-cakra, proceeds upwards through Avadhūtī, and finally reaches the head, the Mahāsukha-cakra; thus, mahāsukha is realized.

This ascending process of bodhicitta, which reminds us of the process of the promotion of bodhisattvas from their first stage (Pramuditā-bhūmi) to the tenth stage (Dharmameghā-bhūmi), seems to be a typical expression of utpanna-krama. And at the same time, it prepares a theoretical background to the actual yogic practice; through the sexual union, bodhicitta (a mixture of the semen and the ovum) is produced at the navel region of a yogin. The yogin makes this bodhicitta go upwards through yogic practice.

When this bodhicitta stays in the navel, the usual joy (ānanda) is experienced by the yogin; when it proceeds to the heart, paramānanda is realized. Thus, when bodhicitta reaches the Mahāsukha-cakra which is located in the head, sahajānanda is experienced by him; this is the great pleasure (mahāsukha). Here also we find the individual, sensory pleasure and the universal, ultra-sensory pleasure (mahāsukha) are unconditionally identified through the medium of their qualitative similarity.

Dasgupta says that the cakra theory of the Saṃvarodaya is an anomaly; but actually it is fundamentally the same as the usual cakra theory (see above). It is mentioned in verses 19 to 31 of chapter 31; it has already been discussed by Dasgupta.³¹ But, there are minor differences between his and our interpretation and reconstruction of the text from a manuscript belonging to the Asiatic Society of Bengal (MS I in our edition). We must therefore discuss this matter again.

In the head is located the Mahasukha-cakra; this is a lotus-flower of four petals and is itself located in a lotus-flower of thirty-two petals. This image of the Mahasukha-cakra is slightly different from the usual. The Saṃbhoga-cakra is a red lotus-flower of sixteen petals; it is located in the heart (31-24). The Dharma-cakra is a lotus-flower of variegated colour with eight petals; it is located in the heart (31-25). In the navel, there is a blue lotus-flower of sixty-four petals; though the Saṃvarodaya does not mention its name, this lotus-flower is nothing but the Nirmāṇa-cakra (31-27). To these four cakras the characters Ha³², Om, Hum and Am correspond respectively.

Below the Nirmāṇa-cakra are seventy-two thousand minute lotus-flowers, that is, "the place of the knot" (kandasthāna) and the blue lotus-flower is founded on this kanda (31-28). The idea of kanda still requires further clarification; we should begin our discussion from verse 28 which is as follows:

31

Dasgupta, op. cit. p. 148 f.

32

It must very likely be Ham; this is confirmed only by MS L of the Skt. MSS. bTsoñ kha pa's commentary on the Cakra-saṃvara mentions the usual cakra theory (Vol. 157, 17-4-6 f.); here, the character located in the head is Ham. In the cakra theory of Stobs chen ye śes rgyal bāhi rgyud (No. 56) (Vol. 3, 30-3-2 f.), the character corresponding to the Mahasukha-cakra is Hum of white colour.

tasyādhaḥ sūkṣmapadmeṣu kandaśthāneṣu sthāpayet /
dvāsapatisahasreṣu kanda ādhāram ucyate //

This verse contains a syntactic difficulty. We think that the object of sthāpayet is the Nirmāṇa-cakra or the blue lotus-flower of sixty-four petals. Below this Nirmāṇa-cakra exist seventy-two thousand minute lotus-flowers which are, as a whole, kanda-sthāna; the words sūkṣmapadma, kandaśthāna and dvāsapatisahasra therefore carry the meaning of nominative case. But, on these minute lotus-flowers, or on this kanda, the Nirmāṇa-cakra is to be founded (sthāpayet); therefore, these words were shown in locative case. Dasgupta's explanation of this verse is 'slightly below is the kanda which is the receptacle of all the nerves numbering seventy-two thousand in all'; but this is not acceptable.

Dasgupta takes the next verse (31-29) as referring to kanda, but not to the Nirmāṇa-cakra; yet both interpretations are possible from the context. If it is to be taken as referring to kanda, the situation is as follows: Lalana of the nature of prajñā and Rasana of the nature of upāya meet at this kanda; and here originates bodhicitta. Bodhicitta proceeds upwards through Avadhūtī and at first reaches the Nirmāṇa-cakra, where ānanda is realized. In this manner, it finally reaches the Mahāsukha-cakra. This makes good sense; but at least in the context of the Saṃvarodaya, there is some counter-evidence. The second line of 31-29 says that the character Am exists in the middle of these two veins; but Am is already situated in the Nirmāṇa-cakra. It is difficult to imagine that Am should be situated in the Nirmāṇa-cakra and at the same time in kanda.

At the beginning of chapter 5, two veins are mentioned; that is, the left vein, the moon, ālī and the right vein, the sun, kālī. These

two veins must be Lalana and Rasana as is said by Dasgupta himself.³³ This left vein starts from the throat and reaches the navel but not kanda, and the right vein (Rasana) starts from the navel, but not from kanda, and reaches the throat.

Dasgupta's interpretation might have its reasons in tantras other than the Samvarodaya; but we believe that in the light of the context of the Samvarodaya verse 29 and verses 30 and 31 in fact mean the Nirmana-cakra.

Thus we find that the cakra theory of the Samvarodaya is itself not very different from the usual cakra-theory. Then, why is it anomalous? The anomaly lies in the fact that an explanation is attached to each of these cakras; for example, verses 21, 22 and 23 are the explanation attached to the mention of the Mahasukha-cakra. We presume that these are explanations of the four cakras in relation to the buddhakayas. The reason for this presumption is based on the explanation of the Dharma-cakra; it is said as follows:

'In the middle of it is consciousness (viññana); it is ever-risen and all-pervading; it is the self-produced wisdom and is the receptacle; (this) consciousness is the supreme Lord (31-26).'

This explanation is exactly applicable to the concept of dharma-kaya as viññana, especially, alaya-viññana which is suggested by the word 'receptacle' (adhara) in this verse. The relation between the ultimate reality and viññana and jñana has already been discussed before.

Likewise, 'the goddess' mentioned in verses 29, 30 and 31 is a figurative expression of the nirmana-kaya of the buddha; here we can replace the word 'goddess' by the word nirmanakaya of the buddha;

for example, the nirmana-kaya of the buddha 'appears in various forms' (31-29).

In the case of the Sambhoga-cakra, this kind of explanation is lacking.

If verses 21, 22, and 23 give an explanation of mahasukha-kaya, how can the concept of mahasukha-kaya be reconstructed? These three verses must be discussed in this context, although some uncertainties will remain.

Verse 21 refers to digits of the moon (kala). Dasgupta, without showing his source, makes a very useful suggestion concerning kala; he mentions the relation between the four kinds of anandas and sixteen kalas as follows:

"Of the sixteen digits of the moon, the first five represent Ananda, up to the tenth is Paramananda, up to the fifteenth is Viramananda and the sixteenth represents Sahajananda."³⁴

This is exactly applicable here; 'the yogini is the sixteenth digit'³⁵ of the moon' means that mahasukha-kaya is equivalent to sahajananda. The same situation is mentioned in verse 23; 'her nature is sahajananda' means that the nature or essence (svabhava) of mahasukha-kaya is sahajananda. 'In the abode of truth', mahasukha-kaya is 'in the form of pleasure'. Mahasukha-kaya is 'the support of buddhas and bodhisattvas, "the holder of diamond" (31-23)'. 'She is formed of the four (kinds of) joy in the form of (both) cause and result (31-22)' means that mahasukha-kaya which is itself sahajananda includes all four anandas; the word mahasukha-kaya means mahasukha

³⁴

Dasgupta, op. cit., p. 176.

³⁵

Dasgupta incoherently reconstructs this passage as follows:

"Inside is the Yogini of sixteen kalas or digits of the moon."
op. cit., p. 148.

itself, that is a kind of buddha-kāya. Mahāsukha-kāya is the expression of the aspect of supreme joy of the ultimate reality and comparable to the aspect of ananda of Brahman.

The first line of verse 22 alludes to Avadhūti; mahāsukha-kāya is figuratively expressed as Avadhūti.³⁶ The expression 'in the conventional truth, she is like a kunda-flower (31-23)' may suggest the same idea; 'kunda-flower' alludes to bodhicitta (see 8-31).

From these discussions, we find that this image of the human body, the theory of the four cakras, offers a well-organized methodology of utpanna-krama, the ascending process which leads to the ultimate reality. In other words, it provides theoretical proof that it is possible to attain enlightenment through the medium of the human body.

3) The relationship between the ultimate reality and the individual existence.

In the problems we have already discussed, those of utpatti-krama and utpanna-krama have already been included.

In the discussion of the ultimate reality, we have already alluded to the theoretical side of the utpatti-krama. It is the emanation of the phenomenal world from jñāna (sarvajñajñāna) as the dharmakāya of the buddha, or expressed differently, it is the self-evolution (pariṇāma) of the fundamental consciousness (ālayavijñāna); these are mentioned in chapter 4. The practical aspect of the utpatti-krama is the ritual of imagining (chapter 13) or constructing (chapter 17) or taking part (chapter 8) in the mandala.

36

But, it is said in 7-22 as follows: 'Lalana is the sambhoga-kāya; Rasana is the nirmāṇa-kāya; and Avadhūti is dharmakāya itself'. This system is different from the system of the four kāyas; an attempt to conciliate these different systems would be both difficult and superfluous.

Utpanna-krama actually designates the various practices conducted for the attainment of the ultimate reality. A typical example are the five kinds of methods mentioned in the Pañcakrama; in chapter 3, we find various expressions borrowed³⁷ from the Pañcakrama.

This problem of utpanna-krama has been dealt with in relation to the individual existence, i.e. the human body. In other words, the analytic thinking of the tantric masters about the structure of the human body found in the Saṃvarodaya was a result of an attempt to guarantee the possibility of attaining the ultimate reality and to prepare the methodological foundation of actual practices.

In the Saṃvarodaya, various systems of practice are mentioned. For example, "the yoga of wind" (vāyuyoga) is mentioned in chapters 5 and 6; the relation of this practice to the vajrajāpakrama of the Pañcakrama is notable. The detailed procedures of this practice are not simple; we have not yet been successful in reconstructing the whole system. For example, "the yoga of wind" contains a correspondence between the circulation of internal vital wind, which is expressed as the sun and the moon, and the circulation of the sun and the moon. The circulation of the sun and the moon is also the circulation of the cosmic wind, the essence of which is nothing but Heruka (5-42). "The yoga of breathing" can also be found in this tantra; it purifies the body through recaka (exhalation), pūṛaka (inhalation) and kumbhaka (stopping of the breath) (19-28 f.), which correspond to the three aspects of the Lord, nirṇānakāya, dharmakāya and sambhogakāya respectively (5-49). We notice the idea that the internal saṃkrānti, the upward process of bodhicitta

37

Chapter 6 of the Saṃvarodaya contains many verses in common with the vajrajāpakrama of the Pañcakrama. By comparing them, we know that these verses in the Saṃvarodaya are borrowed from the Pañcakrama because the logically well-regulated context of the latter is disordered in the former.

(a mixture of the semen and the ovum) (31-18 f.) corresponds to the external samkrānti, the transference of the sixteen digits of the moon (31-33 f.). Each of these practices is clearly connected with the images of the human body.

Behind these arguments there lies a noteworthy tendency in the way of thinking. This is the tendency to identify the universal with the individual, the cosmic or global with the internal or corporeal, or the ultra-sensory with the sensory through the medium of structural or qualitative similarity.

This tendency is a reflection of the basic idea of the world, an idea which was widely held even if not always consciously: it is the fundamental postulate or belief in the unconditional identity of the ultimate reality and the individual existence, the archetype of which can easily be traced to the idea of the identity of Brahman and Ātman.

This tendency is found, in the discussion of the utpatti-krama. The mandala can be seen and can be constructed, it may also be the actual assembly; this mandala is identified with Heruka himself or with the assembly of deities around Heruka through the medium of structural similarity.

With regard to utpanna-krama, this tendency becomes noticeable from the manner in which the theoretical background to the practices is presented. The practices are based on the structural or qualitative similarity or correspondence of the human body to the ultimate reality. The methodological concern must have been to discover this similarity or correspondence as the foundation of the identity already known intuitively, and to give expression to it by a word applicable to both the universal and individual aspects. The idea of the human body expressed in the texts is the result of this concern.

For example, in the case of the theory of internal pīṭha, the tantric masters found the structural similarity between the human body and the world and gave the expression pīṭha; this structural similarity as the aggregate of pīṭhas confirms the identity and makes them convince the efficacy of their practice corresponding to this theoretical side. The tantric masters found the similarity of the individual body and the mandala in the fact that the former is an aggregation of veins and the latter an aggregation of ḍākinīs as has already been discussed.

In the case of the cakra theory, the individual side of bodhicitta (a mixture of the semen and the ovum) is identified unconditionally with the universal side of it (the union of prajñā and upāya). In fact the tantric masters applied the term bodhicitta to the mixture of the semen and the ovum in order to express the more fundamental idea of the identification of the union of the male and the female elements with the union of prajñā and upāya, which is the original meaning of bodhicitta. This word bodhicitta guaranteed methodologically the efficacy of their practice. In the case of the upward course of this bodhicitta, the word kalā (the digit of the moon) must have been thought to have the same function, but we are not yet fully informed about this practice (31-33 f.).

This tendency of their way of thinking which underlies various arguments of the Saṃvarodaya-tantra, seems to be the reflection of an accepted Weltanschauung. Utpatti-krama and utpanna-krama are only part of an effort to put into words this theory of the original identity of the universal and the individual expressed in different ways. In this connection the idea of the mandala is important.

Viewed from the standpoint of utpatti-krama, the mandala is the figurative expression of the emanation of the world from Heruka.

Viewed from the standpoint of utpanna-krama, the mandala (the figurative expression of the phenomenal world) is nothing more than the contents of Heruka, who is the ultimate reality.

The followers of the tantric cult actually saw, draw or constructed the mandala, or they may have taken part in the rite of the mandala (chapters 8 and 17). The structural similarity of this visual mandala with the mandala of Heruka (the assembly of deities around Heruka as described in chapter 13) brought a convincing assurance of the ultimate success of the tantric practices.

The idea of ḍākinījālasaṃvara is a medium devised in order to express this idea of the world, the original identity of the ultimate reality and the individual existence.

This word ḍākinījālasaṃvara formed a logical sequence to the connotation of mandala in ḍākinījāla, and preserved the efficacy of the visual medium. It further introduced an additional very effective principle, in that it mediated between the universal and the individual, the connotation of sukha in saṃvara.

We conclude: the system of the Saṃvarodaya-tantra can be supposed to reflect the system of the Saṃvara literature. Its originality lies in the fact that it introduces the concept of ḍākinījālasaṃvara, and in the fact that this concept is an effective expression of a fundamental image of the world, an image which conveys the original identity of the ultimate reality and the individual existence.

CHAPTER II. EXPLANATION OF THE PROCESS OF ORIGINATION.¹

The venerable lord said:

'Well done! Well done! O Vajrapāni! You have praised the origination of the secret. Then, I will explain the meditation upon the process of origination (1).

In accordance with the nature of their various deeds (karman), creatures are of four kinds according to their mode of birth: oviparous², viviparous, creatures produced from moisture and beings born apparitionally (2). Geese, cranes, peacocks, parrots, thrushes and so on are oviparous; elephants, horses, oxen, buffaloes, asses and human beings are viviparous (3). Worms, insects, butterflies, fishes and so on are creatures produced from moisture. Deities, infernal beings, (beings in) the intermediate existence (between death and rebirth) (4), beings of the first aeon (prathamakalpika) and so forth, they are beings born apparitionally.

(In the continents:) Pūrvavideha, Aparagodāni and Uttarakuru (5), live³ people of great wealth, who are dull, torpid and ignorant.

1

It is rightly noticed by Tson kha pa (op.cit. Vol. 157, 5-5-5 f.) that this explanation of utpatti-krama of the Saṃvarodaya is very peculiar. He says: 'In the first chapter of the Saṃvarodaya, questions are put about the utpatti-krama; the answer is given in the second chapter. In this chapter, the following things are mentioned: the four modes of birth; the four continents of mankind; three of these are the lands of enjoyment, and the fourth Jambudvīpa, is the land of deeds; the fact that the most excellent part of this (Jambudvīpa) is the middle country; the four kinds of fruits which depend on the ways of abstaining from desire; the fact that deeds done in the past cause death and birth to people who do not understand Mayopama-samādhi; the fact that after death one stays in antarābhava; the manner in which one is placed in the womb according to the union of the father and the mother; and the manner in which one comes into the world from the womb. But, by these things, the utpatti-krama is not (truly) explained; to examine the utpatti-krama by comparing it to birth, death and antarābhava is nothing but stating similarity (mthun yul). He also says that in the tantras of the Saṃvara literature this way of explaining utpatti-krama by comparing its features to birth, death and antarābhava occurs only in this tantra.

2

andaja and jarāyuja are mentioned in ch. 9 of the Abhidhānottara; but the context is very different.

3

saṃvartya is difficult to explain; we relied provisionally on tib. yañ dag htsho.

The people of these three continents neither distinguish nor investigate⁴ (6). Jambudvīpa is proclaimed to be the land of deeds for him who is well born there. Deeds, good or evil, may be inferior, middling, or superior. Here (in Jambudvīpa), the fruition (of deeds done in) former birth is seen in all beings (7); they are defiled⁵ by self-conceit and envy, they are false, fraudulent and haughty, darkened⁶ by greed, anger and folly and so on, and afflicted by old age⁷ and illness (8).

People, the chosen and the best in Jambudvīpa, are born in the middle country. They are slow or medium or sharp as to their faculties of sense; and their birth depends on good deeds in former lives (9). Birth as a man is the first great fruit; to renounce one's own household is the obtaining of the second; to complete the renunciation for the sake of merit⁸ is the third, and the obtaining of concentration of the mind is said to be the fourth great fruit (10).

People, in whom the impressions of the defilements (kleśa) have been strengthened since beginningless time, do not understand the Māyopama-samādhi⁹ (the meditation on the similitude of the phenomena to illusion) (11). Thus, deeds done in the past cause death and birth.

As long as a man does not possess the totality¹⁰ (of conditions), he stays in antarābhava (the intermediate existence between death and rebirth) for seven days (12). A being in antarābhava is, like a traveller, (drawn) by means of the cord of karman, born in (one of) the six conditions of existence (gati) (13).

⁴ MS A nirvīkalpādicārinah and also tib. possibly suggest the reconstruction nirvīkalpāvicārinah; but, tib. taken alone suggests nirvitarkavicārinah.

⁵ tib. shows that the translator took duṣṭa as a noun 'hate', and that he took this phrase as a bahuv. Pañj. agrees with tib.

⁶ tib. omits -andha.

⁷ tib. rims = jvara 'plague'.

⁸ Pañj. de bshin gśegs paḥi bstan pa la rab tu ḥbyuḥ ba; 'to join the priesthood according to the doctrine of the tathagata'.

⁹ See Pañcakrama, edit. by de la Vallée Poussin, Louvain, 1896, IV-6.

¹⁰ Pañj. tshogs pa ni skye baḥi rgyu mthah dag ste "'the totality" means all the causes of birth'.

One should regard the state of him who is born in this world as coming from the union of the mother and the father, and so on (in the following manner): Vehement joy¹¹ is caused to enter through the way of the mouth (14). Consciousness, as if riding on horseback, mounted on the chariot of the wind, arrives very swiftly in a mere moment (15), arousing seventy-two thousand veins in the same moment, and reaches the highest joy (that is) āli (vowels) and kāli (consonants) melted together (16). It exists between semen and blood in the form of a dot (bindu). The first (stage of it) is in the shape of kalala, and the second (stage) is arbuda (17). In the third stage, it appears as peśī; and the fourth is that of ghana; and being urged by the wind, it assumes the form of flesh (18). After the lapse of five months from the seed the five members are produced. After seven months the hair of the head and the body, nails and the mark of sex appear (19). In the eighth month, sense-organs and definite shape are manifested; in the ninth month it is completed; and in the tenth month consciousness appears (20).

Kalala is the form of Akṣobhya; arbuda is Ratnasambhava; peśī corresponds to Amitābha, ghana to Amoghasiddhi and prasākha to Vairocana; thus it manifests the five aspects (21). Akṣobhya is urine and the menstrual fluid¹²; Amitābha is of the nature of semen; Ratnasambhava is nothing but a tubercle (pinda¹³); and as the mixture of them exists Vairocana (22).

There are two veins in the middle of the yoni (the female organ) and likewise to the left and the right. One should know that semen is on the left and the menstrual fluid on the right (23). The union of both, (that is,) oneness, is dharmadhātu (the sphere

11

tib. śin tu dgah dañ bcas stobs kyis; 'through the energy which goes together with extreme joy'. Panj. śin tu hes par dgah bahi stobs agrees with tib.

12

From the context, 'Akṣobhya is urine and (Amoghasiddhi is) the menstrual fluid'. Panj. treats urine, the menstrual fluid and semen separately; therefore, it does not deny the possibility of connecting Amoghasiddhi, which does not occur in this verse, with the menstrual fluid.

13

Panj. goñ bu tsam shes pa ro la sogs pa rnam hduṣ paho "nothing but a tubercle" means the collection of sedimentary substances and so on'.

of dharmas) by its nature.¹⁴ Karman is obtained by means of the seed, which is made to move to and fro by winds (24). It is certain that it (the seed) faces the aperture of the yoni, that is, "the origin of dharmas". Dwelling on the right side of the abdominal cavity, it is facing "what is sitting upon the hams".¹⁵ Prajñā, residing on the left side, would be facing the womb (25).

A man of good intellect should discern the right moment, at the time when the process of placing the seed occurs. The wind which circulates on the right side will always be a man (26). The wind which circulates on the left side will certainly be a woman; and the seed existing between both will always be a hermaphrodite (27).

One should know that the sphere of water belongs to the father; the sphere of fire belongs to the mother. Skin, flesh and blood comes from the mother; so it is said (28). Tendon, marrow and semen are said to come from the father. The aggregate of those six is pinda (the globular body), as is said by Vajrasattva (29).

Rūpa (material form), vedanā (perception), saṃjñā (conception), saṃskāras (formative tendencies) and viññāna (knowledge) are identical with the nature of the five buddhas; the origination of (the five) skandhas (constituent elements) is determined (30). Recognizing (the process of) birth to be the process of origination (utpattikrama), a man should attain the state of the completely enlightened (samyaksambuddhatva).

This is the complete knowledge of the skandhas as told by him who tells the truth (tattvavādin).

Chapter two: explanation of (the process of) origination.

14

tib. chos kyi dbyiñs kyi rañ bshin no and Pañj. chos kyi dbyiñs kyi rañ bshin nid should be translated 'is nothing but the nature of dharmadhatu'; but it is not possible to decide whether or not it agrees with the reading of all MSS except A: they read dharmadhātusvabhāvatah.

15

From the context, MS A utkutukasthito might possibly be taken as a modifier of upāya; '(upāya) is sitting upon the hams'. But this does not show to what this upāya is facing (abhimukham).

CHAPTER III. EXPLANATION OF THE PROCESS OF COMPLETION.¹

'Now, I will explain the contemplation of the process of completion; by merely understanding this a man may speedily attain fulfilment (siddhi) (1).

Depending upon the mandala of body (kāya), the body (vigraha) of dharma and the body of enjoyment (sambhoga) exist; it completes the process of perfect enlightenment, so it is called the mandala of body (deha) (2). A yogin inferior or medium should meditate on (the process of) origination; this is the meditation on mandala (for him). The superior yogin should contemplate the mandala of the aspect of instantaneousness to be only-mind; this is the contemplation of the process of completion through the yoga of the aspect of instantaneousness (3).

The three worlds are in themselves the pavilion (of the mandala); living beings (in these worlds) and nothing but deities

1

bTsoñ kha pa relates this chapter to pañca-krama as follows: 'utpanna-krama is mentioned in the third chapter (as follows): by the manner in which one imagines deities of utpanna-krama through "instantaneousness" (verse 6), various "means and power of compassion" (verse 8) and by the mention that "the interpenetration (yuganaddha) (of these two) occurs without exertion, and is in itself the mandala, the highest essence" (verse 9), Yuganaddha-krama (is mentioned). By the mention that "neither is it non-existence, as it is without interruption and its origination, in the conventional sense of the word, is possible. Its own essence being the joy innate (in everybody), it is inherent (sahaja) in every dharma. It is based upon itself (svādhīsthāna), as it is self-existent" (verses 13, 14), Svādhīsthāna-krama which has abandoned the side of non-existence and interruption, for the reason that the origination of the illusional body (māya-deha), in the conventional sense of the word, proceeds from the illumination, (is mentioned). By the mention that "the clear and perfect awakening (abhisambodhi) to the great pleasure (mahāsukha) is the highest mahāmudrā" (verse 16), (Sukha-) abhisambodhi-krama (i.e.) Prabhāsvara (-krama) is indicated.' (Vol. 157, 6-1-6 f.). Tsoñ kho pa says that Vajrajāpa-krama is mentioned in the fifth and sixth chapter of the Saṃvarodaya. For further references to the correspondence of Sukhabhisambodhi-krama and Prabhāsvara-krama, see Shinten Sakai: Chibetto-mikkyo-kyori no Kenkyu, Koyasan, 1956, p.114 f.

of the mandala; and in the middle of them, the yogin is the predominant deity of the mandala through the aspect of instantaneousness² (4).³ By the spell (mantra) Om āh hūm are signified the mandalas of body, speech and mind. Heavens, the earth and regions under the earth will instantaneously be of the one and the same figure (5). Through the yoga of the aspect of instantaneousness, the spell of instantaneousness should be recited; "the real pleasure of a multitude of ḍākinīs (ḍākinījāla) united with all the heroes" will result (6).

It is of the nature of the four dhātus(spheres), (the five) skandhas and likewise the six viśayas (object of senses). It is the wisdom of Heruka and the goddess; it should not be considered to be separated (7).

The circle (cakra) is sealed with the seal of suchness (tathatā, the real state of things); it is also emptiness (śūnyatā) like the sky. Tathatā is Nairātmyā⁴ and also the whole world; (Heruka is) the means (upāya) which is the power of compassion (8). The interpenetration (yuganaddha) (of those two) occurs without exertion, and is in itself the mandala, the highest essence (sāra).⁵

2

jhatitākāra occurs in ch. 56 of the Abhidhanottara (Vol. 2, 84-1-2). Chapter 53 of Skt. MS No. 173 of University of Tokyo, 170 b, l.4; chapter 55 of No. 474 of University of Tokyo, 200 b, l.1. A verse, identical with this one occurs in ch. 12 of the Yoginīsaṃcārya (Vol. 2, 240-2-4).

3

These two verses are quoted by bTsoñ kha pa (op.cit. Vol. 157, 12-5-8 f.). In this case he does not indicate the source, but just says 'in the commentarial tantra'.

4

Pañj. 'The whole world the true nature of which is tathatā is nothing but Nairātmyā; and she is also embraced by the vajra whose essence is the great pleasure (mahāsukha) and the great compassion (mahākaruṇā)'. The fact that the female partner of Heruka is called Nairātmyā is to be noted; this name, which is merely the name of the predominant goddess of the Hevajra-tantra, does not occur, at least, in the Laghusaṃvara and the Abhidhanottara.

5

These three lines are quoted in bTsoñ kha pa (op.cit. Vol. 157, 13-1-2 f.). The last line is related to Yuganaddha-krama of pañca-krama. See n. 1.

People try to grasp it by means of reflection and discrimination⁶; but it is unthinkable and indiscriminable (9).

It is the best of all the aspects; it is everything; still it is without aspect; and it is with the faculty of causing perception of pleasure. And, it is of the essence of existence and non-existence; it causes existence; and yet it is risen by itself (nityodita)⁷(10).

It is without superimposition⁸, without exertion and is the great pleasure (mahāsukha) which is ever-risen (nityodita). It arises through its own nature of being unproduced, when it itself is attained (11).

It is to be known introspectively as it is not senseless; it is neither a knower nor a seer.⁹ It is not unchangeable as it is without shape; still it is eternal as it does not change (12). Neither is it non-existence, as it is without interruption and its origination, in the conventional sense of the word, is possible. Its own essence being the joy innate (in everybody), it is inherent (sahaja) in every dharma (13). It is based upon itself¹⁰, as it is self-existent¹¹; it is intact, as it is without destruction.

Contemplation (of it) is also of this kind, as it is the perception of the taste of non-origination (14). Because, prajñā-wisdom, which makes them comprehend śūnyatā, is itself dhyāna (meditation). Thorough perception of every dharma is itself

6

tib. rnam par mi rtog sbyor bsams kyañ = cintā-avikalpayoge 'pi ? Pañj. gives only the first word of this pāda, i.e. 'sems'; this suggests that it reads citta-avikalpayoge 'pi = MSS BID. cintā- and citta- are paleographically indistinguishable. See J. Brough, op.cit., p.360.

7

For this pāda, tib. 'it is ever-risen (or always existent) as the worldly existence (bhava)'.

8

tib. sna tshogs spros pañi rtog pa med suggests nānāropam (= MSS BCDEP); but this is untenable.

9

Pañj. 'nor is it seen'; mig la sogs pañi dbañ pañi bgrod bya ma yin pa ñid las mthoñ bya min paho.

10

It is difficult to translate svādhiṣṭhāna. Our translation 'it is based upon itself', which is still provisional, depends on Pañj. rañ byin brlab dañ rañ byuñ ste / shes pa rañ ñid la gnas pañi phyir ro. But in verse 19, 'self-blessing'.

11

These five pādas are related by Tsoñ kha pa to Svādhiṣṭhāna-krama of pañca-krama. See n. 1.

contemplation (bhāvanā), but it is not (merely) the contemplation (as the means to attain the perception) (15). Likewise, the clear and perfect awakening (abhisambodhi) to the great pleasure is the highest mahāmudrā ("the great seal").¹² Those (various aspects of it) have been shown distinctively for the sake of making people enter into the truth of dharmas (16). Those are manifested only through the teaching of a good master; not in another way.

The samvara of every buddha is situated in the characters (of the word) "Evam"¹³ (17). Deeds of body, speech and mind are the one and only samvara in which every aspect of the world is gathered.¹⁴ The Samvara is the best pleasure (sukhavara), the enlightenment (bodhi); it is neither spoken nor shown (18).

12

Tsoñ kha pa relates this line to Sukhābhisambodhi-krama. See n.1

13

Pañj. explains the meaning of "Evam" as follows: 'To explain in what "those" are manifested "through the teaching of a good master", "the samvara" and so on are told. This is explained as follows: The character e of beautiful appearance, which is adorned with the character vaṃ in its centre, is the origin from which all the pleasures derive, and is the casket of the Buddha-jewel. This is to be explained as follows: In the event of consecration, in the union of vajra and padma, this, which is of the essence of the fourth consecration (caturthābhiṣeka), becomes distinct through the power of destroying the moon in the proper way according to the instruction of a good master. Or, the character e is of the essence of prajñā; it is the essence of nirmana-cakra (the body of emanation) and of sambhoga-cakra (the body of enjoyment), and exists on the navel and on the throat. The character vaṃ is of the essence of upāya and is itself the essence of sarvadharmamahāsukha-cakra (or, perhaps dharma-cakra and mahāsukha-cakra) and exists in the heart and on the top of the head. If a man imagines (these two i.e. e and vaṃ) united in the manner of saṃputa, sahaja-ananda befalls him. Or, if a man makes the character vaṃ, that is, the mind enter into the character e, that is, tathata (the true state of things), the same thing as is told before happens to him. This is explained by the fact that the act to make the mind enter into śūnyatā is to make (these two) one and of the same taste; it does not mean the union with the birth-place'. (Vol. 51, 80-2-1 f.). Arguments of this kind are quite commonly advanced in connection with evam maya śrutam. Ratnarakṣita mentions various ways of giving a secret signification to it (Pañj. Vol. 51, 74-4-6 f.); but this is not always coherent with the above-mentioned argument about "Evam". See Hevajra, I, 1, 22; btsoñ kha pa, op.cit. Vol. 157, 11-1-2 f..

14

See Hevajra, I, x, 41; Part I, p.139.

It is the secret of all the buddhas; it is the assembly (of all the buddhas), the highest saṃvara.¹⁵

This process of self-blessing has indeed been manifested through the skill of the good master (19).'

Chapter three: explanation of the process of completion.

15

These three lines are quoted in Tsoṅ kha pa (Vol. 157, 10-4-6) as an illustration of the meaning of saṃvara.

CHAPTER IV. PURITY OF DEITIES AS THE FOUR ELEMENTS, THE FIVE
ASPECTS AND THE SIX OBJECTS OF THE SENSES.

'Then, I will explain the nature of the four elements. Whatsoever it may be, every thing (in the world) is composed of (the four) elements (1).

Earth is that on which things exist; by fire everything is cooked. And, things are melted by water and moved forth by wind (2). Things exist in the sky, the region of śūnya, so they can originate in every place. Wherever one (of the four) exists, there exist everyone of the four (3).

Grasses, creepers and trees have only the consciousness of inanimate beings¹; living beings in the six conditions of existence (gati) live with consciousness (4). Thus, there will be totality as individuals (pinda) everywhere; know the worldly existence (in this way), you, men of good understanding!²

At the hour of death of living beings, wind is driven away everywhere (5). Fire abandons (its warmth³) at this moment and water will always become dry. Senselessness will spread⁴ in every articulation at all times (6). Only the element of earth remains as the hardness of body and so on. Thus, individuals are born or die, but the four elements are omnipresent (7).

Deities, demons (asura) and human beings are not born without these elements; deities and guardian gods of the world abide together (with the four elements) everywhere (8). They (the four elements) are always the object of thought and contemplation in all the vedas and canonical books; they are omnipresent, and upon them is based everything produced from the earth⁵ (9).

¹ jadā vijñānamātrakah (= MS A) '... are unintelligent (or motionless) and have only consciousness' is also possible.

² tib. 'Thus, all the beings in the world (or worldly existences) are to be known by the man of wisdom'.

³ Skt. omits a word corresponding to tib. drod.

⁴ For gata tib. de nas = tadā ?

⁵ tib. 'they are omnipresent, and exist in everything produced on the earth'.

It is agreed in every treatise that the four elements are the best⁶ and the most excellent. Wind is seen to be the breath of life (prāṇa); fire is the characteristic of life (10). Water is of the nature of amṛta; and earth is nothing but the place where the deity always exists. Consciousness (viñāṇa) is the highest lord (11). The wisdom (jñāna) occurs depending on it⁷; and aspects of the wisdom are five deities.⁸ Rūpa, vedanā, saṃjñā, saṃskāras and viñāṇa are respectively (12) ādarśa (-jñāna) (the mirror-like wisdom), saṃatā (-jñāna) (the wisdom of sameness), pratyavekṣaṇa (-jñāna) (the wisdom of analysis), kṛtyanuṣṭhāna (-jñāna) (the wisdom of carrying out actions) and suviśuddhadharmadhātu (-jñāna) (the wisdom of the sphere of dharmas completely purified). They are established in (this) wisdom (13), and, they are Vairocana, Ratnasambhava, Amitābha, Amoghasiddhi and Akṣobhya. Those five aspects are gathered in one, that is, the perfect enlightenment (saṃbodhi).

Viśayas are said to be six (14); they are colour and shape (rūpa), sound (śabda), smell (gandha), taste (rasa), what can be touched (sparśa) and dharma (object of manas-consciousness); those are said to be pure. Dhātus are said to be eighteen (15). Because they have the nature of skandhas, one should contemplate upon them as the sacred syllable; it will be the cause of the fruition (that is,) the state of a buddha (buddhatva).

It should be contemplated in the case of eyes and so on (16). The organ of vision (cakṣurindriya), (the object of the organ of

6

Pañj. suggests caturbhūta-aparam; hbyuñ ba bshi po gshan gtso bo shes pa hbyuñ ba bshi po rnams las gshan rnam par ses pa kho na gtso bo ste / de rnams sprul pa nid las te / "that which is other than the four elements is the most excellent" means that only the consciousness which is other than the four elements is the most excellent, because these (four elements) transform'.

7

Pañj. "it" means the consciousness which is equipped with the five elements'.

8

tib. 'the consciousness (rnam ses!) develops (itself) assuming the aspects of the five deities'.

vision, i.e. colour and shape), and the perception (by the sense of vision)⁹ are manifested miraculously by the diamond-like mind (cittavajra). The triad (of these three) will be the abode of splendour (prabhasvarapada) for the sake of the purification of its own nature (17). The organ of hearing, sound, and perception (by the sense of hearing) are imperceptible by their own nature; purity of the organ of smelling, smell, and perception (by the sense of smelling) is thought to be tathatā (the true state of things)¹⁰ (18). Taste, the organ of tasting, and perception (by the sense of taste) are pure in the true sense of the word; the organ of touching, what can be touched, and perception through touching are born like illusion by their own nature (19). The organ of consciousness (manas), its object (dharma) and perception through consciousness (manovijñāna) are of the nature of complete purity in their true essence. Consciousness (vijñāna) manifests itself in these six modes; it is "the receptacle" (ālaya), the tathāgata (20).

A man who dwells in the samādhi of the auspicious Heruka will attain the abode of splendour; it will be the abode free of imaginary constructions because of the union (yoga) of the objects of senses (viśaya) and the subject of these senses (viśayin) (in this abode) (21). Perceiving the purity of the viśayas, a man can abide in the best of all the aspects.

Though the buddha, dharma (teaching of the buddha) and saṅgha (the community of monks) are one, they appear as a triad through imaginary construction (22). The three recourses (śāraṇa), the three truths (tattva), the three bodies, the three liberations, the three faces, the three syllables and the three gods; (every one of those triads) will be (one), because they are identical in nature with the three worlds (23). Also the three mandalas, the

9

cakṣurindriyavijñānaṃ should be paraphrased as cakṣurindriya-rupa-cakṣurvijñānaṃ. Pañj. mig gi dbaṅ po daṅ yul gzugs daṅ mig gi rnam par ses pa ni bcom ldan ḥdas thugs rdo rje sems dpahi rnam par hphrul yin no // 'the organ of vision, its object, i.e. colour and shape and perception by the sense of vision are miraculous manifestations of the Lord Cittavajrasattva'.

10

tib. 'and likewise (tathā, de bshin), the organ of smelling, smell and perception (by the sense of smelling) are thought to be pure'? Pañj. 'rnam dag de bshin ṅid du dran' confirms the skt. text.

three yogas and the three ways are said (to be one); and likewise, the three śamayas, the three good deeds and the body, speech and mind (24), prajñā, upāya, and their union, the third, (each of those triads are one;) and, as observed, the three secrets are also (one) through their identity with the origin of dharmas (dharmadaya) (25). Because of the non-perception of (those) triads, and since those triads are of the figure of mantra, they possess the nature of the three veins (nāḍī); they are external and internal substances (26). The external ones are worldly dharmas; the internal ones are deities and so on. A yogin goes to the state of the buddha through the purity of the external and internal (triads) (27).

In accordance with the nature of the sphere of dharmas, deities are understood; because their nature assumes all aspects, goddesses are imagined (28). Vajrasattva exists in the form of the original god. In a pīṭha or a kṣetra, and in preconcerted gestures, the assembly of yoginīs and yogins takes place (29). And likewise, through the complete union in the state of non-duality, deities are manifested. Thus, innumerable deities are manifested; and innumerable¹¹ maṇḍalas are imagined (30).

Yoga of deities is unthinkable; and the play of buddhas is unthinkable too, as they possess the form of a multitude of dākinīs (dākinījāla) in union with the auspicious Heruka (31).

I have told the contemplation in which those two are undivided in essence. (Through it) one attains the idea that everything is non-dual and free from both object and subject (32). That which is called "the gross sound" will consist of subtle thought; the truth, devoid of consideration, is said to be the abode of it (33).'

Chapter four: purity of deities as the four elements, the five aspects and the six objects of senses.

11

tib. and perhaps Pañj. = saṃkhyāmaṇḍalakalpanā (= All MSS other than A) 'innumerable deities are manifested, (though) the maṇḍalas imagined (by us) are numerable'? The explanation given in Pañj.: grāṃs ni dkyil hkhor la bshugs pa rnam kho na ste spros pa rnam kyi ni ma yin no / '"numerable" refers only to the deities who reside in the maṇḍalas, but not to (all the deities) manifested'; this interpretation would appear to be far-fetched.

CHAPTER V. EXPLANATION OF THE COURSE OF THE MOON AND THE SUN.

'Then, I will explain the moon and the sun separately.

Those two move in due order to the left and the right (1). The vein facing downward, which starts from the throat and goes along the left to the circle of the navel (nābhimandala), is the moon, āli (vowels), and it brings the moon (2). The vein facing upward, which starts from the navel and goes along the right to the place of the throat, is the sun, kāli (consonants), and it brings the sun (3). The left vein is the way for entering; and the right is the parth of issue. The two nostrils are two gates according to the measure of veins¹ (4).

(The duration of time) from sunrise till sunset is a day; from sunset till sunrise it is a night (5). Day and night (aharniśa) is ahorātra (a day and night); prahara (an eighth part of a day and night) is called yāma. A day is known to be four yāmas; and likewise a night is four yāmas also (6).

Circulations (samkrānti) of the wind² of body are sixteen in a day and night, as this wind passes through both nostrils every half yāma (7). In three days beginning from the first day of the light half of a month, the wind blows to the moon in a half yāma (a day), and next three days, (it blows to) the sun; thus, it continues in this way till the fifteenth day of the light half of a month (8). In three days from the first day of the dark half of a month, the wind blows to that which is called the sun early in the morning (and next three days, it blows to the moon; it continues in this way) till the fifteenth day (of the dark half of a month) (9).

Veins should be known to be thirty-two³; (there are thirty-two) nādikās of a day and night (ahorātra). A fourth part of one prahara

1

tib. does not give a literal translation of nādi pramāṇataḥ; 'the manner in which two veins run from the two gates of nostrils is (as follows:)'. .

2

As is pointed out by Tsoñ kha pa (see note 1 of chapter 3), the doctrine of the wind discussed in this chapter is to be related to Vajrajāpa-krama of pañcakrama. Pañj. rdo rje hi bzlas pa hi rim pa hi yan lag rluñ gi de nid ni brjod par byaho.

3

With regard to the thirty-two veins, see Hevajra I, 1, 13 f.

is said to be one nādī or one ghatī (10). In a day and night there are sixty-four dandas; one danda is declared to be a half nādī or a half ghatī or an eighth of one yāma (11).

The going and coming of the wind is said to be the breathing (śvāsa) through the nose. People experienced in the yoga of wind know six śvāsas (a measure of time) to be one prāna (12). A danda of the first day of the period of the sun's progress to the north of the equator is fifty prānas and three śvāsas, to each one of the latter one fourth is added (13). A danda of the first night of the period of the sun's progress to the south of the equator is the same.

Increase and decrease of (the length of) each danda should be known (as follows) according to the division of time (14). Each danda increases or decreases eleven śvāsas and a fourth at each transit (through the signs of the zodiac), and a third śvāsa and a fourth part of a sixth (śvāsa) every day (15). The order of the circulation (of the wind) of every half a yāma being reversed, there will immediately be quarrel and so on; therefore a man of good intellect must consider this well (16). If the wind should circulate reversely for one or two or three or four or five or six days, then a big quarrel will occur (17). When it circulates reversely for half a month, serious disease will arise; and by the reverse circulation during one month, calamity occurs to his friends and relatives (18). If it circulates reversely for one and a half months, he will die within six months. This is to be known as "the common time"; and furthermore, another kind (of time) will be told (19).

When the sun is in "the even seventh" (samasapta), and the moon⁴ comes into existence, then, the time is named pausna ("that which belongs to Pusan"), as it is the time when death is determined (20). The seventh sign of the zodiac after the sign in which a man has been born is called samasapta; and the sun in it is (called) samasaptaga (21). In every case "the perpetual goer" (the wind) reaches the end of the course of the sun; a man of good intellect should incessantly observe the time every moment (22). When at the moment of the limit (velā) there is a different movement of the wind, after the completion of this moment, there

4

tib. gañ tshe skye bahi ñin zla ba = janmarkacandramā yadā (= MS I)?

will be death; there is no doubt about this (23). At first, accomplishing (the duration of) a full half day or a day up to a day and night, then, two days, three days and extending as far as four days, that which is the breath of life (prāṇa), depending on the veins, circulates on the right side when the sun is rising. From this, it should be known that the direction of the earth and the sun indicate six-times-four good omens (24).

Quintupling five, there occur twenty-five paths of days (divasagati). Then, increasing one by one, they reach to thirty-three. Those which are all the "three-eyed moons" (trinayanaśāśin) and six "moons of three pairs" (triyugmendu), and "two-moons" (dvīndu) multiplied by lunar days ("fifteen"), directions ("ten") and arrows ("five"), in the time pausna, they indicate the remaining months and days of life (25).

Describing three concentric circles equipped with thirty-seven chequers, a man should write in the days of life and the wind of the breath of life, according to the order of the cipher (26). Now will be told the purification of those days in the intermediate spaces between the fifth day and the twenty-fifth, which are numbered sixteen and have not been told (before) (27).

If the wind blows in due order for six or seven or eight or nine days, (he will die) within three years less twice twenty-four days (28). (If the wind blows) in due succession for days named Rudra ("eleven") or Arka ("twelve") or Kāma ("thirteen") or Manu ("fourteen"), (he will die) within two years less twice twenty-four days (29). And likewise, if the wind blows for sixteen or seventeen or eighteen or nineteen days according to the order of days (30), he, when no remedy is applied, will visit the house of Yama within one year less twice the Arka ("twelve") days; there is no doubt about this (31). (If the wind blows) regularly for twenty-one or twenty-two or twenty-three or twenty-four days, he will die within six months less twice six days (32).

Describing two concentric circles equipped with thirty-two chequers, he should write in numbers of (the wind of) life and the wind of limbs there according to the order of the cipher (33). If he desires the abode of eternity, knowing completely all those omens of death, he will be able to deceive Death according to the ritual (34).

A yogin should at first purify the veins; he should purify the wind, making (the veins) repeatedly empty one by one in due order (35).

Closing the entrance of the vein and drawing (the wind) to the left, he should make (the right vein) empty, and in the same manner, drawing the wind to the right, he should empty (the left vein) slowly (36). Twenty-one thousand and six hundred is the number of breathings of people in one day and night (37).

Through (the wind) relating to (the mandala of) fire (the south-east), there will be death; and through (the wind) relating to (the mandala of) wind (the north-west), the property will be lost.⁵ Through (the wind) relating to (the mandala⁶ of) earth (the east), there will be kingship; through (the wind) relating to (the mandala of) water (the west), wealth will arise (38). The wind circulating in (the mandala of) fire (the south-east) brings about hunger, thirst,⁷ fatigue, illness, pain and the destruction of all undertakings. This is said by the highest "holder of diamond" (vajradhrt) (39). In (the mandala of) wind, (the wind) effects quarrel, regret, confusion, affliction and loss of wealth; (the wind) in (the mandala of) earth causes the gain of money, grain and so on fully and quickly⁸ (40). The wind circulating in (the mandala of) water is considered to be the cause of every (kind of) fulfilment (siddhi). The best yoga of it is the most excellent, as is said by Vajrasattva (41).

5

tib. and the version used by Ratnaraksita omit this line; this is also omitted in MSS IL.

6

Pañj. 'Then, the manner in which the practiser of the yoga of the wind accomplishes the acts of pacifying (calamity) and so on is mentioned by the passage "Through (the wind) relating to (the mandala of) earth etc.". Through (the yoga) practised in the mandala of earth, the acts of increasing welfare and so on are (accomplished)'.

7

Pañj. "'hunger, thirst (etc.)" means that when the wind circulates in the mandala of fire, the fierce acts are accomplished'.

8

For -sadya- (= -sadyah-), tib. Pañj. MSS IL -saṅga-. Pañj. rñed pa shes pa rdsas kyi rñed pa laho // de thob pa rab tu thob pa ste drug pahi don la dañ poho // sdud byed hgroho shes pa lhag maho // 'labha means gaining of property. apta is prapta, and is (to be interpreted) as a nominative in the meaning of the genitive case. saṅgakaraka is the remainder (of this compound word)'. According to this, the line should be translated as follows: '(the wind) in (the mandala of) earth causes gain of money, grain and so on, and accumulation of that which has been obtained'.

The reverend Lord Heruka whose nature is the wind is of three kinds; the wind circulates on the left in the nature of prajñā-wisdom, and on the right in the nature of compassion (karuṇā) (42), and moreover, it circulates at both sides through the inseparable union of both. From this, a man who knows the truth should know good and evil and so on there (43). He will be praised as consisting of prajñā in regard to the removing of poison and so on without remainder⁹, in regard to bliss and the arising of good fortune; he is always equipped with auspiciousness and the power of compassion (44). He is praised as consisting of compassion in regard to fighting, sexual pleasure, gambling and eating, and as regards the acts of cutting and cleaving, burning and boiling (45). Moreover, the vajrin, possessing (these) two natures, will cause uncertainty, and in this respect, a man who knows the wind should observe good, evil and uncertainty (46).

If a man who is abiding in kāli should ask, while the Lord is circulating in ālī, or if he should stay in the region of ālī when the Lord goes to kāli, he will lose his esteemed possessions (47). But, if a man who stays in the same region as the Lord should ask, he will obtain everything. If he abides in both, there will be doubt (48).

The three bodies of the Lord whose nature is the wind should be known (as follows): the wind entering in should be dharmakāya (the body of dharma); the wind staying should be sambhogakāya (the body of enjoyment) and the wind going out should be nirmāṇakāya (the body incarnate). Those are considered to be the three bodies (49). In the body of dharma, there exists good fortune for the inquirer and for himself; in the body of enjoyment, doubt, and in the body incarnate there exists beatitude (50).

The yogin abiding in "the breath-exercises" (prāṇāyāma) proceeds in the left and right places in due order because he is possessed of the five buddhas (51). The ray of light issuing from the right carries¹⁰ the mandala of fire (which is) of the shape of a saffron-flower; the deity there is Amitābha (52). The ray of light

9

tib. accords with MSS AL śeṣe; this does not make good sense. In this case, the fact that avagraha is quite commonly omitted in MSS is to be taken into account.

10

tib. ignores vaheṭ; 'The ray of light issuing from the right is nothing but the mandala of fire'.

issuing from the left should always be the mandala of wind. It is of greenish colour; and the supreme deity there is Amoghasiddhi (53). The ray of light issuing from both is like the splendour of gold; it is the mandala of earth, (in which) the wind (that is,) Ratnasambhava circulates at all times¹¹ (54). The motionless¹² or slowly circulating (ray of light), which resembles the white kunda-flower or the moon, carries the mandala of water; (the deity there is) Vajranātha who has great lustre (55). The wind going through the whole body produces all the activities; its nature being Vairocana, it is called the great wind (56).¹³

The yogin abiding in the concentration of mind should number the wind entering in. He should always recite voicelessly as much as one hundred thousand times (57). When the voiceless recitation of one hundred thousand times is completed, the practiser will have five years to live, even if his life has already come to an end; there is no doubt about it (58).

He should always stand up early in the morning and count the breathings one thousand times; thereby, he will always abide in the concentration of mind through the yoga of the wind (59). Also, he who knows ātman, by filling (the body) completely with wind all the way to the soles of the feet, always defeats Death through the yoga of jar (60).

When a jar has been placed firmly, the act of striking it is threefold: the inferior is (breaking it in) thirty-six (pieces); the medium will be (breaking it) into twice as many (pieces). The superior is to be known as (breaking it) into three times as many (pieces). Thus, the jar is broken (61). Setting the jar at his knees before himself, touching it three times with the hand, then, he should snap his fingers six times (at it) (62). One must strike the jar from (the inferior striking which is) breaking the jar into

11

MS A devatā makes good sense. See Pañcakrama II, 19.

12

tib. hog nas, Pañj. hog ma suggest adho '(The ray of light which) circulates slowly downwards ...'. This adho accords with Pañcakrama II, 22.

13

These five verses are identical with II, 19, 20, 21, 22 and 22 of Pañcakrama, though there are some differences in details.

thirty-six (pieces) until the superior striking (breaking it) into one hundred and eight pieces (that is,) three times as much (as the inferior) (63). It should be broken with effort by him who desires the abode of eternity. The god of death will be far away from him who has practised the yoga of breaking the jar (64). The god of death does not go near to him who, knowing the jar and making it firm, abides with suppression even after one thousand kalpas (65).

A man who has concentrated his mind, and would meditate that the wind existing in the lotus-flower of the heart is like the white character Hum, that man will not be oppressed by the objects of senses (viṣaya) and so on (66). The wind is going upwards in transmigration; and it will go downwards in Nirvāṇa. (The wind) abiding in the lotus-flower of the heart is the Nirvāṇa without fixation (apratisthitānirvāṇa) (67). Uniting the ascending and descending winds in the form of sāṃputa (two bowls joined) in mind, he will attain the abode of eternity through the yoga of practising it (68).

A man who does not know the yoga of the wind or who, though knowing it, does not practise it, will be an insect afflicted by the various miseries of transmigration (69). And, a man who observes the wind coming or going is a man with good understanding.

Everything is presided by the wind; the wind is omnipresent (70).'

Chapter five: explanation of the course of the moon and the sun.

CHAPTER VI. EXPLANATION OF THE FIVE WAYS.

'Furthermore, I will explain the five ways decidedly.

The yogin having accomplished his own benefit and that of others examines good and evil (1). A man of good intellect should observe the passage of mandala, in (the mandalas of) fire, wind, earth and water (2), (which realizes the rite of) pacifying (sānti), increasing welfare (pusti), subduing (vaśa) and attracting (ākṛsti), and likewise, (the rites of) killing through cursing (māraṇa) and expelling (uccatana). If he does not know the yoga of it, his exertion will be vain¹ (3).

By (the mandala of) fire, there will be death; and by (the mandala of) wind, property will be lost; (the mandala of) earth will bring about kingship; and (the mandala of) water will grant wealth (4).

The humour (dhātu) flowing from the right is the mandala of fire; this (mandala) is of red colour and distinct, and it will pass to Padmanātha (5). And, the humour flowing from the left has come forth as the mandala of wind. Having the appearance of yellowish or greenish colour, it will pass to Karmanātha (6). The humour flowing from two opposite sides, resembling the colour of gold, is at the same time the mandala of earth; and it will pass to Ratnanātha (7). The humour immovable or flowing slowly is the mandala of water; it, having the appearance of clear crystal, will pass to Vajranātha (8).² Extracting all the humours through those which possess the recipient and its content, the great wind which belongs to Vairocana will go forth from the dead body³ (9).

If a man does not know the truth of the wind, he will not fulfil deeds to be done and not to be done. Dialecticians do not understand it.⁴ The wind will be omnipresent (10). Following the truth of the

¹

With regard to this expression, see the third pāda of Pañcakrama IV, 11.

²

These four verses are to be compared with II, 19, 20, 21 and 22 of Pañcakrama; the wording of the Pañcakrama is very similar to that of these verses.

³

This line resembles the second line of Pañcakrama II, 23.

⁴

This pāda resembles the third pāda of Pañcakrama II, 23.

wind, the truth of mantra should be fulfilled.⁵ That which is the breath of life of living beings is said to be the wind; it effects all the deeds⁶ (11). And, it is the chariot of consciousness (viññana)⁷; (by it) a man will attain the abode of the buddha-nature. It is the secret of all the tantras; and is the means (upaya), as it is the cause of enlightenment (bodhi) (12).'

Chapter six: explanation of the five ways.

5

This line resembles the first line of Pañcakrama II, 4.

6

This line is identical with the first line of Pañcakrama II, 3.

7

This pada should be identical with the third pada of Pañcakrama II, 3.

CHAPTER VII. THE MEANS OF THE PROCESS OF VEINS AND PLEXUS.

'Now, I will explain the veins and plexus (cakra) in due order.

Veins circulating in the body are seventy-two thousand (1).

Veins rely on the abodes of those subsidiary veins. One hundred and twenty (veins) are said to be the principal veins (2). The abodes of veins (that is,) "the seats" (pīṭha) are twenty-four in number; in the middle of them dwell three veins; they are omnipresent (3).

In Pullīramalaya¹ (that is,) the head exists (a vein) flowing through fingernails and teeth. In the abode of the top of the head (that is,) Jalandhara, there exists (a vein which) flows through the hair of the head and body (4). In Oḍiyāna (that is,) the right ear, a vein flows through the skin and dirt; and in Arbuda (that is,) the back-bone², a vein flows through the flesh (5). In Godāvarī

1

These enumerations of names of countries, parts of the body, humors or intestines and their correspondences furnish important internal evidence as to the relations between tantras of the Saṃvara literature. In the Abhidhanottara, twenty-four countries, twenty-four parts of the body, twenty-four humors or intestines, twenty-four gods such as Khaṇḍakapāla and so on and twenty-four goddesses such as Pracandā and so on are repeatedly enumerated. A certain country always corresponds to a certain part of the body, a certain humor or intestine, a certain god and a certain goddess; for example, correspondence of Pullīramalaya, the head, fingernails and teeth, Khaṇḍakapāla and Pracandā is always fixed. Enumerations and correspondences of countries, parts of the body and humors or intestines of this chapter of the Saṃvarodaya are known to accord with those of the Abhidhanottara in which we find the following enumerations and correspondences: countries - gods - goddesses (chs. 4, 5, 6, 10, 11, 13 and 14); initials of countries - parts of the body - gods - goddesses (- places of pilgrimage) (ch. 9); countries - goddesses (ch. 12); humors or intestines - goddesses (ch. 12); countries - parts of the body - goddesses (ch. 12); countries - parts of the body - goddesses (- places of pilgrimage) (ch. 14). In the Yoginīsaṃcārya, the following enumerations and correspondences occur: humors or intestines - gods (ch. 4); initials of countries - countries - goddesses (- places of pilgrimage) (ch. 5); countries - parts of the body (- places of pilgrimage) (ch. 13); countries - goddesses (ch. 17). The systems of these three tantras accord with each other.

2

The dictionary gives for prsthavaṃsa the meaning 'the back-born', but tib. mgo rgyab means 'the back of the head'. For the corresponding part of the body, Skt. MSS belonging to the University of Tokyo (Nos. 173 and 474) have prsthavaṃsa (chs. 6 and 9 of No. 173 and chs. 9 and 12 of No. 474) and mastakaprsthā (ch. 11 of No. 173 and ch. 13 of No. 474); tib. always give spyi bohi rgyab 'the back of the head' chs. 9, 12 and 14). From the context, the translation 'the back of the head' is preferable to 'the back-bone'. The Yoginīsaṃcārya gives rgyab tshogs (ch. 13).

(that is,) the left ear, a vein flows through the muscle. Among the two eyebrows (that is,) Rāmeśvara, (a vein) always flows through bones (6). A vein existing in Devīkoṭa (that is,) the eyes flows through the kidney.³ In Mālava (that is,) the abode of both shoulders⁴ is the vein flowing through the heart (7). In the abode of Kāmaru (that is,) the two armpits, (a vein) always flows through the eyes. In Odra (that is,) the two breasts a vein always conveys bile (8). In the navel (that is,) the abode of Triśakuni, a vein flows through the lungs. In Kośara (that is,) the top of the nose exists a vein flowing through the wreath of entrails (9). In the abode of the face (that is,) Kaliṅga, always exists (a vein) moving in the rectum. In Lāmpaka, that is the abode of the throat, the vein is always flowing through the stomach (10). In Kānci, the abode of the heart, a vein conveys faeces.⁵ In Himālaya, the abode of penis⁶, a vein goes to the middle of the parting of the hair (11). The vein existing in Preta (-puri) (that is,) the liṅga conveys phlegm. In the abode of the rectum (that is,) Grhadevatā is (a vein) always conveying purulent matter (12). In Saurāstra (that is,) the both thighs a vein always conveys blood. In Suvarṇadvīpa (that is,) the abode of the shank⁷, a vein conveys sweat⁸ (13). In Nagara (that is,) the toe,

3

To bukka, the dictionary gives the meaning 'heart'; tib. mchin pa means 'the liver'. The corresponding word in chs. 12 and 14 of the Abhidhānottara is mkhal ma 'the kidney'; Skt. MSS always have bukka (chs. 9 and 11 of No. 173 and chs. 12 and 13 of No. 474). The Yoginīsaṃcārya has mkhal ma (ch. 4).

4

tib. dpuñ pa 'the arm'; ch. 9 of the Abhidhānottara, dpuñ rtse 'the root of the arm' and its Skt. MSS, bāhumūla; chs. 12 and 14 of the Abhidhānottara, phrag pa 'the shoulder' and Skt. MSS, skandha; ch. 13 of the Yoginīsaṃcārya, dpuñ ngo.

5

tib. bsaṅ ba 'faeces'; chs. 12 and 14 of the Abhidhānottara give lgañ ba 'the bladder'; Skt. MSS (ch. 11 of No. 173 omits) give purīṣa 'faeces'; ch. 4 of the Yoginīsaṃcārya, bsaṅ ba.

6

tib. hdoms pa (= hdoms?) 'the pudenda'? Ch. 9 of the Abhidhānottara, bsaṅ sgo 'the gate of faeces'; chs. 12 and 14, hdoms; Skt. MSS always give medha; ch. 13 of the Yoginīsaṃcārya gives mtshan rtse 'the top of the penis'.

7

Chs. 9 and 14 of the Abhidhānottara, byin pa 'the shank'; ch. 12, rje nar 'the shank'; Skt. MSS jaṅgha; ch. 13 of the Yoginīsaṃcārya, brla 'the thigh'.

8

tib., chs. 12 and 14 of the Abhidhānottara and ch. 4 of the Yoginīsaṃcārya give rdul 'the menstrual fluid'. Skt. MSS of the Abhidhānottara always give prasveda.

a vein is known to be always conveying fat. In Sindhu, the abode of the instep, (the vein) Rūpinī conveys tears (14). In Maru (-deśa), the abode of both thumbs, a vein conveys saliva at all times. Existing in Kulata (that is,) the two knees, (a vein) always⁹ conveys snivel (15).

The vein existing in the middle of them is Lalana; and it conveys urine. On the right is the vein called Rasana; and it conveys blood (16). (The vein) which exists in the middle region, goes through the middle of the lotus-flower of the heart, has the appearance of the flower of the plantain tree, hangs down and faces downwards (17), blazes like the fire of oil and brings about the bodhi-mind, it is to be recognized as Avadhūti; it grants the innate joy (sahajānanda). These veins such as Lalana and so on are the principal veins (18).

For this reason, (they are) the dwelling of other (veins), (just as) Gaṅga and Sindhu are (the dwellings of) other rivers. They alone are the veins in the female organ (yonī); they have become one, and have the face of a bird (19).

They who possess the form of the body of enjoyment (sambhogakāya) should be known as relying on the body. And, the three predominant (veins) of women are veins (such as) Lalana and so on (20). Lalana has the nature of prajñā-wisdom; and Rasana exists as means (upāya). Avadhūti is in the middle place, and is free from the objective and the subjective (21). Lalana is the body of enjoyment; Rasana is the body incarnate; and Avadhūti is the body of dharma itself; thus, they are considered to be the three bodies (of the buddha) (22). All those veins make the body beautiful.

9

It is difficult to find the meaning of tib. rtag tu in readings of Skt. MSS. varam = occasionally ?

The collection arisen from them¹⁰ is "the lump" (pinda) (which is) of the nature of deity¹¹ (23). Pinda is beyond material form¹²; and that which is beyond pinda is the deity. Therefore, it has, in an unthinkable way, the essence of tathata ("suchness", the true state of things) and is omnipresent (24). In the same way in which the yogin is in the state beyond pinda, he has become of its nature and obtains the state of a buddha (buddhatva) (25).'

Chapter seven: the means of the process of veins and plexus.

10

Pañj. "from it" (tasyāḥ) means "from them" (tābhyah)'.

11

Pañj. tshogs kyi goñ bu lhahi gzugs su yañ dag par skyes pa spyi bo la sogs pañi gnas kyi rtsa rnam kho nahi tshogs te / rim pa ji lta bar gtum ma la sogs pañi lha mo rnam so // "the collection", (that is,) "the lump" is that which has become manifested in the form of figures of deities. This is a collection of only the veins of abodes such as the top of the head and so on, and (at the same time) goddesses in due order such as Pracandā and so on'.

12

The same expression gzugs las hda pa occurs in ch. 12 of the Yoginīsaṃcārya (Vol. 2, 240-3-7); but the context is different.

CHAPTER VIII. THE RITUAL OF SAMAYAS AND GESTURES.

'Then, I shall explain samayas in due order; by merely knowing them a man can quickly attain fulfilment (siddhi) (1).

In his own house or in a secret place, in deserted places or in pleasant places, in mountain, cave, or thicket, on the shore of the ocean (2), in a graveyard, in a shrine of the mother-goddess or in the middle of the confluence of rivers¹, a man who wishes the highest result should cause the mandala to turn² correctly (3). The great, faithful donor should invite yoginī and yogin, the teacher (ācārya), (deities) born from kṣetra, mantra and pīṭha, and all the deities (4).

For a layman or a novice, (even) a mendicant (of exoteric sects) can be the ācārya. Whosoever is the mendicant being established in the mundane teaching he is the ācārya. Whosoever is endowed with the action of a virtuous man or whosoever has obtained supernatural faculties (he is the ācārya) (5). Making the best and the most excellent of those people the ācārya (that is,) the leader, the faithful donor should cause the good mandala to turn (6).

The ācārya who has already been consecrated, who is virtuous³ and not blamed by (secular) people and who has completely abandoned the ten evils should be made the leader of the assembly (ganaṇāyaka) (7).

A man who is pitiless, inclined to wrath, cruel and arrogant, greedy, without self-control and boastful, he should not be made (the ācārya); the donor should always be wise (in this matter) (8).

A man who is a householder or a brāhmaṇa observing the vow of chastity (naiṣṭhika)⁴, a ruler, a servant, a "plough-holder"

1

With regard to the place where the mandala is to be constructed, see ch. 1 of the Laghusaṃvara (Vol. 2, 26-2-3 f.).

2

varṭayed actually means 'should construct' or 'should write'. tib. bri bar bya 'should write'.

3

If gunino is to be taken as gen. sg. of gunin, it must mean 'who is not blamed by the virtuous (people) and secular people'; but this is less likely. tib. yon tan ldan shows that the Tibetan translator took this word as nom. pl. with singular meaning and as a modifier of ācāryo.

4

Whether or not tib. khyim gnas corresponds to grhī and naiṣṭhiko is not clear.

(laṅgalin) or a merchant, who foolishly sells the right teaching, he should not be the leader of the assembly of the circle (9).

Thus, he who is equipped with all the merits, who holds the banner of the omniscient, and possesses firmness⁵ and energy and is without covetousness and self-conceit (10), he who is always considerate of living beings, blissful⁶, and adorned with ornaments, who has entered into the concentration of mind through (the yoga of) a vajra and a bell, he who is fond of the ornament of a human skull (11), the man of good discernment should cause "the left woman" (vāmā) to stand at his left side. Thus, the ācārya fully equipped with merits is praised in all actions (12).

Then the ācārya and the deities are invited and have arrived, a man should purify them by washing their feet with perfumed water such as has been obtained (13), and he should cause them to enter the area marked out (beforehand), and to sit on the seats, according to the division between elder and younger with the ācārya in front (14).

A man who is a wretch⁷, who is full of self-conceit, or who violates his teacher's bed, one not yet consecrated (even if he were his) own son, a servant female or a male, should not be introduced into the samaya (the sacrament) (by which) a practiser (sādhaka) wishes (to attain) fulfilment (siddhi) (15). If he were to introduce any cattle⁸ belonging to those people (into the samaya) the siddhi will be far away from him; it will harm the samaya and will cause physical and mental affliction (16). He will lose his position and will be far removed from splendour; he will be afflicted by various kinds of sufferings. Knowing this, he should

5

dhīrya (MSS BCIDP and perhaps E) also makes good sense 'possesses intelligence and energy'; tib. dul does not necessarily agree with dhairya (MS A). dhīrya might well be translated by dul.

6

tib. ltos bcas should correspond to apekṣako; and consequently, tib. bsten pa (āśraya?) should correspond to śreyasī. However, Pañj. gives ltos pa bcas as translation for apekṣako and legs so as translation for śreyasī.

7

durduraś is not clear; tib. skal ba med 'a man who is without good fortune' or 'a man who is a wretch'.

8

Omission of paśu (MSS IDEL), which is not original, can make sense 'If those people were to be introduced (into samaya)'.

exclude these people; he should include only people who deserve worship⁹ (17).

According to the division between elder and younger, he should always worship according to the ritual with flowers, incense, lamps, perfume, and especially (the perfume of) sandalwood (18). The acārya¹⁰ arranging the oblation decorated with banners and canopies, should offer (it) in order to propitiate deities.

(Then,) as is wished by the donor (19), he should request (the rites of) pacifying (śānti) or (of) increasing welfare (pustī) according to actions. He should carry out action as is demanded by (the nature of) the action (20). The karmavajrin (a man performing diamond-like action), who is pure, of tranquil mind, clever, free from greed and folly, and who looks equally upon all, he should prepare spirituous liquor made from honey, molasses and grain as they were obtained and brought together, also food, drink and rice-gruel, betel and likewise a donation (21, 22).

The karmavajrin, the wise, should at first let the donor open the mandala; then, he should cause (him) to hand round the objects (23). (The donor should) at first hand round the samaya (ritual food) which is connected with a hook, and then, he should let the acārya consecrate it when it is entirely completed (24).

The goddesses abiding in (the places of pilgrimage such as) pītha, upapītha, kṣetra, mela, śmaśāna (and so on) are altogether the heroic female lords who hold sway over (all) the heroes. With devotion, I salute(them) (25).

Goddesses are authority; samaya is authority; and the words told by them are the highest authority. By this truth, these goddesses cause benefits to be conferred upon me (26).

Having placed the donor in front and the mandala before him, the venerated (acārya) should swear an oath, joining the flats of the hands and keeping them on his heart (as follows)(27):

O goddesses! who have broken off attachments (thinking that) worldly existence and its cessation are the same, you who have

9

'Thus knowing that these people are to be avoided, he should get together everything that pertains to worship'?

10

acāryabaliṃ (MSS BCDE) 'Arranging the oblation for the acārya', is contradictory to devatārādhya (= devatārādhaya). tib. and Pañj. slob dpon gyis suggests acāryo baliṃ.

destroyed all imaginary construction, who regard all objects in nature as similar to the sky, you, the fluid of whose heart is filled with the very heavy water of compassion, take! O goddesses! take compassion on me beyond all measure (28)!¹¹

To the best master, whose mind has been purified by drink of the same taste as the amṛta of yoga, whose body has been purified by going to places such as pīṭha and so on, to him who is the lord of the circle of the highest mandala in the middle of the auspicious pīṭha, I make a respectful salutation with bowed head (29).¹²

[To that Vajravārāhī in whose tantra the great word beginning with "then" will reach fulfilment, to the female leader of Cakrasaṃvara, I make a respectful salutation 30').]

To the goddess, whose jewel-like body is adorned with a necklace of goddesses, whose limbs are all always shining with heroes, to her who is the female lord abiding in the circle and is innately free from impurity, who is the essence of the yoga of Samvara, I make a respectful salutation (30).

To him who is in the pure abode of the formal essence of the character E, in the excellent womb of a lotus-flower, in its very centre, to him who is as white as the best goose or a kunda-flower, whose nature is fully developed, the omniscient, the immaculate habitation of the buddha, to the beauteous dwelling of goddesses, to the pleasure which is innately free from impurity, to the origin of sahaja ("the innate"), to the leader (nāyaka), I make a respectful salutation (31).¹³

[I, who am the Vajradāka of the auspicious Cakrasaṃvara (that is,) the excellent saṃvara, the presiding lord of the assembly of

11

This verse 28 is to be considered as pertaining to the swearing of an oath, and verses 29, 30 and 31 are the "three verses" mentioned in verse 32. Consequently, tib. which omits verses 30', 32', 33', 34', 35', 36' and 37' shows the most acceptable form. The version of Ratnarakṣita, in which quotations from verses 30' and 33' are found, shows traces of interpolation.

12

Verses 29, 30', 30 and 31 are quoted perhaps directly from the Samvarodaya, at the beginning of the dPal hkhor lo bde mchog hbyun bāhi dkyil hkhor cho ga, No. 2249, Vol. 52, 164-3-7 f. These verses can also be found in Bu ston's Sādhana, JA 470-2 f.

13

The first half of this verse is omitted in tib.; it must have been, by accident, omitted in the version used by the Tibetan translator.

the heroic, female lords and the best heroes, who am embraced by the graceful arms of the goddess with the face of a pig, will bow to your lotus-like feet full of compassion (32').]¹⁴

Salutation to the auspicious Vajradāka, the universal king of dākinīs, who possesses the three bodies and the five wisdoms, and is the recourse of the world (33'). Salutation at all times to all vajradākinīs, whose bond of imaginary construction is cut off, and who exist in the form of the world (34'). O Śrīheruka! Great hero! Pure One! O lord of lightening! ...¹⁵ Vajravārāhī is (the woman) impassioned by the great passion (35'). O you who have not produced imaginary ideas! Whose mind is not fixed! O you who are without remembrance and attention! Who are without support! Salutation to you (36')! To the goddess endowed with the most excellent body free from origination and extinction, the goddess of victory with rays of light of red colour, who possesses the form of the three worlds, whose limbs are completely adorned with the multitude of merits of auspicious yoginīs, to her, I make a respectful salutation. The mother of jinas (the victors) will always say "as you please" (37').

Praising with (these) three verses, he should salute as he pleases. He should at will cause him to dance, him, who has a joyous mind, who has the great joy of kilikilā (32), who is honoured with various kinds of flowers, whose body is adorned with garlands of flowers, who delights in drinking festivals, who sings vajra-songs and is satisfied (33), who has the highest joy. He should cause him to dance through finger-postures (mudrā) and mantras, in the posture marked by pītha, a dance to the music of damaru-drums together with pataha-drums (34), accompanied by the sound of dhakka-drums, huḍukka-drums and so on, and various pleasing musical instruments.

The hero equal to Śrīheruka is (to the right) and the best yoginī is to the left (35). Then, the yogin and the yoginī, meeting together, should instantly give a benediction to the superintendent of the assembly, the donor, good in thought (36). He will be possessed of the perfection of pleasure, free from

14

This verse seems to be a recent interpolation, because in Bu ston's Sādhana, verses 33', 34', 35', 36' and 37' directly succeed verse 31.

15

The word naumitaṃ is hitherto incomprehensible.

disease, righteous in mind, and will attain the liberation from love-passion (kāma). There will be fulfilment (siddhi) for him who has completion (37).

Drawing together the aspects of the maṇḍala spread as it is told in the ritual, collecting the remnants of the oblation, he should give it to bhūta-ghosts and Ucchuṣma¹⁶ (38).

Goddesses abiding in pīṭha and kṣetra feeling strong pity for me, ... he should ask the gratified assembly of yoginīs; and he should go to the great pleasure of all the heroes who have arrived (39).'

Chapter eight: the ritual of samayas and gestures.

16

With regard to Ucchuṣma, see Sādhana-mālā: edited by B. Bhattacharya, G.O.S. xxvi and xli, p.410; B. Bhattacharya: The Indian Buddhist Iconography, Calcutta, 1958, p. 239.

A quotation from a work entitled Ucchuṣma-tantra can be found in the Advayavajrasaṃgraha, edited by H.P. Shastri, G.O.S., xc, p.28.

CHAPTER IX. EXPLANATION OF THE SECRET SIGNS AND THE STAGES
(OF BODHISATTVAS) PRECONCERTED TO BE PĪTHA (AND SO ON).

'Now, I will explain briefly the signs¹ of the left hand, by knowing which a yogin quickly attains fulfilment (siddhi) (1).

²If a man who shows one finger (will be answered) by (showing) two fingers, (it means that) he is very welcome. If the thumb of the left hand is pressed, it should be known as the sign of safety (kṣemamudrā) (2). To him who shows the ring-finger, the little finger should be shown. To him who shows the middle finger, the forefinger should be shown (3). To him who shows the ring-finger, the neck should be shown. To him who shows (the sign of) patisa-spear³, (the sign of) a trident (triśūla) should be shown (4). To him who shows the breast, the parting of the hair should be shown. To him who shows the earth, (the sign of) a circle (cakra) should be shown (5). To him who shows a frown, the crest of hair should be shown. If he indicates the forehead, (she should) dance with a playing-ball (kanduka) (6).⁴ The woman who always goes on the left (or who comes) from the left is a dākinī. The woman who speaks by (the sign of) the left hand, or the woman who sees by looking to the left (is a dākinī) (7).

1

The theme of chomā (chomaka, in this verse) occurs in chs. 20, 21 and 22 of the Laghusaṃvara, which correspond to chs. 42, 43 and 44 of the Abhidhanottara respectively. Contrary to expectation, chomās mentioned in this chapter of the Saṃvarodaya accord, in details, with those which are mentioned in ch. 7 of the first kalpa of the Hevajra, but not with those mentioned in the Laghusaṃvara and the Abhidhanottara. The framework of this chapter of the Saṃvarodaya also resembles to that of ch. 7 of the first kalpa of the Hevajra.

2

Verses 2, 3, 4 and 5 accord with verses 2, 3, 4 and 5 of ch. 7 of the first kalpa of the Hevajra.

3

patisa should correspond to ba tihi so, ba tihi sa (chs. 20 and 22 of the Laghusaṃvara respectively), and ba ti sa and pa ni sa (chs. 42 and 44 of the Abhidhanottara respectively); the Skt. MSS of the Abhidhanottara belonging to the University of Tokyo have yattisa (pattisa?) (No. 173, ch. 39, 142a-6) and kattisa (No. 474, ch. 41, 167b-2) for ba ti sa (tib. ch. 42), and mahi (No. 173, ch. 41, 143b-5) and mahi (No. 474, ch. 43, 169a-5) for pa ni sa (tib. ch. 44).

4

The first and the third pāda of this verse accord with those of Hevajra I, 7, 6.

He who speaks joyfully to women is considered to be a consecrated person (samayin). If he solicits a woman, he tells (it) with seed-characters of the family (8). He does not give up the religious ceremony of the family; he recites the magical spell (vidyā) of his own family; and he always writes the magical spell. He should scratch his own head with the left hand; and he can remember his own vidyā, (and) he will be suitable for the object of a practiser (9).

Putting the finger on the cheek, on the throat or on the nose, he should always with an oblique glance look at his own vidyā (the feminine partner); yoginīs who possess the consecration (samayinī) and who are difficult to be found go to the "real state" (10).⁵

Portraying kapāla-vessels, hatchets, swords, banners and discuses (cakra), chowries, vajras⁶, conch-shells and tridents, (a yoginī) should enjoy herself in her own house (11).

A woman who is always fond of meat and spirituous liquors and forgets shame and fear is said to be an "innate woman" (sahajā) born of the dākinī family. They are born in each district; (those) yoginīs should be worshipped at all times (12).

(The places of pilgrimage⁷, that is,) pīṭha ("the seat"), upapīṭha ("the subsidiary seat"), kṣetra ("the field"), upakṣetra ("the subsidiary field"), chandoha, upacchandoha, melāpaka ("the meeting-place"), upamelāpaka ("the subsidiary meeting-place"), śmaśāna ("the graveyard") and upaśmaśāna ("the subsidiary graveyard") are located in Jambudvīpa (13).

5

A passage identical with these four verses (7, 8, 9 and 10) occurs in ch. 16 of the Laghusaṃvara (Vol. 2, 31-2-7 f.). The same passage also occurs in ch. 39 of the Abhidhānottara (Vol. 2, 75-5-4 f.), which corresponds to ch. 16 of the Laghusaṃvara, and in ch. 26 of the Herukābhyudaya (Vol. 2, 228-5-8 f.).

6

Yoginīs portray the auspicious crests of vajras, kapālas and so on in their own houses; this theme occurs also in chs. 18 and 19 of the Laghusaṃvara and corresponding chs. of the Abhidhānottara (chs. 40 and 41).

7

The Hevajra enumerates twelve places of pilgrimage (I, 7, 10); it includes pīlava and upapīlava which do not occur in the enumeration found in the Saṃvarodaya (ch. 9), the Abhidhānottara (chs. 5, 9, 14 and 56) and the Yoginisamcārya (chs. 5 and 13).

Pīṭha is said to be (located) in Purnagiri⁸; and Jālaṃdhara is a pīṭha. And likewise, Oḍiyāna is a pīṭha; and Arbuda is a pīṭha too (14). Godāvarī is an upapīṭha; and likewise, Rāmeśvarī is (one of) the two (upapīṭhas). (The places) named Devīkota and Mālava are upapīṭhas too (15). Kāmarūpa and the country named Oḍra are a couple of kṣetras. Trīśakunī is an upakṣetra, and Kośala also is an upakṣetra (16). And Kāncī is an upacchandoha and especially Himālaya is (an upacchandoha) (17). Pretādhivāsini is a melāpaka; and Gṛhadevatā is (a melāpaka) too. A pair of upamelāpakas are (located) in Saurāstra and Svarṇadvīpa (18). Pāṭaliputra is a śmaśāna; and Sindhu is a śmaśāna too. The two places of Maru (-deśa) and Kulata are said to be upaśmaśānas⁹ (19).

Thus, the external pīṭha is told; the body is said to be the internal (pīṭha). It is said that the form of veins in one's own body has the name pīṭha (20). Its form has the aspect of deities; for this reason it is established as the internal (pīṭha). For this reason, the body consists of the "lump" (pinḍa) of them¹⁰; he (who has this body) is equal to all the buddhas (21).

8

In the enumeration of countries, the first one is always Pullīramalaya in the Saṃvara literature. The name of the country of Purnagiri is to be noted because it is mentioned in Hevajra I, 7, 12 as one of the four countries of pīṭha; the other three countries of pīṭha in the Hevajra accord with those of the Saṃvara literature. This fact might suggest the influence of ch. 7 of the first kalpa of the Hevajra upon this chapter of the Saṃvarodaya. The possibility of such an influence is confirmed by the detailed agreement between the chomas mentioned in the Saṃvarodaya with those mentioned in the Hevajra.

9

With regard to the correspondence of countries and places of pilgrimage, the system of the Saṃvarodaya agrees with that of the Abhidhanottara (chs. 9 and 14) and the Yoginīsaṃcārya (chs. 5 and 13). See note 1 of chapter 7.

10

Pañj. goñ bu de rañ bshin shes pa de rnams kyis pu lli ra la sogs pa yul ñi su rtsa bshi gnas la sogs pa bcur bsdus pa rnams dañ / gnas de rnams kyis rab gtum ma la sogs pañi lha mo dañ thod pañi dum bu la sogs pañi dpañ bo rnams kyis gañ gcig tu yañ dag par bsdus pa gañ yin pa dehi rañ bshin ni rnal hbyor pañi lus so // "consists of the "lump" (pinḍa) of them"; this means that which consists of the complete collection is the body of yogin. The complete collection comprises these twenty-four countries such as Pullīra(-malaya) and so on which have been distributed to ten (places of pilgrimage) such as pīṭha and so on, (twenty-four) goddesses such as Pracanda and so on and (twenty-four) heroes such as Khaṇḍakapāla and so on (each of whom corresponds to each) of these countries'. Vol. 51, 87-5-2 f.

Pīṭha is the stage (of bodhisattvas called) Pramuditā ("joyful"); upapīṭha is (the stage) Vimalā ("immaculate"). Kṣetra is the stage Prabhākārī ("radiant"); and upakṣetra is (the stage) Arciṣmatī ("flaming") (22). Chandoha is known to be (the stage) Abhimukhī ("confronted"); upacchandoha is (the stage) Sudurjaya ("invincible"). Melāpaka is (the stage) Dūraṅgama ("far-going"); and upamelāpaka is (the stage) called Acala ("immovable") (23). And, śmaśāna is nothing but (the stage) Sādhumatī ("successful"); upaśmaśāna is (the stage) Dharmameghā ("the cloud of dharma").¹¹

I will speak of the purification of pīṭha and so on (that is,) (the ten) stages (of bodhisattvas) in due order (24). By resorting to pīṭha or upapīṭha, a man can become stainless. Wandering (amid those places) and observing (their) features, he will become wise and be free from imaginary ideas (25). He will observe the terrific laughter of the ugly (yoginī) assuming various forms. Roaring the roar of the sound Hūm in the way (yoga) of his own guardian-deity (26), the yogin will roam about like a lion, free from all fear. Fulfilment (siddhi) is produced quickly (when) he obtains seeing and touching (27).'

Chapter nine: explanation of the secret signs and the stages (of bodhisattvas) preconcerted to be pīṭha (and so on).

11

With regard to the correspondence of the ten places of pilgrimage with the ten stages of bodhisattvas, see note 45 of section IV of the Introduction.

CHAPTER X. ORIGINATION OF A MULTITUDE OF DEEDS.

'Now, I will explain the practices of the rite of pacifying and so on¹, by mere writing² of these a practiser can attain fulfilment (1).

On a day in the light half of a lunar month, he should portray with saffron (kuṅkuma) and (pounded) sandalwood (candana) mixed together a wheel having six spokes and endowed with the mantra of seven syllables (2), the outside (of this wheel) is surrounded with a string of diamonds and in the middle the name (of the sādhya for whose sake the rite is practised) is written. On a lease-cloth, on a clean scrap of cloth, or on a plate or a hemispherical bowl (3), drawing secretly a karma-vajra (cross-vajra), he should tie it with a white string. Facing the east, he should adorn it, (as it is) white-coloured, with white flowers³ (4). Seeing the sādhya (the object of the rite) abiding on the lunar disc before him, he should consecrate him with white jars filled with amṛta-water from the moon (5). He should recite the mantra of seven syllables⁴ at the three divisions of the day without hesitation; peace, success, safety and longevity will arise (for the sādhya) immediately (6).

In case of fever, swallowing poisonous beverage or food, or in the case of poisonous bites⁵, he should practise (as follows). In (the palm of) the left hand (of the sādhya⁶), he should describe

1

The practice of the various kinds of rites through using yantra ("talismán") is one of the unique points of the Saṃvarodaya. We have not been successful in finding corresponding passages in other tantras.

2

MSS AE vijñātamātreṇa, which is metrically better, makes good sense. likhitamātreṇa must actually mean 'by merely writing of (yantras of) these (rites)'.
3

tib. (= MS A?) 'Facing the east, he who is white-coloured should adorn (it) with white flowers' is not probable from the context.

4

The mantra: om hriḥ ha ha hūm hūm phaṭ is mentioned in chapter 11, which is not included in our edition, as upahṛdaya-mantra. This mantra is fully explained in ch. 12 of the Laghusaṃvara and ch. 51 of the Abhidhanottara.

5

daṃśe must not be '(in case of) poisonous food'.

6

Pañj. takes it as the palm of the left hand of the practiser himself. He cleanses the circle described in the palm of his own left hand with durva-grasses and so on in his right hand.

a circle with (pounded) sandalwood. He should worship (him) with flowers and incense (7), and (with) a strew-offering, water and fire; in the middle of this, he should cleanse⁷ (the circle) with (a bundle of) dūrva-grasses or a peacock's tail-feather, especially with (a bundle of) kuśa-grasses (soaked) with water (8). The wise (practiser) should cause the sādhya to perform while facing the east.⁸ This is the best of mantras, the most excellent. This is the process of the rite of pacifying and so on (9).

He should portray with saffron mixed with sulphur (sugandha) the wheel of increasing (welfare); having written (the mantra) on two plates, he should add the characters svāhā (to it) (10). Tying it up with a yellow string, he should throw it into clarified butter and honey. Facing the north, he should imagine it to be of yellow-colour at the three divisions of the day (11). The wise man, having seen the sādhya abiding on the yellow lunar disc, should consecrate (him) with yellow amṛta and adorn (him) with yellow flowers (12). With his thoughts (fixed on) increasing (welfare) and with a mind free from imagination, he should pronounce

Amukasya paustikaṁ kuru svāhā;

and he should add the mantra of vausaṭ! (to it) (13). (The sādhya) will have (his) money and grain increased; and he will obtain good fortune and happiness. Through the practice of this rite (karman), (the welfare of the sādhya) increases, not otherwise (14).

(The practiser) should mix the blood of the ring-finger with red candana and lac; he should describe two concentric circles on a scrap of cloth or on a leaf of birch bark (15). Having thought about (the mantra written) on a plate of unbaked clay, he should add the character Hoh (to it). Tying it up with a red string, he should adorn it with red flowers (16). Putting it in clarified butter and honey, he, facing the west,⁹ should imagine it to be of red colour; he should imagine the sādhya abiding in the middle of the red (lunar) disc to be red (17). He should recite incessantly

7

juhūyāt 'he should burn', which is suggested by MSS, is not impossible, though it is less likely from the context.

8

Pañj. takes this pūrvābhimukhaṁ as adv.; consequently, one who is facing the east is not the sādhya but the practiser himself.

9

Pañj. shows that paścimābhimukhaṁ should be taken as adv.

the mantra which consists of seven syllables and is always produced. If (the sādhya will be) made confused and fall down at his feet, (the sādhaka) should think that (the rite) is fulfilled (18). If (the sādhya) is not subjugated, (the sādhaka) should take that yantra ("talisman") out of the clarified butter and honey and burn it over (a fire of) charcoal from the khadira-tree¹⁰; (thus) he can bring fortune or misfortune on (the sādhya) whosoever he may be; not otherwise (19).

Having painted with the juice of lakṣā-grass two concentric circles on a rag (found in a) graveyard or on a rag stained with menstrual fluid, he should add the characters Jah and Hrīm (to it) (20). If he paints the circle on a plate or on (a vessel made of) a skull of a woman, he attains fulfilment. Tying it up with a red thread, he should adorn it with red flowers. Piercing the heart of the sādhya with hooks, he should tie his neck with a rope (21). He, to whom the sādhya (thus) imagined does not come at any time, should burn the yantra ("talisman") over the fire of wood from the khadira-tree as a punishment (22). The sādhya is to be drawn near by the spell Amukākarsaya hrīh jah at that very moment; this is the supreme (rite of) drawing near by the feet (23).

Furthermore, I will explain the supreme rite of paralyzing. (The practiser) should make forty-nine chequers¹¹ by crossing eight straight lines with eight straight lines (24). The wise man should empty thirteen chequers of the middle (rows horizontally and vertically), and establish (four blocks of each) nine chequers situated on each of the four corners (25). He should empty the chequers which are located in the middle with regard to all four corners; connecting the mantra of four directions (to them), he should write (them) on a rag (found in a) graveyard (26). He should paint two concentric circles with turmeric and orpiment; taking the name of the sādhya (into it), he should increase it with the

10

Also in ch. 21 of the Herukābhyudaya, señ lden me (the fire of the khadira-tree) is related to the rite of attracting (ākarsana).

11

The word 'forty-nine chequers' occurs in ch. 60 of the Abhidhanottara (Vol. 2, 87-3-2); but the context is not the same. The corresponding pāda in ch. 30 of the Laghusaṃvara, which accords with the first half of ch. 60 of the Abhidhanottara, is zlum poḥi ri mo dgu bya ste.

character Laṃ (27). He should imagine (it, the "talisman",) as being on Mt. Sumeru which has eight peaks and (contained) in plates joined in the form of saṃputa, situated in the middle of the mandala of earth above Mt. Sumeru and marked with the character Laṃ (28). Arresting¹² it with a cross-vajra (viśvavajra), he should tie it up with a yellow string. He should imagine his own body to possess the aspect of the two-armed Heruka (29). Facing the south, the yogin should imagine (it) to be yellow; he should imagine the sādhya who abides in the middle of Mt. Sumeru to be pressed down by Mt. Sumeru (30). He should imagine that, in addition to this, it is pressed down by the cross-vajra; he should make it his own abode. This is the paralyzing of the faces of the enemies. (Through this) he paralyzes the whole army and also the heart of the enemy; this is (the rite of) paralyzing (31).

Om sumbha nisumbha hūm hūm phaṭ laṃ devadattastambhaya /
 Om grhna grhna hūm hūm phaṭ laṃ devadattastambhaya /
 Om grhnāpaya grhnāpaya hūm hūm phaṭ laṃ devadattastambhaya /
 Om ānaya ho vidyārāja hūm hūm phaṭ laṃ devadattastambhaya //

And, in the same manner as before, he should describe definitely the circle; he should adorn (it) with yellow flowers; (this is) the supreme (rite of) paralyzing speech (32).

By describing always two concentric circles on a rag (found in a graveyard, he can shut the mouth (of the sādhya) with the character Vaṃ added to his name (33). Making the sādhya enter into the heart of a sheep, he should think that, in the middle of the mandala of earth, it is contained in saṃputa (two bowls joined) like a karanda-casket. He should recite the mantra incessantly, (the sādhya) will certainly become dumb (34).

Now, I will tell the rite of killing definitely. Making ink from such materials as rājika-mustard, salt, white mustard, leaves of nimba-tree, and likewise poison (35), the thorn apple, charcoal from a funeral pile or the blood of his own fore-finger, he, while facing the south (36), should describe two concentric circles with a brush made from a crow's wing. Then, taking the name of the sādhya, he should make it increase with the character Hūm (37). He should imagine (the deity) abiding in the middle of the solar disc,

¹²

tib. steñ nas mnan pa 'pressing it down'.

roaring the horrible roar of anger and in the posture of pratyālīḍha (with left foot forward and right foot drawn back), (he should imagine this deity) to be like the fire at the end of a kalpa, to be blue, horrible, with gaping mouth and projecting teeth, and his throat filled with the sound Hūm (38). From the middle of the charcoal from a graveyard, the wise man should think about the land of gravel; seeing the sādhya in places of this kind of land¹³ (39), he should regard him as dirty, clad in tattered clothes and lean. Piercing all the sādhya's limbs and the top of his head, his heart and arms with the mantra, he should reflect (40). He should cause the deities abiding in the body of the sādhya to enter into his own body. Regarding (the body of the sādhya) as an empty house, he should think about killing (41). He should send forth a multitude of wrathful (deities) having various kinds of swords and weapons in their hands. They, rending the fat, the marrow of bones, the marrow of the flesh and the flesh (of the sādhya) into small pieces, eat and drink them, and drink the blood (42). With swords, staves, clubs, axes, discuses and hammers, he should make them strike and cleave the sādhya who is being cut into a hundred pieces (43). Crows, owls, vultures, wolves, rakṣasa-demons and dākinīs eat and drink (the sādhya) with their wrath and arrogance¹⁴ (44). He who always recites the mantra increased with the characters Hūm Phat should kill a host of enemies doing ill to the three jewels (45). Ah! (Marvellous is) the rite of killing; (it) is killing, but still it is not killing. (It kills) the transmigration which is only imagination, (still it does not kill) the mind recognizing suchness (tathatā, the real state of things) (46).

In the same manner, he should describe two concentric circles; taking the name of the sādhya, he should write it connected with the mantra (47). Having seen two sādhyas riding on a horse and a buffalo, he should draw (them). Putting (the drawing) into the kapāla-vessels joined in the form of saṃputa, he should tie it up

13

tib. 'In the place which is thought to be the land of gravel or in the middle of the charcoal from a graveyard, in these places, the wise man should imagine the sādhya to stay'. This passage is still not clear.

14

tib. khros paḥi yid kyis ni 'with their wrathful mind' accords, perhaps accidentally, with MS D kruddhamānasena.

with a blue string (48). With cruel mind, at midday or especially at night, at a terrible cross-road or in the middle of an awesome graveyard (49), having dug in (the ground) and put (the yantra) to be kept secret (into the hole), he should worship it according to the ritual; those two (sādhya) fighting each other riding on a horse and a buffalo will show hostility towards each other at that moment (50). By means of the mighty one (mahātman) (the sādhaka) should cause both to be enraged with anger, to be partisan to fear and to fight. By causing strife between one person and another (in this manner) (the rite of) causing (mutual) hostility is (realized); (in this manner only) not otherwise (51).

Describing (the circles) increased with the characters Hūṃ Phat according to the same ritual and connecting the mantra to the sādhya, (the sādhaka) should write it on a rag from a graveyard (52). Putting it into the kapāla-vessels joined together in the form of saṃputa, he should tie it up with a black string. He should imagine (this yantra) which is to be buried on the site of a funeral pile to have the figure of Heruka (53). He should imagine in front the character Yam (which is), existing in the middle of (the mandala of) wind, having the shape of a bow, riding on a camel, being blue in colour and being sent to the south (54), being led away by a host of wrathful (deities) and being always¹⁵ distraught. He should incessantly recite the mantra connected with the characters Hūṃ Phat; for whomsoever the rite may be practised, it drives away (the sādhya) from that very moment (55).

The yogin, wrathful and facing the south, mixing his own blood and ashes from a funeral pile, poison, salt, white mustard and the juice of petals of the thorn-apple (56) with mustard in right proportion, should describe on a rag from a graveyard, as usual, two concentric circles in due order according to the ritual (57). In (the rite of) killing, (he should describe the circles) situated on the body of Yama; in (the rite of) causing hostility, on a buffalo and a horse; in (the rite of) expelling, (he should paint the circles) situated on the back of a camel, and in (the rite of) pacifying, the lunar disc (as the seat of the circles) (58); in (the rite of) subduing, on the hearts of women; in increasing

15

MSS suggest bhramanonmattan 'being distraught by delusion'; tib. sa steṅs smyon pa suggests bhumnonmattan as sa steṅs can be the equivalent of bhuman.

(welfare), on the back of an elephant; in making dumb, (the circles) situated on the back of a sheep; in subjugating, (the circles located) in the middle of Mt. Sumeru and in attracting, (the circles situated) on a śarabha-lion; thus he should characterize each rite (59).

Without those rites, rites may be carried out; but (in this case, the sādhaka) never attains fulfilment (siddhi). Without the teaching of the master, the rite is without result like the void (60).'

Chapter ten: origination of a multitude of deeds.

CHAPTER XIII. EXPLANATION OF ORIGINATION OF ŚRĪHERUKA.¹

'Furthermore, I will tell the origination of the mandala of deities, the agreeable, supreme secret, the abode of all the merits of fulfilment (siddhi) (1). A man of good understanding should mark out the ground which is full of all the objects of enjoyment. Possessing the yoga of the two-armed Heruka, he will have the self-consciousness of five skandhas and so on² (2). He should pronounce the four-faced mantra³ as the wall to bind the (four) quarters.

Om sumbha nisumbha hūm hūm phat, in the eastern direction,

Om grhna grhna hūm hūm phat, in the northern direction,

Om grhnapaya grhnapaya hūm hūm phat, in the western direction,

Om anaya ho vidyaraaja hūm hūm phat, in the southern direction.

He should snap his fingers⁴ in every direction to frighten evil maras (3).

He should cause to emit a wreath of beams on the character Hūm⁵ on the lotus of the heart; and through its light, he should salute in their presence his master, buddhas and so on (4). After honouring (them) with flowers, incense and so on, he should then ask forgiveness. He should take refuge with the three jewels⁶, and should make the

1

Bu ston's Sādhana gives a detailed explanation of this chapter; it contains various elements which cannot be traced in the Saṃvarodaya itself. For example, it explains thirty-two bodhyaṅgas (JA 484) or contains mantras of each goddess (JA 485); but the sources of these elements have not been studied yet.

2

Bu ston's Sādhana gives a detailed explanation of this doctrine (JA 467-5 f.).

3

This mantra is common in the Saṃvara literature. For example, it can be found in ch. 30 of the Laghusaṃvara (Vol. 2, 35-2-2 f.), ch. 4 (Vol. 2, 44-4-7 f.) and ch. 60 (Vol. 2, 87-4-7 f., 88-1-3 f.) of the Abhidhanottara. See Kṣāntiśrī's Sādhana (Vol. 52, 106-4-4 f.) and Bu ston, *ibid.* JA 469-1 f. The mantra which occurs in Pañcakrama, I, 9 is to be noted: Om sumbha nisumbha hūm grhna grhna hūm grhnapaya grhnapaya hūm anaya ho bhagavan vidyaraaja hūm phat.

4

See Bu ston, *op.cit.* JA 469-1.

5

See Bu ston, *op.cit.* JA 469-3.

6

See Bu ston, *op.cit.* JA 472-2.

bodhi-mind arise (5). Care for the welfare of others is maitrī (benevolence); karuṇā (compassion) makes the affliction of others disappear; muditā (joy) is delight in the happiness of others; and upekṣā (resignation) is indifference to other beings⁷ (6).

Om svabhāvaśuddhāḥ sarvadharmāḥ svabhāvaśuddho 'ham⁸ (Om, all the dharmas are pure by nature; I am pure by nature), thus he should think. Through the practices which bring about the accumulation of the material of bodhi (enlightenment), he should stand firm on the doctrine that everything is only mind (7).

Om śūnyatājñānavajrasvabhāvatmakō 'ham⁹ (Om, I am of the essence of the diamond-like wisdom of emptiness). He should think of bhairambha and so on in the form of the container and the content (8).

¹⁰ He should imagine the character Yam to be the mandala of wind of blue colour and in the figure of a bow, and upon it, he should imagine the character Ram, in the form of the mandala of fire (9), of red colour, three-cornered, marked by the three-pronged vajra. Upon it, he should imagine the character Vam to be the mandala of water, round and white (10), and upon it, he should imagine the character Lam, four-cornered and of yellow colour; and it is marked, in the same manner, by three-pronged vajras in the four corners of the mandala (11). Upon it, he should imagine the character Sum to be Mt. Sumeru of quadrangular shape, consisting of four kinds of jewels, agreeable and adorned with eight peaks (12).

7

The Abhidhanottara refers to these four apamānas only as bsdus paḥi dños po bshi (Vol. 2, 44-1-2); also in Bu ston's Sādhana no explanation is given of tshad med bshi (JA 742-7).

8

This mantra occurs in ch. 3 (Vol. 2, 42-3-4) and ch. 4 (Vol. 2, 44-2-6) of the Abhidhanottara. See Bu ston's Sādhana JA 473-1.

9

This mantra occurs in ch. 3 (Vol. 2, 42-3-4) and ch. 4 (Vol. 2, 45-1-1) of the Abhidhanottara, Pañcakrama, I, 44 and Guhyasamāja, edited by Bhattacharya, G.O.S. liii, p. 14. See Bu ston, op.cit. JA, 473-5.

10

The corresponding passage of verses 9, 10, 11 and 12 occurs in ch. 4 of the Abhidhanottara (Vol. 2, 45-2-1 f.). An explanation of the following six verses from verse 9 to verse 14 is to be found in Bu ston's Sādhana JA 473-6 f. For this doctrine, bTsoṅ kha pa uses a special term hbyuñ ba rim brtsegs (Vol. 157, 5-1-8, 14-3-7). It occurs, though not very clearly, in ch. 1 of the Yoginīsaṃcārya (Vol. 2, 237-5-5 f.).

Upon it, he should imagine the character Hūm to be a cross-vajra. Upon it, he should imagine a lotus flower possessed of pericarp and filament (13). In the middle of it, he should imagine yoga, that is, ālī and kālī in purity. And in the middle of it, he should imagine the character Hūm, of the nature of Vajrasattva¹¹ (14).

¹²He should imagine the auspicious Heruka situated in the midst of the solar disc. He is the hero, three-faced, six-armed and standing in the posture of ālīdha (15). His central face is deep black; his right face is like a kunda-flower; and his left face is red and very terrible, and is adorned with a crest of twisted hair (16). Treading on Bhairava and Kālarātri, he abides in the great pleasure (mahāsukha), embracing Vajravairocanī in great rejoicing of desire of compassion (17). He has attained concentration of mind through the union of a vajra and a bell, embracing (the goddess) with his (first)¹³ two arms, and holding a garment of an elephant-skin with his second two arms (18). He holds in the right hand of his third pair (of arms) a damaruka-drum to be sounded according to the nature of all the dharmas, and he has a khatvāṅga-staff and a kapāla-vessel in his third left hand (19). His crown is decorated with a wreath of skulls, and is adorned with a crescent moon. He is marked with a cross-vajra on his head and has the lord of the family¹⁴ on the top of the head (20). His face is distorted; he is very terrible and assumed the erotic -rasa. He has a tiger-skin as his garment, and is adorned with fifty human heads (21). He is the god having five mudrās, and is possessed of nine rasas of dancing.

The goddess¹⁵ embraced by him has two arms, one face and three eyes (22). She is of the colour of a bandhūka-flower, naked, and

¹¹

See Abhidhanottara, ch. 7. Vol. 2, 48-3-8.

¹²

The following seven and a half verses are explained in Bu ston, op.cit. JA 478-3 f.

¹³

This is clearly mentioned in Bu ston's Sādhana: phyag dañ po gñis kyis rdo rje dril bu hdsin pas yum la hkyud pa 'embracing the goddess with the first two arms which hold a vajra and a bell' (JA. 478-6).

¹⁴

Bu ston: rigs kyi bdag po mi bskyod pañi cod pan can 'and has the lord of the family Akṣobhya on the top of the head' (op.cit. JA 478-7).

¹⁵

A detailed explanation of this goddess is given in Bu ston, op.cit. JA 479-3 f.

with a girdle decorated by pieces (of kapāla¹⁶), with hair loosened, showing tusks, dribbling and fond of blood¹⁷ (23). In her left arm, she holds a vessel made of a human skull containing the blood of evil maras and so on. Her right hand in the tarjanī-posture holds a vajra; her big body is like the fire at the end of a kalpa. She always enjoys the great pleasure (mahāsukha) clasping (the god) tightly in her two thighs (24).

¹⁸There are Dākinī, and likewise Lāmā, Khandarohā and Rūpinī. He should put them on the places of lotus(-petals)¹⁹ (corresponding to the) four directions; pleasure of all (kinds of) siddhi will (then) appear (25). They are of black, green, red and white colour respectively; and each of them has three eyes, two arms and one face. They are kapālinīs holding khaṭvāṅga-staves in their (left) hands (26), and vajras and swords in their right (hands). They are naked and in the posture of ālīḍha, with hair loosened, with mouths showing tusks, and are adorned with five mudrās (27).

There are four receptacles of bodhicitta and so on on the (four lotus-petals of) intermediate quarters.²⁰ He should worship with a happy feast of song and dance accompanied by five amrtas (28).

²¹At the four gates there are goddesses. He should always imagine (those) deities (as follows): At the east gate, is

¹⁶

Yoginīsaṃcārya, ch. 6: thod dum brgyan paḥi sku regs can (Vol. 2, 238-5-8) and Bu ston: thod paḥi dum bus brgyan paḥi hog las (op.cit. JA 479-3) show that the girdle is decorated by pieces of kapāla.

¹⁷

Abhidhanottara, ch. 7: khrag la dgyes śiñ shal nas ḥdsag (Vol. 2, 48-5-7) and ch. 9: shal khrag ḥdsag ciñ khrag la dgah ba (Vol. 2, 50-2-7) suggest 'dribbling blood from the mouth, and fond of blood'.

¹⁸

The following three verses occur in Bu ston, op.cit. JA 479-5 f. A verse, according with verse 25, occurs in ch. 5 of the Yoginīsaṃcārya (Vol. 2, 238-4-1).

¹⁹

Bu ston gives an equivalent word pad ḥdab (op.cit. JA 479-5). With regard to these four goddesses, see ch. 4 (Vol. 2, 45-4-6 f.), ch. 6 (Vol. 2, 47-5-6 f.) and ch. 12 (Vol. 2, 55-2-7 f.) of the Abhidhanottara; the position of these goddesses accords with that in the Saṃvarodaya.

²⁰

Bu ston: mtshams kyi ḥdab ma bshi (op.cit. JA 479-6).

²¹

The following two verses occur in Bu ston, op.cit. 479-6 f.

Kakāsyā²² (the goddess with the face of a crow), imagined to be of blue colour and with two arms (29). At the north gate, is Ulūkāsyā (the goddess with the face of an owl), green and with hair loosened. And likewise, at the west gate abides red Śvanāsyā (the goddess with the face of a dog). Sūkarāsyā (the goddess with the face of a pig) looks yellow and is at the south gate, seated on a preta-ghost (30).

In the quarter of fire (south-eastern), in the south-west quarter, in the quarter of wind (north-western) and in the north-east quarter, are Yamadādhī²³, Yamadūti, Yamadāṁstrī and Yamamathanī²⁴ respectively (31). In this way, the goddesses²⁵ (are) in the places (corresponding to) the intermediate directions; (they have) two fascinating shapes.²⁶ Having preta-ghosts as their seats, they are very terrible and are adorned with five mudrās (32). They have kapāla-vessels and khatvāṅga-staves in the left hand, and vajras and swords in their right hands. They are sarvayoginīs, and grant every siddhi (33).

Then, knowing two (kinds of) armour-spells, he should imagine the circle of wisdom, and make (it) enter into the samaya-circle through the mantra and mudrā of a yogin (34).²⁷

22

With regard to these four goddesses, see ch. 2 (Vol. 2, 41-5-4), ch. 4 (Vol. 2, 45-5-8) and ch. 12 (Vol. 2, 55-5-1) of the Abhidhanottara; the position of these goddesses accord with that in the Saṁvarodaya.

23

tib. gśin rje brtan ma suggests Yamadṛdhī. Abhidhanottara ch. 4: gśin rje bsreg ma and ch. 12: gśin rje sreg ma suggest Yamadagdhī; the corresponding word in Skt. MSS belonging to the University of Tokyo is: Yamadātī (Yamadādhī?) (No. 173, ch. 1), Yamadādhī (No. 474, ch. 4) and Yamadātī (Yamadādhī?) (No. 173, ch. 9), Yamadādhī (No. 474, ch. 11) respectively. The Yoginīsaṁcārya has gśin rje brtan ma (ch. 4, Vol. 2, 238-2-8) or gśin rje brtan (ch. 6, Vol. 2, 239-1-8).

24

With regard to these four goddesses, see ch. 4 (Vol. 2, 46-1-1) and ch. 12 (Vol. 2, 55-5-4 f.) of the Abhidhanottara.

25

From the context, devī should be taken as pl. and refer to four goddesses such as Yamadādhī and so on; this is shown by Bu ston, op.cit.JA 480-1 f.

26

Yoginīsaṁcārya, ch. 6: gśin rje brtan sogs mtshams bshir te // de dag shabs gñis rkyañ ba dañ // gzugs gñis ldan shif yid hphrog ma // 'Yamadādhī and so on are in the four intermediate directions. They stand with their feet apart. They are goddesses equipped with two shapes and fascinating' (Vol. 2, 239-1-8 f.). It is still not clear what 'two shapes' means. A similar expression can be found in ch. 4 (Vol. 2, 46-1-2) and ch. 6 (Vol. 2, 48-2-1) of the Abhidhanottara.

27

This verse occurs in ch. 8 of the Yoginīsaṁcārya (Vol. 2, 239-2-8 f.).

Now, I will tell two (kinds of) armour-spells:²⁸

Om ha on the heart, nama hi on the head, svāhā hum on the top of the head, vausat on both shoulders, hum hum hoh on both eyes, phat ham on every limb; this is the (magic) weapon (35). Firstly, (there is) Vajrasattva; secondly there exists Vairocana; thirdly Padmanarteśvara; Śrīheruka is said to be the fourth (36); fifthly there is Vajrasūrya and sixthly Paramāśva; it is protected by six armour-spells (37).

Om vam is Vajravairocanī, hām yom is Yāminī, hrīm mom is Mohani, hrem hrīm is Saṃcālīnī, hūm hūm is Saṃtrāsini, phat phat is on Candikā, on all limbs (are) weapons (38). On the navel, on the heart, and likewise on the face, on the head, on the top of the head and on all limbs (are) weapons.

Om yogaśuddhāḥ sarvadharmā yogaśuddho 'ham²⁹ (Om, all the dharmas are purified by yoga; I am purified by yoga) (39).

Putting in his own heart the circulating dākinījālasaṃvara, which belongs to the deities of mudrā of the heart and so on, with the right and left hand, he should make it blossom forth like a lotus-flower. Thus, he should cause to arise the best of yogas, the most excellent, the yoga of the gods (40).³⁰

Being connected with the circles of dharma (the body of dharma itself), saṃbhoga (the body of enjoyment), nirmāṇa (the body emanated) and mahāsukha (the body of the great pleasure), the body has been adorned in its limbs by means of twenty-four veins (41). With the help of twenty-four pīthas he should maintain the body together. Thus the hero is made of "lump" (pinda); and he is indeed equal to all the buddhas (42).

28

The doctrine of two kinds of armour-spells occur in ch. 4 (vol. 2, 46-2-7 f.), ch. 5 (Vol. 2, 47-2-4 f.), ch. 6 (Vol. 2, 48-3-2 f.), ch. 7 (Vol. 2, 49-3-3 f.), ch. 8 (Vol. 2, 50-1-2 f.), ch. 9 (Vol. 2, 50-4-8 f.) and ch. 14 (Vol. 2, 59-4-8 f.) of the Abhidhanottara and ch. 7 of the Yoginīsaṃcārya (Vol. 2, 239-2-3 f.). The wording in the Abhidhanottara is different from that in the Saṃvarodaya; but it is not easy to decide which wording is more refined, or in other words, more recent. The wording in the Yoginīsaṃcārya is, contrary to expectation, more similar to that of the Saṃvarodaya than to that of the Abhidhanottara.

29

This mantra is found in ch. 3 of the Abhidhanottara (Vol. 2, 42-3-5). See Bu ston, op.cit. JA 482-2 f.

30

A passage corresponding to this verse occurs in Bu ston, op.cit. JA 487-4 f.; but its meaning is still not clear.

Through the yoga in the shape of non-duality, the unthinkable abode has been shown. He should imagine the highest abode through a yoga corresponding to his mind (43).'

Chapter thirteen: explanation of origination of Śrīheruka.

CHAPTER XVII. EXPLANATION OF THE CHARACTERISTICS OF THE
ROPING OUT OF THE MANDALA.¹

'Now, I will explain the supreme (ritual of) drawing the mandala.

Being invited by some one or wishing merit for himself (1), a man, abiding in the circle possessing his own (guardian-) deity, should at first perform the preparatory worship. He should dedicate the offering of food to him who is entitled to the preparatory worship (2).

He who is firm, who knows the profound dharma and who is experienced in consecrating² and the offering of food, who knows the truth about the homa and the mandala, who is learned in all vidyās (spells) (3), who believes in the process of the way of mantras, who is beautiful and agreeable to look at, devoted to his master, compassionate and instructed as to the arising of saṃvara (saṃvarodaya) (4), should compose the mandala in those places: in a temple, in a shrine, at a rest-place, in a pavilion, in clean places, and in the graveyard of the original fulfilment (ādisiddhi)³ (5).⁴

1

As is expected, this chapter is closely related with Bu ston's Mandala-vidhi; the latter, though it contains much elements which cannot be traced in the Samvarodaya itself, is sometimes very helpful in translating the text. Enumerating the sources, Bu ston says in the final remarks of the Mandala-vidhi as follows: 'Using the commentary on the Samvarodaya-tantra, the commentary of the Vajradāka "Bhavabhadra", two rituals composed by Nor bzañ, mandala-vidhis composed by Kṛṣṇa, Lva ba pa and Bi bhu ti as the main sources, relying on the commentary on the Samputa-mūla-tantra, "the songs", the Abhidhāna, the Vajramālā-tantra and the Vajramālā-mandala-vidhi and collecting necessary references from the Buddhakapala-mandala-vidhi composed by Saraha, four mandala-vidhis of the Guhyasamāja and three mandala-vidhis of Yamantaka (or the Yamantaka-tantra?), the Śrīsaṃvarodaya-mandala-vidhi entitled Vimaladhara has been composed' (JA 604-4 f.). These sources enumerated are yet to be identified.

2

pratisthā is mentioned in kalpa 5 of the Caturyoginīsaṃputa (Vol. 2, 244-3-7 f.).

3

ādisiddhiśmaśana occurs in ch. 1 of the Laghusaṃvara (Vol. 2, 26-1-3); but its meaning is not clear. cf. bTsoñ kha pa, op.cit. Vol. 157, 8-1-4.

4

This verse is quoted in Bu ston, Mandala-vidhi, JA 495-2.

⁵He should not do digging and so on within the ground which is marked out; (only) touching (the ground) with his hand, he should recite the mantra, the character Hum⁵; this is the purifying of the ground (6). He should clean twice⁶ as much ground (as is necessary) for the place of the mandala; this ground should be pure through the purification of his own mind (7).

⁷The teacher (acārya), whose nature consists of the deity, who manifests himself in the nature of all buddhas, the hero holding a vajra and a bell, should be invited together with Dākinī (8). The wise man, wielding the vajra and occupied in clanging the bell, should remove the host of wicked (spirits) together with deities, asuras and guhyakas (saying as follows) (9). "Let the multitudes of obstacles (such as) katapūtanas (stinking-ghosts) and so on depart ! I possess the power of compassion, I am auspicious, I put into motion the circle of protection (10). With a vajra of blazing form, I will tear asunder those who are born from the three bodies. If someone will disregard me, he will be destroyed in this very place; (thus) not otherwise (11)."

Marking out the place⁸, he should make a boundary fence.⁹
¹⁰Praising (the goddess) Prthivī,¹¹ born from the character Vam, golden, having a golden jar in her left hand (12) (and) Pratiññā (-mudra) (the hand-posture of promise) in her right hand, he should

5

The following three lines are quoted in Bu ston, op.cit. JA 497-2 f.; the first pāda of this quotation: śñon du las byas sa yi char seems to accord with tib. (= MS A parikarmītabhūghage?). Bu ston defines the passage preceding to this pāda as sa brtag pa (op.cit. JA 495-5); this suggests that this pāda should be parikalpitabhūghage.

6

A similar expression can be found in ch. 2 of the Laghusaṃvara (gñis hgyur rnam par sbyaṅ) (Vol. 2, 26-2-4) and the corresponding chapter (ch. 49) of the Abhidhānottara (Vol. 2, 80-1-2).

7

The following two verses are quoted in Bu ston, op.cit. JA 499-2 f.

8

Bu ston, op.cit. JA 496-6 f.

9

Bu ston, op.cit. 500-5 f.

10

The following three lines are quoted in Bu ston, op.cit. JA 502-2 f.

11

According to Vajra's commentary on the Cakrasaṃvara (No. 2128. Vol. 49, 167-1-1), Prthivī is explained in ch. 2 of the Laghusaṃvara; but it cannot be found there. Its explanation is given in Bu ston, op.cit. JA 502-2 f.

practise.¹² "O Goddess ! you are an eye-witness ! I, So-and-so, am going to draw the mandala (13)."

Worshipping with flowers and incense, presenting a respectful offering, the wise man should invite "the excellent vajra of wrath" (krodhasadvajra), the tathagata, (saying) "O reverend Lord (14)!" "O Lord ! I desire to draw the mandala of the coming forth of the innate (sahajodaya) out of compassion for the disciples and for the sake of honouring you (15). Therefore, O reverend Lord ! be pleased to favour me in my devotion ! Let the buddhas and the other deities of mantra pay heed (16). The deities (who are) the guardians of the world, the living beings who are instructed in perfect enlightenment, all who delight in the teaching, who are equipped with vajra-eyes (17), may they be compassionate towards me and my disciples. I will draw the mandala, the mandala of the coming forth of saṃvara (saṃvarodaya) (18)."

¹³ The string, which possesses five wisdoms, is split into twenty-five (threads); (the yogin) should twist (them) into a string (imagining that they have) the nature of all the dharmas (19). The yogin should pronounce the syllable Hūm; (Three pādas of the verse 20 are to be omitted) (20). Pronouncing the syllable Jah three times¹⁴ and keeping by the fist of the left hand at the navel, the wise man should stretch "the air-string" (khasūtra),¹⁵ and in the same manner, he should stretch the string on the ground (21).¹⁶ With the string which is new, well twisted, of proper length and beautiful, the man of wisdom should rope off the mandala of the auspicious sahajodaya (22).¹⁷

¹²

If pratijñā is to be taken as the object of prajojayed, the meaning of this passage is as follows: 'Praising (the goddess) Prthivī, born from the character Vam, golden, having a golden jar (12) in her right hand, he should make a vow'. But, this does not seem to be very likely. tib. rab tu bskul bar bya 'should encourage' is not confirmed by Skt. MSS.

¹³

The following two verses are quoted in Bu ston, op.cit. JA 519-1 f.

¹⁴

Bu ston, op.cit. JA 519-5.

¹⁵

Bu ston, op.cit. JA 520-4.

¹⁶

This verse is quoted in Bu ston, op.cit. 520-6 f.

¹⁷

The first three pādas of this verse occur in Bu ston, op.cit. 517-1.

Beginning from a half hasta till one hundred hasta,¹⁸ (he should stretch) at first the brahma-string¹⁹ and secondly the corner-string (23).²⁰ The master always abides in the western and southern places; in the places of eastern and northern directions abides the disciple who has entered into concentration of mind (24).

At first, one chequer should be roped out with (the string) four times as long as the measuring-cord (mana); then, one chequer should be roped out with (the string) eight times as long as the measuring-cord (25). Again, one chequer should be roped out with (the string) eight times (as long as the measuring-cord), and furthermore, one chequer should be roped out with (the string) twice (as long as the measuring-cord) (26). Then, with (the string) four times as long (as the measuring-cord), one chequer should be roped out. Again, with (the string) twice as long (as the measuring-cord), one chequer should be roped out. And then, the intelligent, the wise man (should rope out) one chequer with (the string) four times as long (as the measuring-cord) (27). Then, he should rope out two chequers with (the string) twice as long (as the measuring-cord); half of it is to be drawn in the double hollow-space (dviputa); this is the roping out of the mandala (28). The mandala is marked with sixty-four strings; this is the feature of the string. He should stretch the string²¹ as far as the circumference of the mountain-range Cakravāḍa, as is told in the ritual (29).

²²With the powder made from five kinds of jewels or with grains of rice and so on, the teacher who has entered into the concentration of mind, going to the north-eastern direction and others, should very secretly draw with his left fist five lines (which are) of white, yellow, red, green and black colour (30, 31).

18

This line is quoted in Bu ston, op.cit. JA 521-3.

19

Bu ston, op.cit. JA 519-6 f.

20

This line is explained in Bu ston, op.cit. JA 520-7 f.

21

Bu ston explains the manner of stretching the string (op.cit. JA 515-7 f.); but his explanation is not helpful for translating these verses.

22

Verse 30 is quoted in Bu ston, op.cit. JA 523-7 f. Verse 31 and the first line of verse 32 are quoted in Bu ston, op.cit. JA 525-2 f.

The lines should be drawn with an interval of only one barley-corn between them; if it is drawn (too) thickly, a plague arrives; and if the line is (too) thin, wealth will be lost (32). If it drawn crookedly, a quarrel will occur; and if the line is interrupted, death will come.²³

²⁴In the east, (the portion of the ground) is very white; and in the south, it is connected with yellow colour (33). The western portion (of the ground) is reddish; in the north, it is connected with (the colour of) marakata. In the middle, the portion of the ground shines forth in indranila-blue (34).

He who has well concentrated his mind should draw all the corner-places and the intervening spaces between the pinnacles of the gates inlaid with diamond-jewels (35). (He should draw the maṇḍala which is) adorned with eight graveyards in the middle of the net of diamonds (vajrapañjala)²⁵ (these graveyards are named) Candogra ("gruesome and horrible"), Gahvara ("the thicket"), Vajravāla ("diamond-flame") and Karaṅkin²⁶ ("having skeletons") (36). In the north-eastern quarter, there is (the graveyard called) Aṭṭahāsa ("loud laughter"); in the quarter of fire (south-east), (the graveyard called) Lakṣmivana²⁷ ("the forest of happiness");

23

These two lines are quoted in Bu ston, op.cit. JA 529-2.

24

The following six lines are quoted in Bu ston, op.cit. JA 526-3 f.

25

According to Bu ston's Mandala-vidhi, the eight graveyards surround the net of diamonds (JA 528-4 f.).

26

In Bu ston's Sādhana, the directions of each of these graveyards are shown as follows: śar du gtum drag / byañ du tshañ tshiñ hkhriḡs pa / nub tu rdo rje hbar ba / lhor keñ rus can / (JA 474-5). Eight graveyards are explained in ch. 15 of the Dakṛṇava (Vol. 2, 163-5-6 f.) and the Śmaśānālākāra-tantra (No. 47); names and directions in the latter are different from those in the Samvarodaya-tantra and Bu ston's Sādhana: dañ por dur khrod bśad par bya // śar du gtum drag nag po che // lho ru ha har dgod ser che // nub tu mi bzañ dmar po ste // byañ du tshañ tshiñ ljañ khu che // me ru gYer kha can yin te // bden bral htshams su hbar ba hdsin // rluñs mtshams dmyal sogs gnas pa ste // dbañ ldan du ni dbyibs can du // (Vol. 3, 23-5-6 f.).

27

tib. bkra śis mchog suggests lakṣmivara (= MSS BPL); Bu ston's Sādhana: bkra śis tshal suggests lakṣmivana (= MSS CIDE); ch. 15 of the Dakṛṇava have dpal gyi gnas (Vol. 2, 163-5-7) (lakṣmivana?).

in the south-western quarter, (the graveyard called) Ghorāṇḍhakāra ("terrible darkness"); and in the quarter of wind (north-west), there is (the graveyard called) Kilikilāraṇa ("kilikilā-cries of joy") (37).²⁸

There are in the east a śirīṣa-tree, an aśvattha-tree, and especially a kaṅkelli-tree and a cūta-tree, a vata-tree and a karañjaka-tree, a creeper, a parkaṭi-tree and a pārthiva-tree (38).²⁹

There are (the guardian-deities of the four quarters:) Indra, Kubera, the king of serpents (Varuṇa) and the Lord Yama; and (the guardian-deities of the four intermediate quarters:) Īśana, Agni, the king of rakṣasas (Nairṛti) and the lord of wind (Vāyu) (39).³⁰

There are (the kings of serpents:) Vāsuki, Takṣaka, Karkoṭaka, Padma, Mahāpadma, Huluhulu, Kulika and Śaṅkapālaka (40).³¹

(There are clouds) roaring, shaking, terrible, whirling and thick, filling and likewise raining and violent; those are the lords of clouds³² (41).

And, there are other various horrible creatures³³ (such as) a crow, an owl, a vulture, a jackal and she-jackal, a hawk and a she-hawk, a "lion-faced" and a "tiger-faced" (creature) (42), together with (other) surprising (creatures such as) a snake, a "cow-faced" and a lizard and so on.

28

A passage corresponding to this verse occurs in Bu ston, op.cit. JA 474-5 f.

29

With regard to the eight kinds of trees (śiñ brgyad), Bu ston, ibid. mentions as follows: śiñ brgyad ni / śar du śi rṣa / byañ du a śva ttha / nub tu ka űkel / lhor tsu ta / dbaṅ ldan du pa tra / mer ka ra űdsa / bden bral du pa tra pa rka / rluñ du par thi ba rnams so // (JA 474-6 f.).

30

phyogs skyon brgyad are mentioned in Bu ston, op.cit. JA 474-7 f.; the directions of each of these gods accord with those mentioned in the Śmaṣanalaṅkāra-tantra (Vol. 3, 24-1-2 f.).

31

These eight kings of serpents are mentioned in Bu ston, op.cit. JA 475-4 f.

32

Eight kinds of clouds are mentioned in Bu ston, op.cit. JA 475-6 f., and in the Śmaṣanalaṅkāra-tantra (Vol. 3, 24-1-4 f.).

33

An explanation of these creatures is given in Bu ston, op.cit. JA 476-2 f. cf. ch. 9 of the Abhidhanottara (Vol. 2, 51-5-7 f.).

There are skeletons, (dead bodies) split by spears, (dead bodies) hanging down (from trees), (dead bodies) half burnt and (cut) heads (43); (these graveyards are) terrifying (being filled) with skulls, knees, large bellies, (heads showing) tusks and bald heads.³⁴

Together with many siddhas and vidyādharas, troops of yogins and yoginis equipped with the practice of samaya (44), yakṣas, vetālas, rakṣasas and so on who are roaring with kilikilā-laughter, a group of teachers (ācārya) who have attained great fulfilment and supernatural power is to be seen in the middle of the eight graveyards (45).'

Chapter seventeen: explanation of the characteristics of roping out of the mandala.

34

This passage is paraphrased in Bu ston's Sādhana as follows:
ro dañ / keñ rus dañ / mduñ gis phug pañ ro dañ / ro śiñ la
hphyañ ba dañ / phyed tshig pa dañ / mgo thod dañ / byin pa dañ /
mgo rdum dañ / gtsigs pañ mgo dañ / rus pañ tshogs kyis gañ ba /
 '(these graveyards are) filled with dead bodies, skeletons, dead bodies split by spears, dead bodies hanging down from trees, (dead bodies) half burnt, skulls, shanks, bald heads, heads showing tusks and a collection of skeletons' (JA 476-3 f.).

CHAPTER XVIII. THE CONSECRATIONS.

'Now, I will explain (the characteristics of the ācārya and other things).

(A man described as follows) is considered to be a vajrācārya: a man who has subdued (his passions), whose appearance is tranquil, who gives safety to all living beings (1), who knows the practice of mantras and tantras, who is compassionate and who is learned in treatises, who talks sweetly to everybody, who treats all living beings as his own son (2), who always takes pleasure in almsgiving and is engaged in yoga and dhyāna-meditation, who speaks the truth, who does not injure living beings, and whose mind is compassionate and intent upon benefiting others (3).

Sameness (samata) is the emblem (mudrā) of his mind; he is the protector of living beings; he knows the various intentions of living beings and is (regarded as) the kinsman by those who have no protector (4). His body is complete as to the sense-organs; he is beautiful and is agreeable to see. He knows the true meaning of consecration (abhiṣeka). His speech is clear; he is an ocean of merits (5); (and) he always and continuously resorts to pīṭha; he is called an ācārya (teacher).

A disciple is a man to be received by the ācārya; he is of good family and aspires to the dharma (6).

If (his mind) is pitiless, wrathful and cruel, dull, covetous and not self-controlled, and if he is cruel, foolish and hard-hearted, and pitiless to other living beings (7), and if he is covetous of another's property, he should always be shunned by the master.

¹For those who are firm and well controlled, who have intelligence and patience, who are honest and not false (8), who have completely abandoned the ten vices and are pleasant for (other) people to see, who will not touch another's property as if it were a burning fire or poison (9), who always and continuously worship the master, who aspire to see the true teaching, who always take pleasure in almsgiving and are longing for the other world (10), when they have been approved as disciples, (the ācārya) should consecrate the beautiful mandala.

1

The following six lines are quoted in Bu ston's Mandala-vidhi, JA 599-1 f.

²Joining the palms of his hands, (the disciple) who has his mind made up should request (as follows) (11). "Be my instructor (śāstr), O great hero! O (you) who are united with the best yoginī in the form of samputa! I desire, O great protector! the firm course to the great enlightenment (12). Grant me the truth of samaya. And, grant me the bodhi-mind. Tell (me) the secret of heroes, of heroic, female lords and of Vārāhī and Heruka, the perfect purity of pīṭha and so on, which exists in the body. Grant me the buddha, the teaching (dharma) and the community of monks (saṃgha) (that is,) the three refuges (13, 14). Make me enter, O Lord! into the supreme city of the great liberation!"

³(Then, the master says,) "Come! O my dear son! to the Great Vehicle (mahāyāna). I will explain correctly to you who are a fit vessel for the great course (mahānaya), the course of practice of mantra, the ritual. (I will explain) the unequalled wisdom, which has been attained through the power of the vajramantra (15,16). Then, in order to attain omniscience, O son, resolve (as follows): 'Worship to the master, and, benevolence, devotion to the buddha and love for living beings (will be exercised by me) (17). The fundamental sins will be completely abandoned and the coarse sins

2

The following eight lines are quoted in Bu ston, op.cit. JA 510-2 f.

3

In quoting the following nine lines, Ratnarakṣita seems to have interpolated one line: sku gsuñ thugs kyi rdo rje can // dus gsum hbyuñ bañi sañs rgyas rnams // between the two lines of verse 16, and three lines: sñags kyi rab sbyor mñam med pa // gañ gis śā kya señ ge sogs // mchog rnams kyis ni bdud kyi sde // stobs chen drag po chen po bcom // rjes hgug hjig rten thugs chud de // hkhor lo bskor nas mya ñan hñas // after verse 16. With these interpolations the text of this passage is as follows: "Come! O my dear son! to the Great Vehicle (mahāyāna). I will explain correctly to you who are a fit vessel for the great course (mahānaya), the course of practice of mantra, the ritual [Those who are the holder of vajra of body, speech and mind, the buddhas who exist in the three times (past, present and future)], have attained the unequalled wisdom through the power of the vajra-mantra (15, 16), [through the unequalled practice of which, the highest (buddhas) such as the lion of the Śākya-tribe, conquered the host of enemies who have great power and are very fierce. and conforming themselves to and understanding the intention of people of this world, turned the wheel of the right teaching, and entered into Nirvāṇa"]. In quoting this passage, Bu ston included these interpolations (JA 510-7 f.).

avoided. Living beings will be propitiated; and the Small Vehicle (hīnayāna) will not be resorted to (by me) (18). Those who have not yet crossed over (the ocean of transmigration), them I shall cause to cross over; I will liberate those who are not yet liberated. I will relieve living beings from the mass of afflictions of transmigration (19)."

Then, (the ācārya) shall apply perfumes⁴ to those disciples who possess (the three kinds of) trainings. He shall give toothpicks to them who have fulfilled the rites of purification, ablution and so on (20). Binding especially the arm of the disciple with a red thread, (the ācārya) shall always give him protection.⁵ He shall give kuśa-grasses consecrated by the mantra of the character Dhīh to him (21).⁶ (The ācārya) should grant (the disciple) the saṃvara (commandments) of the body, speech and mind; and he should cause him to observe (his own) good and bad dreams (22).

⁷There he shall cause (the disciples) who are provided with the fee (to the ācārya) (dakṣiṇā) and (whose faces) are covered by veils to enter into the mandala, while making them grasp a handful of flowers in their hands (23). The disciples can purify their sins of their former lives and so on by looking at the mandala.⁸ If (the disciple) is asked "O who are you?" he answers "I am a fortunate man (24)."

4

tib. lhag gnas bya suggests that the translator thought the root of adhivasayet to be vas; the following passage in Pañj. suggests that the root is vas: de nas brjod ciñ sñiñ ga nas mgrin pa dañ spyi bor lag pa gYas pa nas bzuñ bañi driñi chu dañ ldan pañi rdo rje reg ste / 'then, reciting (the syllables hum aḥ om), (the ācārya) should touch the heart, the throat and the top of the head of the disciple with the vajra, which is soaked in fragrant water, held in the right hand' (Vol. 51, 101-1-7 f.). This section of Pañj. is called slob ma lhag par gnas pañi cho ga (Vol. 51, 101-3-5); this also shows the same interpretation as that of the translator of tib.

5

This line is explained in Bu ston, op.cit. JA 513-4 f.

6

This line is quoted in Bu ston, op.cit. JA 513-2.

7

The following three verses are quoted in Bu ston, op.cit. JA 540-1 f.

8

Pañj. paraphrases this line as follows: sñon du byas pañi sdug pa gañ // de dag thams cad hñi lta buñi // dkyil hñhor mthoñ nas zad par hgyur // 'all the sins committed in their former (lives) will cease to exist by looking at this mandala'. Skt. text taken alone means literally 'purifying the view of the mandala of a disciple who possesses sins committed in the former lives'.

(Then, there are rites of) samaya-water and oath-taking, and (the rite of) throwing a flower into the mandala; (the disciple) will belong to whatever family on which the flower falls (25).

⁹(The ācārya) shall confer (on the disciple) consecrations of water, crown, vajra, bell and name (that is,) the consecrations of the essence of the five tathāgatas, irretrogressions (avaivartya) of religious vow (vrata) and prediction (vyākaraṇa) (26), permission (anujñā) and consolation (āśvāsa), which have come forth from the (consecration of) jar, (the consecrations of) canopy, seat and vidyā (magical spell) and so on, together with (the consecrations of) vajra and bell and so on (27).

(Thus, he shall confer on the disciple) the complete ācārya-consecration; (and) secondly the secret¹⁰ (-consecration) which is the highest, thirdly wisdom-knowledge¹¹ (prajñājñāna) (-consecration), and also, the fourth¹² (consecration) (28). "A man who is possessed of those consecrations is called the consecrated one (samayin). Seeing and entering into the most excellent, the mandala of the highest secret (29), free from all evils, you are now well established.

9

The following three verses are quoted in Bu ston, op.cit. JA 551-7 f. and a detailed explanation of these abhiṣekas is given. According to Bu ston, the five consecrations, which are (five) vidyā-consecrations, correspond with five buddhas and five wisdoms as follows:

water	<u>Akṣobhya</u>	<u>Dharmadhātuvīśuddhi-jñāna</u>
crown	<u>Ratnasambhava</u>	<u>Samatā-jñāna</u>
vajra	<u>Amithāba</u>	<u>Pratyavekṣaṇa-jñāna</u>
bell	<u>Amoghasiddhi</u>	<u>Kṛtyānusthāna-jñāna</u>
name	<u>Vairocana</u>	<u>Ādarśa-jñāna</u>

Vrata, vyākaraṇa, anujñā and āśvāsa are included in avaivartya (JA 150-1 f.); and avaivartya-consecration is alias ācārya-consecration (JA 573-1 f.). Five vidyā-consecrations and the ācārya-consecration are said to be the consecration of jar. As five vidyā-consecrations are the cause of the ācārya-consecration, they are included into the latter; consequently, the consecration of jar is equivalent to the ācārya-consecration (JA 580-1 f.). Systems of various kinds of consecrations, mentioned in Pañj. and Bu ston's Mandala-vidhi are to be studied carefully.

10

Bu ston, op. cit. JA 580-6 f.

11

Bu ston, op. cit. JA 583-4 f.

12

Bu ston, op. cit. JA 589-5 f.

And, this samaya-saṃvara of the fulfilment should constantly be protected (30). Permission (ājñā) spoken equally by all the buddhas is supreme and eternal."¹³

The disciple, throwing himself at the master's feet lovingly through devotion (31), should say "O the lord! I will do as you order."¹⁴ Then, offering to the master the fee told by the tatāgatha (32), (and offering) various kinds of ornaments and garments and so on, and above all his own body, (the disciple) who has done that which is to be done and who is famous for receiving the supreme consecrations, gladdened, will say (as follows) and will complete the remainder. "Now, my birth is fruitful; and my life is fruitful too (33, 34). Now, I am born in the family of the buddha; now, I am the son of the buddha."¹⁵

He should complete the homa (burnt-offering) there; he should offer food to the community of the monks (35). Then, he should give a banquet to the whole assembly (gaṇacakra); and he should satisfy depressed, helpless people.¹⁶ Afterward, (the disciple) will devote himself to the practice of samaya in accordance with the instruction (36).

In the person who has become a fit vessel through the method of imagining the circle (cakra) and so on, there will be fulfilment complete with correct teachings; (thus) not otherwise (37).'

Chapter eighteen: the consecrations.

13

tib. rjes gnañ mchog tu dbugs dbyuñ ba suggests ājñā parama āśvasaḥ (unmetr.) 'permission is the supreme consolation'; this is not attested in Skt. MSS.

14

These two lines are quoted in Bu ston, op.cit. JA 599-3 f.

15

These two lines are quoted in Bu ston, op.cit. JA 599-4 f.

16

These two lines are quoted in Bu ston, op.cit. JA 601-1 f.

CHAPTER XIX. EXPLANATION OF THE OMENS OF DEATH AND THE YOGA
OF THE DEPARTURE (OF CONSCIOUSNESS).

'Now, I will explain the characteristics of the determination of death.

The wise man should observe the omens of his own body and the exterior (omens) (1).

When there are wounds in the soles of the feet or a wound at the navel, he will then die after three days (2). If he sneezes at the same time when (excreting) both faeces and urine, he will die at this very moment, or after one year (3). If in the middle of or at the end of the time of union of bhaga and liṅga there will be a sneeze at the same time, then, there will certainly be death in a month (4). When there are at the same time wounds in the heart and in the middle of the throat, he will die in one and a half month unless he obeys the (right) teaching (5).

A man who does not see the reflected image of a small doll¹ in the left eye in the mirror will certainly die within seven days if he does not apply a remedy for it (6). If he gets a wound at the root of the ear or in the middle of both eyebrows or on the top of the head, and if the wound extends to four joints², he will die on the same day (7).

If a man suddenly grows fat or becomes lean, gets angry or is struck with fear, he will die within one year unless he obeys the (right) teaching (8). If his semen turns black in the first day of the light half of a lunar month, then he will die within six months; if it becomes red, it indicates that he is sick (9).

If both (his) eyes shed tears perpetually, if there is illusion in regard to visual forms, if he does not see his own image reflected in a mirror or in the water (10), if he sees a rainbow at night or a group of stars in the daytime, or lightning flashing in the southern sky without cloud (11), if he sees the milky way and also a shooting star in the daytime, if he sees geese, crows and peacocks

1

tib. mig gYon hbras buhi gzugs brñan 'reflected image of the pupil of the left eye'.

2

tib. bshi po mtshuñs par zug gyur na is a direct translation of Skt, and is not helpful to make the meaning clear.

gathering in one place (12), if he sees two moons or two suns, and also, his own head in flames, the city of gandharvas (a mirage) on a tree-top or on the summit of a mountain (13), if he sees preta-ghosts, piśāca-demons and other invisible, terrible beings, he will suddenly tremble and will faint at every moment (14). If he sees (them) one by one, he will die within one month.

If he sees the moon free from stain or the sun exempt from rays of light (15), (and if he sees) the sun at night and the moon in the daytime, and likewise, his own eyes in flames, a fixed star of the size of Mt. Sumeru, and an ocean like a river (16), if the semen drops at the same time as urine and faeces, he will die within half a month unless he obeys the (right) teaching (17).

And, if he sees (his own) shadow having a white appearance, or if he does not see his head (of the shadow), he will die within one year (18). If the left hand (of the shadow) is not seen, (his) son and wife will die; if the right hand (of the shadow) is not seen, more important people (such as) the father, the wife and so on (will die) (19). If his urine gushes in five streams, if it winds towards the left, if it has a bad smell or is acid and so on, he will die within six months (20).

If a man ascends, in a dream, a pile of sand or ashes, or the spire of a monastery, then, he will die as said before (21). If a man riding on an ass or on a monkey ascends an ant-hill or a pile of dust and is led in a southerly direction in a dream (22), if (he sees in a dream) a black woman, clad in black garments, who is in love with a man, and who must be known to be Kālarātri, he will meet Yama (23). If he dreams a dream in which he is eaten³ by dogs, crows, vultures, jackals, bears, prata-ghosts or piśāca-demons, (he will die) definitely within one year (24). If in a dream he is clad in a red garment, adorned by a red wreath, and anointed with oil, he cannot live more than six months (25).

Death is deceived through practices in accordance with instructions. Death is conquered by truth (tattva); Death is overcome by the (right) teaching (dharma) (26). For this reason, the contemplations, concentrated on dharma, is the means of accomplishing the process of the complete enlightenment.

3

bhakṣyante is to be interpreted as bhakṣyate (metrically better).

Furthermore, I shall speak of another excellent meditation (27). When various omens appear and when breathing is interrupted at every moment, (a practiser) should purify the maṇḍala of the body by the method (yoga) of exhalation (recaka) and inhalation (pūraka)⁴(28).

At the time of death, the supreme yoga of departure⁵ is attained. He should fill the veins at the nine gates through inhalation (pūraka) (29). Through "stopping the breath" (kumbhaka), he should check the doorways; this is the purification of the holes of the gates. Through exhalation he should make (those veins) completely empty; he will make (everything) calm, completely calm⁶ (30). Consciousness will (then) be carried away. Then, the wise man should practise yoga which is equipped with āli and kāli for the sake of people going to the opposite shore (pāragāmin) (31). He should connect the character Hum⁷ with the heart⁷; and should put one and a half character⁸ below and above it; (he should put) the seed-character of wind facing downward at the lower part of it (32). The seed-character of wind⁹ should be made into two; the practiser of yoga (yogavat), joining (those two) in the form of saṃputa, should recite the mantra of one and a half syllable twenty-one times in succession (33).

The gate of wind through which departs consciousness mounted on the wind is thought to bring about the fulfilment of liberation (34).

4

Translation of this pāda is provisional; Pañj. dbyuñ dañ dgañ bañi sbyor ba yis as well as tib. seems to be a free translation.

5

Pañj. phyuñ nas hpho ba shes pa lus las byuñ nas hpho ba ste / rnam par ses pa gsegs so, though the quotation phyuñ nas hpho ba is hard to understand, suggests 'the yoga of departure of consciousness from the body'.

6

This pāda is not clear. Pañj. bum pa can goms pa las rluñ brtan par gyur pa na / sems brtan pa skye bar hgyur ro // (Peking) 'When the wind becomes firm through the practice of kumbhaka, he will obtain a firm mind'; less likely, sDe dge which has brtan par skye bar 'he will be born firmly' or 'he will be born to "firmness"'.
7

7

Less likely 'the hrdaya-mantra'.

8

According to Pañj. phyed bcas yi ge shes pa hi dañ dbyaṅs spaṅs pañi ka yig go, this syllable is Hik.

9

Pañj. rluñ gi sa bon yam yig go "'the seed-character of wind" is Yam'.

I shall explain (it) by distinguishing the highest and the lowest; hear! O guhyaka! If (the consciousness of a man departs through the gate of) the navel, he will be born in the region of desire which belongs to heaven; (if it departs) through (the gate of) the mark between the eyebrows, he will be a corporeal being (35). (If it departs) through (the gate of) the upper part, (he will be born in) the region without form; those are the fortunate existences which are distinguished (from the unfortunate existences).

(If it departs) through both nostrils, he will be a yakṣa; likewise, (if it departs) through both ears, (he will be) a kinnara (36). If both (consciousnesses) depart through the eyes, O goddess, he will be king of men. The gate of the mouth brings about (the existence) of pretas; likewise, (if it departs) through (the gate of) urine, there will be (the existence of) animals (37). If (the gate of departure of his consciousness is) the anus, he goes to hell; these are the existences different from liberation.

If a man has come to the time of death, (consciousness) departs; (but, if he dies) at a wrong moment, it means that he is killed by a deity (38). A man is boiled in hell merely because he has been killed by a deity. For this reason, wise men should know the omens of death (39).'

Chapter nineteen: explanation of the omens of death and the yoga of the departure (of consciousness).

CHAPTER XXI. EXPLANATION OF PRACTICES.

'Now I shall explain the best practice, which has reached the opposite shore, through which practisers attain the final aim, as it is the cause of fulfilment (siddhi) (1).¹

In ordinary yoga-tantras, the secret (that is,) the supreme fulfilment of fulfilments, the supreme vow of vows is not proclaimed (2).

(A practiser should) hear very many tantras; he should worship an excellent master. He should receive the instruction of the master accurately and should always practise (it) (3). He should give up his wealth, his wife and likewise (his own) life as offering; getting rid of these three ties, he should always be a practiser of the practice (4). He has great strength attained by reciting magical-spells (vidyā); and he is intent on talking the truth. He is always faithful to that which has been undertaken before; he stands firm in (his) vows (5).

He should abandon passion, wrath, fear, greed, folly and conceit. Giving up the explanation of the dīkṣā-ceremony² and the (intention of) collecting books (6), he should not make a distinction between purity, impurity or purification, not between what may or may not be drunk. He, being without wrath and without self-conceit, should not care for praise or censure (7).

Adhering to the idea that everything is equal, he is always without attachment and without desire. He neither practises the homa-offering nor worships; he neither receipts (mantras) nor uses a rosary (8). He should not care about (auspiciousness or inauspiciousness of) a day, a day of the week, a lunar mansion, or the days of the four changes of the moon (parvan). He whose spirit is supreme sojourns without hesitation in his own (natural) form (9).

1

This verse is similar to Hevajra, I, vi, 1. Sn. translates caryām parāṅgatām varām by "the practice so excellent and supreme". Pañj. explains parāṅgatām as follows: pha rol son shes pa hkhor bañi rgya mtshohi pha rol tu hgro bañi rgyu ñid kyis rgyu la hbras bu ñe bar btags pañi phyir ro // 'As (this practice) is the cause of reaching the opposite shore of the ocean of transmigration, the cause is metaphorically expressed by (this word which shows) the result'.

2

tib. slob ma brtag dañ bśad suggests śiṣyavyākhyāṃ; but this is not probable. cf. Hevajra, I, vi, 23.

He should act completely without sensual desire; he should not exercise sensual desire at all.³ Having a tiger-skin as his garment, and adorned with five mudrās (10), the yogin should imagine (himself to be in) the state of Heruka (herukatva) which consists of prajñā (-wisdom) and upāya (means). He should practise the practice of Samantabhadra (-bodhisattva) with joyful mind (11). He should live in a village one night and in a town five nights. He should sojourn in the world in a manner pleasant to his mind (12).

Or, a man who desires to practise the practice named "the wind" should always wander about without friends, lonely and fixing his mind on one object (13). He who observes the vow of madness⁴ should, like a leaf whirled (by the wind), roam about a graveyard, a place where there is only one liṅga-column (ekaliṅga)⁵, a place where there is only one tree (ekavṛkṣa)⁶ or a forest (14), or on the top of a mountain, on the bank of a river, or on the shore of an ocean, in a garden or in a broken well, in a pavilion or in an empty house (15), at a cross-road or at the gate of a city, at the gate of a royal palace, in the hut (of an ascetic), in the house of a mātāṅga-woman or a cowherd's wife, in the house of a female artisan, or in (other) concealed (places) (16).

He should adorn (his own) body with flowers which have been thrown away and are lying on the street, (or have been left) in a grave-yard, or (offered to) a liṅga-column (17). He should hang a wreath from his neck, and above all a brāhmanical cord; he should fasten on a girdle and (should have) anklets at both feet (18).

(His) talking is said to be (nothing but) reciting (mantras); and the shaking about of his hands is (nothing but) showing finger-posture. The yogin should live as he pleases (and exercise)

3

tib. 'he should not act without sensual desire; he should exercise some degree of sensual desire everywhere'.

4

With regard to unmattavrata, see Advayavajrasaṅgraha, edit. by H.P. Shastri, G.O.S. xc. 20, p. 59.

5

The word ekaliṅga occurs in Guhyasamāja, p. 90, 1. 2.

6

The word ekavṛkṣa occurs in Guhyasamāja, p. 90, 1. 2; Hevajra I, vi, 6; Abhidhanottara, ch. 4, Vol. 2, 43-5-6.

the practice without imagination (19). The yogin who has abandoned all doubts should wander about like a lion; or observing the vow of immobility, he should practise the yoga-practice (20). In an empty garden or house, in a bad village or in a house of ill repute, he should live according to the yoga of silence (living from what) he obtains (21). Sleeping, going or standing, awake or not awake, he eats what he obtains, and (his) mind is not centred on food⁷ (22). When he lives the life of a beggar, he should eat from the vessel made of (the palms of) the hands without making any distinction; he will attain fulfilment; there is no doubt about it (23).

When a man has entered upon the one vow which he prefers out of the three, when he has obtained some (supernatural) abilities, he must undertake the practice if he desires (to do so). He should (at first) dedicate his own body as offering, and then, he should undertake the practice (24). If the yogin wanders about (and exercises) the practice, he will certainly be without impurity; there should not be any doubt about it, as the supernatural powers of the buddha are unthinkable (25).'

Chapter twenty-one: explanation of practices.

7

tib. '(the state) without hunger will be well established.'

CHAPTER XXIII. EXPLANATION OF HOMA.

'Now, I shall explain the characteristics of the practice of (offering to) Agni and so on.

Hearth-pits should be made on the ground after purifying it (1). (Hearths are of various sizes) from eight aṅgulas up to one thousand aṅgulas. The hearth of eight aṅgulas is (used in the rite of) killing the enemy; (the hearth of) ten aṅgulas is (used in the rite of) increasing welfare (2). (The hearth of) twelve aṅgulas (is used for the rites of) subduing and attracting; and (the hearth of) fourteen aṅgulas, (for the rite of) pacifying. By the hearth of sixteen aṅgulas, prosperity of the family is caused¹ (3). By (the hearth of) eighteen aṅgulas, the land and the herd of cattle are increased; by (the hearth of) twenty aṅgulas, plague and illness are made to cease (4). The size of these hearths is decided according to the quantity of things to be offered (to Agni by burning); the wise man should know the proper (hearth) to be made according to (the nature of) the action (5).

Dividing (the diameter of) the hearth (ākṛānta) into three parts, two parts should be dug as the pit. This is the characteristic of the pit (khāta) common to all these (kinds of) hearths (6). The "lip-rim" (oṣṭha) should be made one-eighth of (the diameter of) the hearth-pit; and (an outer-) rim should be attached there with (its width being) a half of the width of the "lip-rim" (7).

In (the rite of) pacifying, (the hearth) is of round shape, white and facing east; the square (hearth) is (used in the rite of) increasing welfare, and is yellow and facing north. (12). (The hearth in the shape of) a half moon and facing west is (used in the rites of) expelling and exorcising; (the hearth) facing south and of triangular shape is (used in) the rites of causing hostility and killing (13). (The hearth used in the rites of) subduing and attracting and trivedī² is of red colour and triangular

1

The word abhikāraṇāt is incomprehensible; tib. does not translate it.

2

tib. dbye ba gsum suggests tribhedī; this is incomprehensible too.

shape; and (the hearth for) the rites of paralysing and bewildering is facing south-west (14). (The hearth used) in the case of expelling is of the colour of smoke and facing the direction of the wind (north-west); (the hearth used for) the vile rite of burning with a fever is always facing the direction of fire (south-east) (15).

(Then,) he should imagine the deity, (his) seat and (his) colour according to the character of the rite; by means of the form of the character Hūm, he should imagine the feature of the two-armed (deity)³ (16). He should recite instantaneously the mantra which consists of the instantaneous deity. He should carry out (the rite of) increasing welfare with contented mind, and (the rite of) pacifying with tranquil mind (17). In subduing, (he should carry out the rite) with passionate mind; and with wrathful mind, (he should carry out the rite of) killing; with hostile and fierce mind, (the rite of) expelling and exorcising (are carried out) (18).

Preparing argha-water (water of reception), water for washing feet and other things, he should invite Agni; he should imagine the character Hūm (situated) in the lotus of his own heart to be Vajrasattva (19). (He,) the learned practiser of mantra (mantrin) should observe (it to be) of the aspect of fluid and produced from the three syllables; and in the middle of it, (he should imagine) the seed-character Ruḥ to be (Agni) who is of red colour and has a beautiful face⁴ (20), who has a staff (dandakṣa) and a water-pot

3

According to Pañj. this deity is "two-armed Saṃvara" (Vol. 51, 107-4-4).

4

The figure of Agni seems to be different according to sources; Pañj. explains it as follows: 'On the mandala of fire originated from the character Raḥ, is Agni, who has arisen from the character Raḥ, sitting on (the seat of) a lotus and the sun. He is short, with a protuberant belly, three-faced and six-armed; each of his faces has three eyes. He embraces his own favorite Prajñā (the female partner) with his two central arms. He has (the mudrā of giving) safety and a rosary in his two right hands and a staff and a water pot in his left hands. He has a beard and a crest of hair twisted together (which is adorned) with a "garland of the light of consciousness" (rnam par śes paḥi ḥod zer gyi phreḥ ba) and is provided with the seal of (the figure of) the lord of the family. His body-colour and ornament vary according to the kind of action' (Vol. 51, 107-5-4). A figure rather similar to this can be found in ch. 9 of the Māyājāla-tantra (No. 102, Vol. 4, 153-3-2 f.); in this case, Agni is four-faced and four-armed; the mudrā of the first right hand is not Abhaya but Varapradā. Another figure which is very similar to the figure mentioned in the text

(kundikā) in his left hands, and a rosary and (the mudrā of giving) safety in his right hands, who has a crest of hair twisted together and a protuberant belly, and is adorned with all kinds of ornaments (21).

(The practiser) should cause (Agni) to stand near the hearth by (pronouncing) the syllables Om jah hūm; (then,) he should offer (him) water for sprinkling, water for gargling and argha-water, and cause (him) to take his place in the hearth (22). He should bring near samayasattva (the deity shown by a symbol) and cause jñānasattva (the deity of wisdom) to enter into (samayasattva); he should offer flowers, incense, and likewise a lamp, perfume and food (to him) (23). He should hold the pātrī-ladle (the bigger ladle) and the śruva-ladle (the smaller ladle) in both hands (kept) between the knees; he should offer the first offering saying "Om agnaye svāhā" (24).

Om namaḥ samantabuddhānām amukasya śāntiṃ kuru svāhā //

Then, the learned mantrin, who has entered into concentration, should observe the colour, smell, noise and (the shape of) the flames (of the fire); and likewise, he should observe good and bad omens of the fire (25).

If the flame of the fire has one point, it brings about all kinds of happinesses; (the flame) which has two points, and is not trembling and blazing well, is known to be intermediate. If the flame has four points burning equally, it causes increase of welfare and makes fulfilment firm (26).

The fire which is (in colour) like a kunda-flower, smooth, and has beautiful splendour like vaidūrya⁵, which is without smoke and without dirt, brings about health and prosperity of the family (27). The fire which has the splendour of a moon-stone and is (white) like snow or hail or which is like a topaz (puṣparāga), annihilates

4 contd

of the Samvarodaya can be found in ch. 7 of the Chinese translation of the Amoghapaśa-kalparāja (Taishō No. 1029, Vol. 20, 260-b- 5 f.); in this case Agni is one-faced, three-eyed and four-armed; the mudrā in his first right hand is Abhaya; but his body-colour is white. Cf. B. Bhattacharyya: The Indian Buddhist Iconography, p. 362.

5

rūpa- of rūpavaidūryasuprabhāḥ is incomprehensible; tib. does not translate it. MSS ID rupya- 'has beautiful splendour like silver and vaidūrya' is not original.

all evils (28). The fire which looks like a bandhūka-flower or is like a javā-flower, which is like the colour of pure gold, brings about kingship and supremacy (29).

The fire which has the smell of a campaka-tree, a lotus, a blue lotus, (the root of) uśīra, a jasmin flower and white sandalwood, or the fire which has the smell of camphor or of an agaru-tree, makes (the donor) the supreme ruler of a pleasant place (30).

The fire which has the agreeable sound of a vīṇā, a flute, a mṛdaṅga-drum, a (trumpet of) conch-shell and a kāhala-drum, and which has a very deep sound, is considered to bring about happiness (31).

The fire which has the shape of a śrīvatsa (the mark of a curl of hair on the breast of Viṣṇu), a parasol, a conch-shell, a lotus, a trident or a jar, which has the shape of a banner, a chowrie, a sadvajra, a swastika, a horse or an elephant (32), the fire which is without noise and turns to the right, and is (of the shape of) one lump, gives great profit. (The fire which is) equipped with these auspicious omens brings about long life and health (33).

The flame which trembles and turns towards (the practiser), which has three points and much smoke, which is whirling, sparking, and is expanding, causes sickness (34). The fire which trembles repeatedly and which repeatedly laughs harshly, which repeatedly whirls to the left and which touches the ground repeatedly (35), the fire which is covered with black spots⁶ destroys certainly the family; in battle it brings about terror to kings and death to generals⁷ (36).

The fire which is colourless, of black colour like smoke, of dark colour and of variegated colour, which is unpleasant (to the sight), which is like palāśa and sesamum oil, destroys the desired profit (37).

6

tib. '(the fire which has) black spots and the colour of charcoal'; it is difficult to find a word corresponding to sol ba in the Skt. MSS.

7.

tib. 'it foretells that the army and the generals who attend on the king will be destroyed'. tib. rgyal po hi druñ suggests nrpañ carane; but it is difficult to find the original word for gnas pañ.

If the fire smells like a corpse or raw meat; if it is ill-smelling, and reeks of aquatic animals; it foretells the fall of the chief (38).

The fire which has a crackling or a fizzing sound, which is simmering or has the sound of vajra, destroys the profit (39). The fire (which is shaped) like a sword, an arrow, a spear or a snake, like a camel or a "cow-headed" (creature), and like whatsoever is terrifying, foretells a great terror (40).

(The practiser) should offer oblations (by pouring with ladles) twenty-one times; then, he should satisfy (Agni). (He should offer) flowers, tāmbūla, clothes and so on; he should make (him) well contented with hymns (41). Then, he should offer water for gargling; the mind of Agni will be completely satisfied (42).

Om bodhivṛkṣāya svāhā // (the mantra) of an aśvattha-tree.

Om vajralatāya svāhā // (the mantra) of a plakṣa-tree.

Om vajrayajñāya svāhā // (the mantra) of an udumbara-tree.

Om vajrakuberāya svāhā // (the mantra) of trees with milky juice.

Om sarvapāpadahanavajrāya svāhā // (the mantra) of sesamum seeds.

Om vajrapuṣṭaye svāhā // (the mantra) of entire grains.

Om sarvasāmpade svāhā // (the mantra) of coagulated milk and
boiled rice.

Om vajrayuṣe svāhā // (the mantra) of dūrva-grass.

Om apratihatavajrāya svāhā // (the mantra) of kuśa-grasses.

Then, (the practiser) should imagine the circle of the mandala developed from a mark and a seed-character, produced from the seed-character of his own (guardian-)deity, he should imagine this circle on the seat of the heart-lotus. Attracting the circle of wisdom (jñānacakra), he should make (it) enter into the circle of samaya (samayacakra) (43). And, in the middle of the heart of Agni, he should imagine the aspect of instantaneousness. He should offer water for sprinkling, water for gargling and so on, and should offer hymns, argha-water and water for washing feet (44).

He should perform (the rite of) homa without apprehension, reciting the seed-character of his own (guardian-)deity. He should offer (oblations) to deities one by one; afterwards, he should perform the burnt-sacrifice at pleasure (45). From twenty-one times up to one hundred or one thousand times, the wise man should perform the homa-offering according to the substances (to be burnt) (46). And likewise, he should offer all (kinds of) liquid food to the

mouth of Agni. He should offer, in due order, fuel and kuśa-grasses to the circles of rays (prabhāmaṇḍala), food and water for sipping and so on to the hands, flowers to the head, incense to the flame, perfume to the heart, sprinkling water to the body, water for washing feet to the feet, a lamp, argha-water and food in his presence (47). He should let the supreme maṇḍala go according to the ritual which has been told before (48).

If he should practise the supermundane homa after fulfilling the mundane homa, he should perform the mundane (homa) in daytime, and the supermundane (homa) at night (49). At an assembly of yoginīs and yogins (that is,) a "pleasure-feast", (he should offer,) above all, food and drink, the great kilikilā-pleasure and song and dance (to them) (50). At this very place, he should offer caru-gruel as a burnt-offering in the manner befitting his own guardian-deity; he should ask (them) for the object of his desire; he will attain fulfilment; there is no doubt about it (51).

"Om̐, by you, all the objects of the living beings have been accomplished through granting (them) suitable fulfilments. Go to the territory of the buddha. Dwell (there) as you please. O gods or living beings such as Brahman and so on⁸ (52)!" Having spoken thus three times, the practiser, in performing (the rite of) pacifying, prosperity and safety at the house of the donor, should make him ask pardon in the presence (of the deities) (53).

Now, I shall speak of the fruits which result from all the divisions of homa. The (sacrificial) ground increases landed property; the hearth-pit makes the house prosperous (54). Clarified butter brings about every (kind of) prosperity; fuel increases splendour; firewood increases heroism; kuśa-grass protects everything (55). White mustard pacifies (calamities); grains of rice are considered to increase welfare. Sesamum seed is known to destroy evil; corn brings grain and wealth (56). Beans produce great power; barley causes the velocity of the wind⁹. Dūrvā-grass increases the duration of life; wheat removes sickness (57).

8

vidhikriyā is impossible to translate in this context.

9

This word occurs, in different context, in ch. 9 (Vol. 2, 29-3-3) and ch. 45 (Vol. 2, 38-3-8, 38-4-2) of the Laghusaṁvara; but its meaning is not clear.

Honey and milk bring about prajñā-wisdom; coagulated milk and boiled rice grant all kinds of happinesses. Fire makes the desired object fulfilled; one's own guardian-deity grants liberation (58). Other things are known to effect the rites of pacifying and so on according to the (nature of) the rite. The pātri-ladle is prajñā-wisdom; the śruva-ladle is the means (upāya); the union of them is the practice of non-duality (59). Clarified butter poured from them is considered to be amṛta of the great wisdom; with it (the practiser) should satisfy Agni, whose essence is the whole world (60).

He who in this way carries out homa brings about fulfilment and good luck (for the donor) (61).'

Chapter twenty-three: explanation of homa.

CHAPTER XXVI. EXPLANATION OF SURĀ.

'Now, I shall explain according to prescription the brewing of (various kinds of) spirituous liquors, which is the secret of all tantras, and has not been told in other places (1).

I will tell the cause of the arising of the amṛta (the nectar); hear, O the king of yakṣas! The Mandara-mountain is named "diamond-like wisdom" (jñānavajra); the region of empty sky (khadhātu¹) is the ocean of milk (2). When the amṛta was being churned in the beautiful sea, the ocean of milk, the goddess Surā arose from it; she is a maiden who can assume any shape at will (3).

She is similar to the rising sun in hue and is as brilliant as the sap of lākṣā-grass. Her body is many-coloured (being adorned) with all (kinds of) jewels and her splendour resembles the colour of a lotus (4). She is a celestial maiden with eighteen arms and is like the origin of the character Maṃ². She is a goddess endowed with various rasas, and holds sovereignty over the three worlds (5).

She has in her right (hands) a sword, an arrow, a hook, a kapāla-vessel and a vajra-pestle, a banner, a necklace of pearls (tathāgata), likewise a bell, and ninthly, the Varapradā-finger-posture (6). And, in her left hands, (she has) a shield, a bow, a snare, a khaṭvāṅga-staff, and a jar, a spear and a mallet, a vīṇā-lute and the Ganayantī-finger-posture³ (7). She enjoys fresh youth, is three eyed and is a beautiful celestial maiden.

She, being churned by the Mandara-mountain, exists in everything that is (in the form of) flowing water⁴ (8). And, resembling clarified butter and honey, she runs into what is called the ocean of milk. And, this girl is (nothing but) soma-drink; in her body

1

It is to be noted that kha corresponds metaphorically to vajra.

2

tib. 'has the body originated from the character Maṃ'. A similar expression: mañ gi ye śes las byuñ bañi is found in ch. 28 of the Abhidhānottara (Vol. 2, 69-4-1); but the corresponding word cannot be found in the Skt. MSS.

3

tib. bgrañ phreñ 'a counting rosary'.

4

sarve nāḍībhūtāni madhyagā should be paraphrased as sarveṣāṃ nāḍībhūtānaṃ madhyagā; according to Pañj. it is to be translated as follows: 'she flows in the middle of all which have become rivers'.

resides Vajravairocanī (9). And, in the body of Vairocanī, Heruka is melted. This is the supreme pleasure (satsukha) of a multitude of dākinīs through the union with all the heroes (10). (Here,) everything has become one; (it is) the amṛta and is the goddess of dreadful appearance; it is the destroyer, the maker and the enjoyer; and so is the amṛta of her womb (11).

Kuṇḍa (the hearth-pit or a bowl to brew surā with) is said to be "the origin of dharma" (dharmodaya); the globular water-jar (golaka) is asserted to be the amṛta. Surās (spirituous liquors) are vajrayoginīs; and intoxication is Heruka (12). The colour (of surās) is Padmeśvara himself; the scent is Ratnasāmbhava. The taste is indeed Amoghasiddhi; and the vehemence is the wind itself (13). How can there be sacred knowledge (jñāna) for a man who is without intoxication; or how can there be worldly knowledge (viññāna) (for him)? (The amṛta which is) fully equipped with sacred and worldly knowledge makes the world confused through intoxication⁵ (14).

When an assembly of worshippers and those who are to be worshipped is held at a pīṭha, a kṣetra, a chandoha, a melāpaka or a śmaśāna, the amṛta is the supreme offering (argha) (15). As is told in each tantra, in the case of a good omen, in pleasure and happiness, among deceased ancestors (pitr), gods and human beings, in marriage, in sacrifice (16), in the sacrifices of sages, in the fighting of kṣatriyas, in the seeking after happiness and profit on the part of vaiśyas, and in the attaining of fulfilments by śūdras (17), when (a man is) honoured (for following) the life of a beggar, when one is preaching a long sermon, performing consecration and homa-sacrifice and wandering about pīṭhas (18), in the interpretation of omens and in worshipping yoginīs, at the moment of accomplishing (the recitation of) mantras, in (those) many cases which are to be known, there is no fault with him (who drinks the amṛta) (19).

5

tib. and Pañj. seem to accord with MS A vyāmohitaṃ; 'the world which is fully equipped with jñāna and viññāna is confused by intoxication'.

I shall tell you who possesses authority; hear, O ruler of guhyakas! (A practiser) should honour the master or the hero with a yoginī⁶. Afterwards, he should cause (him) to eat (the amṛta) (20). He should always cause (him) to consecrate (the spirituous liquor) with the mantra Om āḥ hūm. He should cause (him) to make (the spirituous liquor) purified and known with the mantra Ha ho hrīḥ (21). The syllable Ha removes the colour; the syllable Ho destroys the scent; and the syllable Hrīḥ kills the energy; (the practiser) should take (the spirituous liquor) in the guise of the amṛta (22).

If a consecrated man (dīkṣita)⁷ should drink (it) without the three deities and so on⁸, it will undoubtedly be poisonous for him; the mantra will not be fulfilled (23). If a man is perturbed by intoxication, there will be many obstacles (for him). A practiser of mantra (mantrin), being perverted by intoxication, is seized by Kāma and takes pleasure in the sexual act (24). He dances and laughs; he is intent on quarrel and is confused; he blames or he hurts (other people); he is boiled in the Raurava hell (25). The yoginī becomes utterly furious (with him); he, the evil-minded man, wanders in hell, terrible with plagues and sorrow⁹, where terrifying (devils) run in different directions¹⁰ (26).

If a man blames his master, menaces his master, hurts people and does not give alms, then, the amṛta turns into poison; and the practice (to obtain) fulfilment is fruitless (27). The

6

Pañj. bla ma dpaḥ bo rnal hbyor ma shes pa bla ma daṅ dpaḥ bo daṅ rnal hbyor ma rnams so (Vol. 51, 110-4-1) suggests '(a practiser) should honour the master, the hero and the yoginī'; but yoginyā should be taken as a sociative instrumental 'the hero accompanied by a yoginī'.

7

tib. dam tshig can shows that dīkṣita can be an equivalent of samayin.

8

Pañj. "'the three deities and so on" means the character Om and so on which are of the essence of Vairocana, Amitābha and Akṣobhya' (Vol. 51, 111-4-5 f.).

9

It is also possible to translate vyādhiśokabhayaṃ tatra as 'where there are plague, sorrow and terror'.

10

For vidravanti, tib. gives rnam gtseṣ nas 'terrifying (devils) persecute (him)'.

practiser of mantra should abstain from those (vices) which have been declared by the former buddhas; he should eat caru (rice-gruel) which is prescribed in the ritual and is connected with (other) food for offering (naivedya) (28).

At an assembly of yogins and yoginīs, he should not go away from that which is told in the ritual. As everything is common to all, he should not discriminate between good fortune and bad fortune (29). So, that which is called "uniting" (melāpaka), fulfilment and command are obtained (there). Prajñā-wisdom which brings about intelligence and power, happiness, welfare and fruit (is obtained).¹¹ Supremacy, the supreme fruit (which is endowed with) all the eight good qualities, is obtained (30).

(Spirituous liquors) arisen on the surface of the earth are "born from dravya" (dravyajā), born from a root (mūlajā), gaudī, (born from) flour, born from honey, born from trees and born from sugar (31). Mādhvī-liquor is said to be of five kinds; paiṣṭī is considered to be of eight kinds; gaudī is of seven kinds; they are to be counted in this way (32).

They are produced in various districts; but the name madhya (intoxicating liquor) exists (in common). They are hot, bitter, sharp, sweet and smooth (33). (Kings of serpents such as) Ananta, Vāsuki and Varuṇa are to be imagined as the abode (of liquors). Offering flowers, guggulu-incense and food, (the practiser) should undertake (the rite). When he has completed the rite, the supreme Varuṇī (the goddess of spirituous liquor or spirituous liquor itself) arises (34).

If he thinks about sadyāsava ("daily liquor"), he should have it made every day. It is heavenly, the best practice; sadyāsava is pleasant (35). Taking one karṣa of śigru-horse-radish, ten karṣas of āmalaka fruit, one prastha of water, sixty-three (karṣas of) black pepper and one pala of molasses, he should put (them) together; this is called sadyāsava and is brought to maturity by the rays of the sun. This is āmalaka-liquor (36, 37).

11

tib. suggests that this line can be translated as 'prajñā-wisdom which brings about the fruits of intelligence, power, happiness and welfare'.

Getting flowers of dhātakī, flowers of the mango tree, grain, malaya together¹² with śāriva, rock-salt and the bark of śrīgu-tree together, he should prepare (a mixture) with a quarter of them of equal share (38). And, he should add thirty-two (palas of) water and eight palas of molasses; it is known that the spirituous liquor arises after three days. This is dhātakī-liquor (39).

He should get pattraka, marica-pepper, mañjisthā-grass, nāgakeśara, likewise dāḍima, vāla, cloves together with māgadha-pepper (40), and add one pala of molasses and seven (palas of) water, (thus) āsava-liquor arises which has cool fragrance and is clear and cold. This is pattraka-liquor (41).

A wise man should put together cinnamon, cardamon, spikenard (nalada), cakra, tanāla and cārupādika along with śarkarā and stir them up; when they are heated seven times by the rays of the sun, there arises the best sadyāsava. This is śarkarā-liquor (42).

A wise man should add one eighth of the water extracted from the root of horse-radish and mixed with honey to the substance (vastu) yet to be purified¹³ (43). He should boil the remaining honey (madhu), and then, he should churn it; (he should add) the three fruits, kuṅkuma, musk, camphor, pattraka and aguru (to it) (44). A hundredth part of every (component) should be mixed with that which is to be churned (vedhayārtha). Putting it into grain, he should quite specifically leave it as it is for four days (45); thus being brought to maturity, medhavin-liquor and his own liquor (svāsava) will come to have (the fragrance of) musk.

He should add śobhañjana, chāgala, honey of four times as much (46), two kinds of tuhina-camphor and musk combined with nutmeg,

12

As is suggested by Pañj., it is possible to take krānta as the name of a kind of plant; then, this pāda should be 'malaya, śāriva (= śāriva?) and krānta'. Pañj. kra nta shes pa khyab hjug kra nta ste / legs mthoñ shes hgañ shig go // 'krānta is viṣṇukrānta; some one says it is sudarsana (Coculus Tomentatus; the word corresponding to legs mthoñ in verse 42 is cakra)'.

13

tib. 'A wise man should divide the water extracted from the root of horse-radish and mixed with honey into eight parts in order to purify the substance (vastu)'; this verse is syntactically so equivocal that it is difficult to judge whether or not the Tibetan translation is correct.

and that which is equal to musk (to it); (thus) madira-liquor becomes beautiful (47). Furthermore, leaving a quarter of what is thus done as a remnant for the sake of its own nature, (he should add) one half-pala of flowers of dhātākī along with honey (to it) (48), and stir it one hundred times with one half-pala of a fragrant substance; with this thus accomplished, he should practise every month (49).

Knowing the distinction between the various kinds of spirituous liquors, a man can be fit for the situation; and distinction of those spirituous liquors should be known in each tantra (50).

Without the drinking of intoxicating liquors, worshipping (cannot be performed, just as) without clarified butter, homa-sacrifice (cannot be performed). Without the right master, there is no teaching; without teaching, liberation is not realized (51). There can be no Samaya (ritual food) other than spirituous liquor; a man who has satisfied the master attains it through the power of his own merit (52).'

Chapter twenty-six: explanation of Sura.

CHAPTER XXVIII. THE RITUAL OF HOMA.

'Now, I will explain rites of homa-offering individually.

The practiser should recite the mantra ten thousand times on behalf of the king.¹ He should begin the rite of homa-offering according to the ritual as told before (1). "Great meat" (mahamāṃsa, human flesh) intertwined with the name of the sādhya (i.e. the king for whom the rite is carried out) he should mix with milk and sacrifice it without imagining anything; (the sādhya) will come to possess a complete royal camp² (2).

(The practiser) should offer the supreme oblation of flesh of an ox, a man and a jackal (to the fire); mingling intoxicating liquor and milk (with the flesh), he should sacrifice it one hundred thousand times; (the king) will obtain an excellent city and govern it with great majesty (3).

³(The practiser) should sacrifice a human bone together with poison, blood and pungent oil, and should burn it in the Kaṇṭaka-fire together with chaff and hair (4). In the case of a fierce rite, the practiser of mantra, filled with wrath, with loose hair, naked, facing the south and clad in a black upper-garment, should with concentrated mind sacrifice in the Caṇḍāla-fire in the daytime (or) at midnight (5). He should utter (the mantra) connected with the name of the sādhya with dreadful roarings; since even the king together with his guards

1

tib. rygal srid ched du suggests rājyahetor 'for the sake of kingship'. This reading can be confirmed by MS B which possibly reads rājaheto; e and ya are orthographically interchangeable. See J. Brough, *op.cit.* p.354.

2

tib. '(the sādhya) will become a perfect king' gives the impression of being a free translation. This pada should be paraphrased as (sādhya) sāmpurnasakatakatvaṃ bhavet 'the state of possessing a complete royal camp will be realized (to the sādhya)'.

3

A passage similar to the following seven lines occurs in ch. 2 of the Herukābhyudaya (Vol. 2, 227-3-4 f.); the first five lines accord with the Saṃvarodaya and the last two lines are as follows: shags kyi mthah ni miñ dañ sbyar // nus pa grol shiñ myur du hgug // stobs ldan sde dañ bcas pa ni // mñon spyod kyis ni gsad par bya // '(He should utter) the mantra to the end of which the name (of the sādhya) is connected; (the sādhya, with his) strength gone, will be instantly attracted. (Even the king) who has power and is equipped with an army will be killed through the rite of subjugation'.

and army⁴ is destroyed, it is needless to speak of other people (6).

Likewise, I will explain the rite of expelling enemies who are proud of their power.⁵ (The practiser) who has bathed in the melted fat of crows' wings and oil from the milk of the nimba-tree, (the practiser) whose face is directed to the direction of the wind (north-west), who has kindled the Piśāca-fire, will undoubtedly expel (the enemies) through the rite (which lasts for) seven nights (7, 8).

⁶That which is called the rite of causing hostility (is as follows): (the practiser) who knows mantras should sacrifice nests of crows and owls mixed with sloughs together with leaves of the nimba-tree in the fire of a thorn-apple plant one hundred and eight times; (the sādhya) will be hated by the whole world and deserted by his friends and relatives (9, 10).

Now, I will explain the rite of attracting. With his face turned to the direction of the wind (north-west), and with the upper half of his body naked, (the practiser) should imagine the sādhya to be encompassed by a splendour similar to red lead and should seize him (who is) shaking (11). Throwing about his hands and sitting on the seat, (the practiser) should pierce the heart-lotus of the sādhya by means of a rope and a hook, and recite the mantra of the syllable Jah (12). After having pierced the kamalas (lotus) of women, he will certainly subdue the three worlds.

Or drawing the body of the sādhya on a bowl of a human skull, which consists of one piece (ekakhandā),⁷ which is without rents

4

tib. dpun bcas stobs is a literal translation of sasainyabala; the expression stobs ldan sde dan bcas pa found in the Herukabhyudaya (see n. 3) may be a translation of the same Sanskrit expression.

5

A line identical to this occurs in ch. 36 of the Herukabhyudaya (Vol. 2, 231-3-7).

6

A passage identical to the following two verses can be found in ch. 21 of the Herukabhyudaya (Vol. 2, 227-4-1 f.).

7

This expression occurs also in ch. 23 of the Herukabhyudaya (Vol. 2, 228-1-1). A similar expression dum gcig occurs in ch. 2 of the Laghusaṃvara and the corresponding chapter of the Abhidhānottara (ch. 49, Vol. 2, 79-5-6). Skt. MSS of the latter belonging to the University of Tokyo give ekakhandaka (ch. 46 of No. 173, 154a-3, ch. 48 of No. 474, 181b-1).

and beautiful, he should sacrifice oleander and firewood of the thorn-apple plant mixed with blood (to it) while uttering the name of the sādhya (13, 14). (The practiser) should draw the figure of the sādhya on birch-bark with the bile-yellow of a cow and with his own blood; covering (the image⁸ of) the sādhya with a cloth, he recites a mantra and sacrifices (15). (The practiser) whose body is puffed up by the mantra, should sacrifice for seven days while taking flowers one by one; (thus) he attracts whomsoever he wishes (16).

Furthermore, I shall explain another matter: (the practiser,) making an effigy from a timber of red sandalwood and writing the name (of the sādhya) with his own blood and the bile-yellow of a cow, should put (it) on the heart of (the effigy of) the sādhya (17). He whose body is smeared with the three spices should pierce the heart, the navel and the private parts of the sādhya with a copper needle;⁹ thus piercing the three places, he attracts whomever he wishes at midnight (18).

(The practiser,) drawing a bhaga with red chalk of golden colour and putting the left hand on it, should recite (the mantra) eight hundred times. The man, whose name (the practiser) pronounces while reciting the mantra, will arrive at the very moment (19).

Taking a leaf whirled (by the wind), (the practiser) should write the name of the sādhya. Writing it with tears and a feather of a crow,¹⁰ he should throw it to a high "wind-passage"; he expels (the enemy) at the very moment (20).

Making a stake of six aṅgulas from the bone of a monkey and charming it seven times by reciting a mantra, (the practiser) should burn it at the gate of a person; his lineage will become extinct (21).¹¹ If it is buried near cows, elephants, horses, asses, camels and buffaloes, they will perish (22).

8

sādhya 'pi (= sādhya api c.m.) obviously means 'the image of sādhya'. cf. Pāṇj. Vol. 51, 111-5-3.

9

A similar rite of attracting with the help of three spices, a copper needle and so on, is mentioned in ch. 45 of the Laghusaṁvara (Vol. 2, 38-3-2 f.).

10

This expression occurs in ch. 24 of the Herukābhyudaya (Vol. 2, 226-3-5).

11

A verse identical to this occurs in ch. 33 of the Herukābhyudaya (Vol. 2, 230-5-1).

Catching "clothes of a preta" (pretavastra¹²) before they drop (on the ground) and (smearing them) with human oil, (the practiser) should put them in lampblack. On the fourteenth day of the dark half of a month, he should set them on fire in a lamp stand made of lead and recite the hrdayamantra, above all. A man to whom (this) collyrium is applied will see all the dākinīs (23).

Om bhūtaliṅge svāhā //

This is the mantra of wiping off suffering from erysipelas (visarpa) (24).

Taking a carapace of a turtle and collecting excrement of an elephant, (the practiser) should fumigate a house (with them); by it, bugs will certainly become extinct (25).

Om udake maśaka jāta udakasambhavas teṣaṁ tuṇḍaṇ ca pakṣaṇ ca indro bandhati mahābalaḥ maśaka indrapaśabaddha indravaśagata gacchante sūryodaya svāhā // (Om, mosquitoes are born in the water; they arise from the water. Indra of great power binds their bills and wings. Mosquitoes are bound by the Indra-net and are subdued by Indra. O sunrise! svāhā.)

Taking clods of earth at a cross-road and charming them twenty-one times (by reciting the mantra), (the practiser) should throw them to the four directions (26). (Thus,) keeping off mosquitoes, people become comfortable; through comfort they attain dharma; through dharma there will be "the Supreme" (anuttara) (27).¹

Chapter twenty-eight: the ritual of homa.

¹²

The word pretavastra is found in ch. 21 of the Abhidhānottara (Vol. 2, 64-5-1); but it is not clear what it actually means.

CHAPTER XXXI. EXPLANATION OF THE FOUR KINDS OF YOGINIS,
THE ARRANGEMENT OF THE FOUR CAKRAS AND THE
TRANSFORMATION OF THE BODHI-MIND.

'Now, I shall explain the beautiful characteristics of yoginīs.

Dakinīs are (women called) padminīs, lāmās, and hastinīs (1).
Śaṅkhinīs, khaṇḍarohās and citrinīs are rūpinīs. A wise man should
observe the characteristics of (the women) of the four (following)
classes (2).

I shall explain the characteristics of a padminī: her face
is of round shape; the nose has the form of a sesamum-flower. The
nails are of the colour of copper; the back is like (that of) a
turtle; and her feet are flat (3). Both breasts are of the shape
of tāla-fruits; and her hairs are curled.¹ There are three
wrinkles of good fortune² (over her navel); her breast is very
beautiful (4). She walks like a rutting elephant; she has the
scent of a lotus and the voice of a goose. (The yogin) should
love her by the "lotus-embrace"; she is like a lotus to the touch
(5). Grasping her hair with his hand, he should press her lips
with his teeth. He should insert a finger into the bhaga; thus
he should love a padminī (I) (6).

Next, I shall tell the characteristics of a hastinī. She
smells of liquor; her shanks are stout; she has a round nose and
a line of hair (above the navel) (7). She is mad with passion;
her body is stout; she moves to and fro; (the yogin) should make
her sport amorously by the "chest-opening-embrace" (urāḥspṛṣṭabandha);
she is like a pill to the touch (8). (The yogin) should make the
hair of her head bristle; he should embrace her tightly and crush
her breasts. He should touch her with the mouth and press her
with his finger-nail; the wise man should draw her near with his

1

The reconstruction romāvartālā is provisional. romāvartālī is
also possible; this seems to be a contamination of romāvalī and
romāvartā. tib. ba spu hkhil ba 'the hair on her body is curled'
as occurs also in verse 7 where the Sanskrit word corresponding
to this is romāvalī.

2

trivalī bhagabhūtanam is to be paraphrased as trivalī bhagabhūtā.
tib. khro gner gsum can skye gnas mchog 'she has three wrinkles
on the forehead and (her) bhaga is the most excellent' is untenable.

finger-nails (9). A hastinī has the voice of a crane and is pleased with songs and instrumental music. A woman who possesses those characteristics is known to be a hastinī (II) (10).

Now, a śaṅkhinī will be described: she has long hair and a long nose; she is neither too thin nor too fat; her breasts are of the shape of orange-fruits; she enjoys eating curds and milk (11). Grasping her hair with the left hand in sexual passion, (the yogin) should press her lips with his teeth. With vehement pleasure, having kissed her he should strike her breast with his finger-nails (12). A śaṅkhinī smells like a donkey and is rough to the touch like the tongue of a cow; she has the voice of a crow. A woman who possesses those characteristics is always said to be a śaṅkhinī (III) (13).

And, a citrinī is described thus: her body is very short; but her breast is beautiful; her breasts are of the shape of śrīphalas. She has abandoned shame and is very wrathful; she always takes pleasure in quarreling (14). Her shanks are crippled; and she lies on her back. She has a hanging under-lip and the voice of a turtle dove. A citrinī, who smells of meat and has her arms spread out, is said to be sporting in amorous enjoyment (in the following way) (15): (The yogin) should at first press her bhaga with his hand; kissing, crushing the breasts and bristling the hair of her head and with restraint embracing her tightly in love, he should cause (her) to taste his own lips (16). A citrinī who possesses those characteristics of sexual love³ (told) in verses and kāvya is a (kind of) rūpinī (IV) (17).

Now, I shall explain the characteristic of the division of the transference (saṅkrānti). The outward transference is gross; and the inward (transference) is considered to be subtle (18).

⁴In the Mahasukha-cakra (which is situated) in the head, there exists a subtle lotus of four petals; as it assumes the form of the

3

tib. omits śuci (sexual love).

4

The following nine lines are quoted in Dasgupta: An Introduction to Tāntric Buddhism, p. 148 f., p. 149, f.n. 1. His reconstruction and interpretation are sometimes different from ours.

support of everything, it is the "place of intoxication"⁵ (madasthāna) (19). Its essence is the "seat of enlightenment" (bodhimāṇḍa); and it is the seed. Outside (of it) is a lotus of thirty-two petals; and in the middle (of it) is the character Ha, which flows downwards (20). It (i.e. the lotus) is of the essence of the bodhi-mind (bodhicitta) and is the moon which consists of fifteen digits (kālā); it always conveys the great pleasure (mahāsukha). The yoginī is the sixteenth digit of the moon⁶ (21). To either side of her are lalana and rasana; she is of the nature of ālī and kālī. She is formed of the four (kinds of) joy in the form of (both) cause and result (22). Her nature is the innate joy (sahajānanda), she is non-dual, and is the supreme female-lord. In the conventional truth, she is like a kunda-flower, and, in the absolute truth, she is woman in the form of pleasure. She is the support of buddhas and bodhisattvas, the "holder of vajra" (23).

⁷In the Sambhoga-cakra (which is situated) in the throat, there is a red lotus of sixteen petals; in the middle of it is the character Om; above it, amṛta flows down incessantly through the way of the "hole of the uvula" (ghantikārandhra) (24).

In the heart, there is the Dharma-cakra, a lotus of variegated colour⁸ with eight petals; in the middle of it is situated the character Hum facing downwards. Above it is a minute lotus in a form like "Brahma's egg"⁹ (25). In the middle of it is consciousness

⁵

tib. byañ chub sems kyi gnas (bodhicittasthāna) is not confirmed by the Skt. MSS.

⁶

Dasgupta translates "yoginī ṣoḍaśī kālā" as "Inside is the Yoginī of sixteen kalās or digits of the moon". This is not impossible if ṣoḍaśī is thought to be used in the meaning of ṣoḍaśa for metrical reasons; in this case kalāḥ is preferable to kālā, but it is not confirmed by MSS except MS L which possibly reads kalāḥ.

⁷

The following seven verses are quoted in Dasgupta, *ibid.* p. 149 f.; his quotation is not faithful to the text.

⁸

Dasgupta thinks the meaning of viśva-padma to be "the double lotus one facing upwards and the other facing downwards", *ibid.* p. 149.

⁹

Dasgupta translates this line as "a little above there is a white lotus, representing the universe (brahmāṇḍasadrśākaram)". *ibid.* p. 149.

(viññāna); it is ever-risen and all-pervading; it is the self-produced wisdom and is the receptacle¹⁰; (this) consciousness is the supreme lord (26).

In the navel, there is a blue lotus of sixty-four petals.¹¹ In the middle of it is the character Am, which shines like a jewel (27). Below it are seventy-two thousand minute lotuses, the "place of knot" (kandasthāna); (and that blue lotus) should be founded on (them); "knot" (kanda) means "receptacle" (ādhāra) (28). (On it) are situated lalana in the form of prajñā-wisdom and rasana (in the form of) upāya (means); the character Am existing in the middle of both (lalana and rasana) is the goddess appearing in various forms¹² (29). (She is) the goddess who has the nature of the four bodies (of buddha). She confers all fulfilments and brings the great pleasure (mahāsukha) to everybody; I always salute (her) properly (30). The goddess becomes identical with whatever existence, to which people's mind is directed; she is like a (wishing-)gem which assumes various forms (31).

By exciting the fire of prajñā-wisdom which was increased by investigating the village of existence, Candālī¹³ is kindled; it is nothing but the right knowledge which is pure and spreads brilliance. When the imaginary ideas (as to the five) skandhas are burnt, there

10

tib. rañ byuñ ye śes kyi ni rten suggests svayambhūjñāna-m-ādhāra (= svayambhūjñānadhāra) 'it is the receptacle of the self-produced wisdom'. Dasgupta: "it is the receptacle of all, and the source of all self-produced knowledge (svayambhūjñānadhāra)". op.cit.p.149.

11

In the 6th kalpa of the Caturyoginī-saṃputa, there occurs the following passage: lte bar gnas pañi hkhor lo chos // hdab ma drug ldan // śes rab gnas su rab tu gsuñs // zla bañi gzugs bshin gsal ba ste // de yi dbus su gnas pa dag // me lta bur ni hbar ba yin // 'the cakra which exists in the navel is dharma(-cakra); it is equipped with sixty-four petals. This is said to be the residence of prajñā-wisdom. This is as bright as the figure of the moon; those which exist in the middle of it burn like fire'. (Vol. 2, 244-4-8 f.). This shows that the system on which the Caturyoginī-saṃputa relies is different from that of the Saṃvarodaya. In the latter, the dharma-cakra, which is the eight-petaled lotus of variegated colour, exists in the heart.

12

Dasgupta translates devī ... viśvarūpinī as "the Goddess in the form of the universe". ibid, p. 149.

13

With regard to the doctrine of Candālī, everything is yet to be studied. See Tsoñ kha pa, op.cit.Vol. 5-4-5 f.; Hevajra, I, i, 31.

arises the right perception without support; it pervades the sky; if effects the sameness of all things and is immortal (32).

Now, I shall explain the transference in the form of a "dot" (bindu, the mark representing the anusvāra) beginning from the first day of the light half of a month up to the day of full moon (33). On the first day of the light half of a month, there is the character A on the thumb; on the second day, the character Ā on the shank; on the third day, the character I on the thigh; on the fourth day, the character ī on the yonī; on the fifth day, the character U on the navel; on the sixth day, the character ū on the heart; on the seventh day, the character R on the breast; on the eighth day, the character Ṛ on the throat; on the ninth day, the character L on the palm of the hand; on the tenth day, the character l̄ on the cheek; on the eleventh day, the character E on the eye; on the twelfth day, the character AI on the root of the ear; on the thirteenth day, the character O on the forehead; on the fourteenth day, the character AU on the top of the head; and on the day of full moon, there is (the goddess) who has the nature of the character Aṁ and Aḥ left and right of mada¹⁴ (34).

In the same manner, there is the transference beginning from the first day of the dark half of a month up to the day of new moon. On the left, there is the moon (which is) āli and of subtle nature; on the right is the sun, kāli and of gross nature (35).

According to the division of the nature of the bodhi-mind, transference (saṁkramaṇa) has sixteen (stages); according to the division of passage of (every) half yāma, transference (saṁkrānti) has sixteen (stages) (36). The eclipse of the moon and the eclipse of the sun are (respectively) the destruction of the "dot" (bindu) and the destruction of the "sky" (the mark representing the visarga). Transference (saṁkrānti) equipped with them is known (to have) sixteen stages (37).

The great pleasure (mahāsukha) without imagination is the desire in the form of wisdom; it is joy (ānanda), the gate of the house of pleasure, and is comparable to the threshold of a door (38).'

Chapter thirty-one: explanation of the four kinds of yoginīs, the arrangement of the four cakras and the transference of the bodhi-mind.

14

tib. spyi gtsug (= murdhan) is not confirmed by MSS.

CHAPTER XXXIII.

'Now, I shall explain the saṃvara of fulfilment (siddhisamvara) (from which) wisdom appears.

Various upāyas (means) of methods (naya) are the supreme cause of fulfilments (1). The body (or "the lump"),¹ equipped with outside and inside, is as pure as the sky; thus, a man whose soul is liberated always looks on himself as like the sky (2).

It does not have a body; it is without beginning and without end, and is exempt from attributes such as sound and others. It is free from a second; still it exists in every way (3).

It, being non-existence, relies on existence and causes existence; it is without basis.² While being without intellect, it is conscious; still it does not think anything at all (4).

(The practiser,) making the seat firm, should make the limbs of the master unite (with it).³ He should imagine the mind to be of the same taste; and likewise, he should imagine it to be equal in aspect to the sky (5). It is free from "meditation" (dhyāna) and concentration (dhāraṇā), and is exempt from yoga and speculation (tarka). When mind (citta) and thought (cetas) have become firm, it will lead people to the course of suchness (tathatānaya) (6).

It is similar to the sky and abides in the sky; it is like clear crystal. (Its) form is without beginning and without end; it is not phenomenal (niṣprapañca) and does not have sense organs (7).

It is without transformations and appearances; it is completely void (sarvaśūnya) and is free from illness. It is the lamp of the world; it destroys the bond of existence; and it cannot be spoken of by human voices (8).

1

As is suggested by Ratnarakṣita, the following passages mention saṃvara or tattva (Pañj. Vol. 51, 118-3-1 f.). For this reason, pinḍa which is usually a masculine occurs here as a neuter.

2

The following four lines are quoted in Bu ston's Maṇḍala-vidhi as an explanation of the fourth-consecration (caturthābhiṣeka) (JA 594-3 f.).

3

The meaning of this line is not clear. tib. stan la gnas nas bla ma yi // brgyud par brtan par byas nas ni // 'sitting on the seat and making firm in the lineage of the master (?)' and the quotation by Bu ston (see note 2) bstan la gnas byas bla ma yi // drin gyis yañ dag sbyañ bar bya // 'abiding in the teaching (śāsane, or 'sitting on the seat' if bstan is a mistake for stan), he should be purified completely through the benefit of the master' is not confirmed by MSS.

Nor is it within the range of mind; it is without illness and is free from duality. I salute the truth (tattva), the imperishable, which brings about liberation in the true sense of the word (9); because, when truth (tattva) is touched, there exists thought of everything through thoughtlessness; when there is thought through thoughtlessness, then, there is unthinkableness (acintyata) (10).

As living beings are, so is thought (cinta); and as thought is, so jinās (the victors) are.⁴ Thus, this thought was shown by the buddha who himself does not think (11). For a man who does not think about thought, all thoughts disappear. It is the great pleasure (mahasukha) (which is) without attachment and without superimposing various (kinds of) superimpositions (12).

It is the most excellent of all aspects; it is completely without aspect and is beyond (the range of) sense organs. It is of the nature of existence and non-existence; it is exempt from existence and non-existence (13).

It is to be known introspectively as it is not senseless; it is neither a knower nor a seer. It is not immovable as it does not have form; it is eternal as it is not transformed (14).

As dharmas are without their own nature, why can there be rejection or adoption (of them)? (There is no) rejection or adoption in case of all the dharmas as in the dream (15).

The thorough perception of joy is the supreme prajña-paramitā (prajña-wisdom as a supreme goodness). (The state of) abiding in the fruit of joy is enlightenment, essencelessness (16). The pleasure (caused by the) ardent, undivided (union) of the two is nothing but the great pleasure (mahasukha); distinction of prajña-wisdom and karuṇā (compassion) is like (that of) a lamp and (its) light (17). These two are of (one,) undivided essence;⁵ they appear in the form of one mind. It is caused by the union of prajña-wisdom and upāya (means); and it effects the complete enlightenment (18).

That which is (the state of) Vajrasattva abiding in the recognition of the undivided aspect (of it) is the highest dwelling of all the buddhas (19).

4

tib. suggests yathā sattvās tathācintā yathācintā tathā jināḥ; but this is not very likely from the context.

5

It is also possible to reconstruct this pāda as idaṁ dvaya-m-abhinnātma 'It is of the essence of (these) two (united) undividedly'.

As long as the materials of pleasure (sukhasaṃbhāra), which are the causes produced from sport,⁶ exist, the yoing, while enjoying (it), completes (those) materials (20). As a man, who, at hundreds of creations created by illusion, knows them as they are and observes the whole to be the sameness of affliction and delight, as such a man is without fear for hundreds of terrible beings as well as for the occurrence of pleasure, so is the yogin whose nature has attained suchness (tathatā) (21).

Ah! the three worlds are filled with splendour of the great pleasure (mahāsukha). Ah! it awakens everyone who is swollen by the rainfall of calm pleasure⁷ (22). Ah! happiness! great happiness! Ah! enjoy (it) by all means. Ah! the great majesty of "the innate" (sahaja), for being the essence of every dharma (23).

The world appears as reflections of the moon on (the surface of) water; those which have occurred are heard like echo; those which are collected⁸ are seen like a mirage in the desert; food and drink are similar to the sky (24). (Smell) is smelt like the smell of the "sky-flower" (nabhakusuma); the mind follows the courses of the moon and the sun; those who abide are like Mt. Sumeru; and the object of the senses (ālambana) is like a girl in a dream (25). (People) exist only in ordinary practices (vyavahāra) (which are) like illusion or the "net of Indra". As (mentioned) above, so arises the innate pleasure (sahajānanda). It is exempt from the nature of existence; its form is unthinkable. It is always produced; it is the best of the ways of the sugata; salutation (to it) (26)!

⁹(A man,) abandoning all (other) worships, should undertake the worship of the master; when he is satisfied, the highest wisdom of the omniscient (sarvajñajñāna) is attained (27). What merit cannot be obtained? or whatever penance cannot be performed through the highest worship of the teacher (ācārya) who is (identical with) Vajrasattva (28)?

6

Very likely 'the causes which bring about the origin of sport'.

7

tib. '(For him) there is no terrible being and there is no occurrence of pleasure either' is a free translation.

8

This translation of saṃcitāḥ is provisional; tib. sems kyañ mya ñan which corresponds to this word is incomprehensible.

9

The following two verses are identical to Pañcakrama, IV, 45 and 46.

To a man who has abandoned fear and sin, who is virtuous, and who protects the practice of samaya, (the teacher) will explain the method (krama) (29). By reading, reciting and writing the Śrīherukābhidhāna-tantra, a man will attain fulfilment, supernatural abilities, happiness and the state of a bodhisattva (30). The great enjoyment or the great happiness of the Śrīsaṃvarodaya-tantra, (that is,) the saṃvara of a multitude of dākinīs united with all the heroes, when it is imagined and considered, annihilates the suffering of poverty (31).

Living beings of various aspirations are awakened by various practices; they are instructed through the means (upāya) of (living beings) to be trained in various (kinds of) courses (32). Even when they are not devoted to the instruction of the profound teaching, they should not be rejected; the essence of all dharmas is unthinkable (33).

The unthinkable play of the buddha (in which) voidness (śūnyatā) and compassion (karuṇā) are undivided depends on the host of dākinīs in union with Śrīheruka (34); and it liberates living beings through incarnations. There, living beings rejoice at all times and abide in the state of Śrīheruka united with all the dākinīs (35).'

Thus ended the thirty-third chapter of the Śrīsaṃvarodaya-tantrarāja, (alias the) Sarvayoginīrahasya, which is effective on being merely recited, the Sahajodaya-kalpa extracted from the three hundred thousand verses of the Śrīherukābhidhāna-mahātantrarāja.

VOCABULARY

SANSKRIT - TIBETAN

Figures connected by a dash (-) indicate the number of the chapter and the verse in which a word appears. If the word appears frequently in a chapter, only the number of the chapter is shown.
